About the National Women’s Health Information Center

**Why a National Women’s Health Information Center?**

Have you ever felt that the “age of information” was turning into the “age of confusion”? Now that we have an information superhighway, it seems jammed with health advice. Sometimes you get gridlock, where one piece of information contradicts another or doesn’t make sense. Or, maybe you can’t find information on the topic you want.

The National Women’s Health Information Center (NWHIC) is here to help! It provides a toll-free phone service (800-994-WOMAN (9662); TDD 888-220-5446) that is staffed by English and Spanish-speaking information specialists from 9 a.m. to 6 p.m. (EST), Monday through Friday, excluding federal holidays. This phone service also serves as a *Breastfeeding Helpline* to help you with common breastfeeding issues and challenges.

The NWHIC also has a web site (www.4woman.gov) with direct links to information sources, news clippings that are updated five days a week, a calendar of women’s health events, statistics on women’s health, special women’s issues like pregnancy, minority women, and disabilities, and much more.

**What’s the difference between the National Women’s Health Information Center and other women’s health information web sites?**

The NWHIC is entirely sponsored by the federal government. It is a service of the Office on Women’s Health within the U.S. Department of Health and Human Services. This means that it does not represent any special commercial interest, and it’s not trying to sell you anything. NWHIC is simply here to help you get information you can trust on a wide variety of women’s health issues. And it’s **FREE**.
Introduction

This guide to staying healthy is brought to you by the National Women’s Health Information Center (NWHIC) because we understand women’s needs for quick, trustworthy information to help their constantly growing, changing and beautiful bodies and minds. Women’s health needs nurturing to live long and well throughout the years. But nurturing your health requires a holistic approach throughout the “health span”— quality years in addition to the number of years. This approach to life-long health begins with healthy behaviors to prevent and manage the multitude of health conditions that can affect you. Although there are genetic risks that you cannot control for many diseases, there are risks that you can overcome by following key preventive steps. These steps are outlined in this booklet and are not difficult to follow! Please use them to make healthy choices for yourself and for the people you love.
Preventive Screenings

Prevention is key to living long and living well. Getting preventive screenings and immunizations are among the most important things you can do for yourself. Take time to review these guidelines for screening tests and immunizations. Use the charts on the next

Medicare Covered Preventive Services

Check this chart to see what screenings and immunizations are covered under Medicare. For more information, call 800-MEDICARE or visit www.medicare.gov.

### Covered Services

**Bone Mass Measurements for Osteoporosis**:  
Once every 2 years if your health care provider determines you are at risk for bone loss.

**Colorectal Cancer Screening** (Age 50+):  
- **Fecal Occult Blood Test**  
  Once every 12 mos.  
- **Flexible Sigmoidoscopy**  
  Once every 48 mos.  
- **Colonoscopy (no min age req)**  
  Once every 24 mos. if you are at high risk for colon cancer. Starting July 1, 2001, once every 10 yrs but not within 48 mos. of a screening sigmoidoscopy if you are not at high risk for colon cancer.  
- **Barium Enema**  
  Doctor can decide to do instead of a sigmoidoscopy or colonoscopy.

**Pap Test and Pelvic Examination**:  
(Includes a clinical breast exam) Once every 36 mos. Once every 12 mos. if you are at high risk for cervical or vaginal cancer, or if you are of childbearing age and have had an abnormal Pap test in the preceding 36 mos. Starting July 1, 2001, Pap test and pelvic examinations are covered once every 24 mos.

**Diabetes Services** (if you have diabetes):  
- Coverage for glucose monitors, test strips, and lancets.  
- Diabetes self-management training (if requested by your health care provider).

**Glaucoma Screening**:  
Starting July 1, 2002, once every 12 mos.  
Must be done or supervised by an eye doctor who is legally allowed to do this service in your state.

**Mammogram Screening** (age 40+; baseline mammogram between ages 35 and 39):  
Once every 12 mos. Medicare also covers new digital technologies for mammogram screenings.

**Shots (Vaccinations)**:  
- **Flu Shot**  
  Once a year in the fall or winter.  
- **Pneumococcal Pneumonia Shot**  
  One shot may be all you will ever need. Ask your health care provider.  
- **Hepatitis B Shot**  
  If you are at medium to high risk for hepatitis.

* Covered for people with Medicare who are at high risk for these conditions.
living with a

Healthy Heart

Did you know that heart disease is the number one killer of women in the U.S.? Learn more about your heart and blood vessels, and what you can do to protect them and improve your health now and for years to come!

Steps you can take:

- Quit smoking. Smoking increases your risk for heart attack and stroke. Ask your health care provider for help.
- Control your blood pressure. Cut down on sodium, salt, and alcohol.
- Control your blood cholesterol. Get your cholesterol checked at least once every five years.
- Control your weight. Avoid fad diets and diet pills.
- Exercise most days for 30 minutes.
- If you have diabetes, monitor and control your blood sugar levels.
- Talk with your health care provider about your heart disease risks and your family’s heart disease history.
- If you are currently using oral contraceptives (birth control pills) or hormone replacement therapy (HRT), ask your health care provider if they are safe for you.
- Reduce your stress level.
- If you are over 50, talk with your health care provider about aspirin therapy.
- If you have ever had a “mini stroke,” or transient ischemic attack (TIA), tell your health care provider right away.

Visit the National Women’s Health Information Center web site: www.4woman.gov
Know the Warning Signs

Heart Attack

If you have these symptoms, call 911 right away! Every minute counts, even if the symptoms seem to disappear!

Know that not everyone gets these warning signs. And, sometimes these signs can go away and return. Treatments are most effective if given within one hour of when the attack begins.

- Chest discomfort or uncomfortable pressure, fullness, squeezing, or pain in the center of the chest that lasts longer than a few minutes, or comes and goes.
- Spreading pain to one or both arms, back, jaw or stomach.
- Cold sweats and nausea.

As with men, women’s most common symptom is chest pain or discomfort. But women are more likely than men to have some of the other warning signs, especially:

- shortness of breath.
- nausea.
- vomiting.
- back or jaw pain.

www.4woman.gov/hhs
Know the Warning Signs

Stroke

If you have these symptoms, call 911 right away! Every minute counts, even if the symptoms seem to disappear!

Not everyone gets all of these signs. And, sometimes these signs can go away and return. Treatments are most effective if given within one hour of when the attack begins.

- Sudden numbness or weakness of face, arm or leg, especially on one side of the body.
- Sudden confusion or trouble speaking or understanding speech.
- Sudden trouble seeing in one or both eyes.
- Sudden trouble walking, dizziness, or loss of balance or coordination.
- Sudden headache with no known cause.
- Blurred or double vision, drowsiness, and nausea or vomiting.
living with

Healthy Bones

Most women begin to lose bone mass around age 30. After menopause, bone density can begin to decrease rapidly. This increases your risk for osteoporosis when bones become weak and brittle and break more easily. Bone loss is a serious condition that can be prevented and treated, helping you stay healthy and strong.

Steps you can take:

- Eat foods rich in calcium and vitamin D, such as low-fat milk, yogurt, cheese, fish with edible bones like sardines, and dark, green leafy vegetables, like kale and broccoli.
- Do weight-bearing exercise, such as walking, jogging, hiking, and stair climbing. Always check with your health care provider before starting an exercise program.
- Don’t smoke and quit if you do. Ask your health care provider for help.
- Limit alcoholic beverages, high salt, protein, and caffeine intake.
- Talk with your health care provider about taking calcium supplements.
- Talk with your health care provider about your risks for osteoporosis.
- You might need bone density testing, especially if you have broken a bone, or are over age 65.
- If you are currently taking hormone replacement therapy (HRT) or estrogen replacement therapy (ERT) to prevent bone loss, ask your health care provider if it is right for you. Recent studies suggest these might not be a good option for many women.
- If you are developing osteoporosis, talk with your health care provider about available drugs that preserve bone or slow bone loss.

Breast Cancer Early Detection

Breast cancer is the most common type of cancer in women. The older a woman is, the greater her risk. Most women who develop breast cancer have no special risk factors for the disease, so it is critical to do what you can to detect cancer early, and have a healthy lifestyle.

Steps you can take:

- Do a monthly breast self-exam. Check for lumps or other changes in your breasts and in your underarm area.
- Get a yearly breast exam by a health care provider.
- Discuss your family’s health history and your own risk factors for breast cancer with your health care provider.
- If you are in menopause and are taking hormone replacement therapy (HRT), talk with your health care provider about whether it is right for you. For some women, it can increase breast cancer risk. Talk with your health care provider about other treatments available to help you manage menopause.
- Get a mammogram every 1 to 2 years after age 40, yearly after age 50, or more often if your health care provider recommends it.
- Exercise regularly.
- Drink alcohol only moderately, if at all.
- Eat a healthy, balanced diet.
Living with Healthy Lungs

Healthy lungs help our bodies to get all of the oxygen they need to thrive. Did you know that lung cancer kills more women than breast cancer? Learn about the things that can harm your lungs and take control of your lung health.

Steps you can take:

If you have chronic bronchitis, asthma, or allergies, follow your health care provider’s recommendations to manage your condition.

Don’t smoke. If you do smoke, quit. Ask your health care provider for help.

Exercise regularly.

Avoid tobacco smoke and other pollutants. Being around second-hand (other people’s) smoke can be dangerous for you and your children.

Have your home tested to detect any dangerous levels of radon.

If you work around asbestos, wear protective clothing.

See your health care provider immediately if you have any unusual symptoms such as a persistent cough, coughing up blood, and constant chest pain. It could be lung cancer or another serious problem.
living with a

**Healthy Pregnancy**

Having a healthy baby begins even before you get pregnant. That new life growing inside you will depend on you to make good choices about your health.

**Steps you can take:**

- Eat a healthy diet with lots of fruits, vegetables, grains, and calcium-rich foods.
- Get proper rest and do not overdo it!
- Be sure to get at least .4 mg (400 mcg or micrograms) of folic acid every day to reduce the risk of birth defects. Do so also when you are trying to get pregnant. Folic acid is in leafy green vegetables, kidney beans, orange juice, whole grain products and other foods, and in most multivitamins.
- Do not smoke, drink alcohol, or use drugs when you are pregnant or trying to get pregnant. These can cause long-term damage to your baby.
- Be physically active every day, but only at the pace recommended by your health care provider.
- Limit or eliminate your caffeine intake from coffee, tea, sodas, medications, and chocolate.
- Stay away from toxic chemicals like insecticides, cleaning or paint thinning solvents, lead, and mercury.
- Avoid hot tubs, saunas, and x-rays.
- Don’t handle or eat uncooked meats or fish.
- Do not handle cat litter—it can carry a parasitic infection that can cause birth defects.

Menopause

Menopause is a time of change for women that allows us to explore a different phase of life. While we all have different menopause experiences, we can use this time to focus on taking better care of ourselves! Regular exercise and a good diet can help to ease the symptoms of menopause and improve your overall health. For years, hormone therapy was standard treatment for the symptoms of menopause. Recent studies suggest however, that it might not be a good option for many women. Talk with your health care provider about other treatments available to help you manage menopause.

Steps you can take:

Hot Flashes and Night Sweats—Avoid hot flash “triggers” like a too warm environment (especially when sleeping), hot or spicy foods, alcohol, caffeine, and stress. Dress in layers, sleep in cotton bed clothes, and keep a fan in your bedroom or workplace.

Vaginal Dryness—Over-the-counter vaginal lubricants can help ease vaginal dryness. Your health care provider may also recommend prescription estrogen creams.

Difficulty Sleeping—Regular exercise can help with sleep. Avoid alcohol, caffeine, large meals, and working or exercising right before bedtime. Try drinking warm herb tea or milk before bedtime.

Problems With Your Periods—If you experience heavy bleeding, spotting between periods, or other unusual bleeding, talk to your health care provider.

Celebrate the Transition—It’s time to try new things and above all, take care of yourself!
living with

Reproductive Health

Prevention is important to a woman’s reproductive health. Pelvic exams can detect problems before they become severe. Pap tests are particularly important for early detection of cervical cancer, which when found early can be cured. Talk with your health care provider about any concerns you may have, including tests for sexually transmitted diseases (STDs) and HIV (the virus that causes AIDS) if you feel you are at risk.

Steps you can take:

- Have regular pelvic exams and Pap tests. Talk with your health care provider about how often you need them.
- See your health care provider right away if you have abnormal bleeding or discharge, or pain during sex, in your pelvic area, or during urination.
- To find out where you can get a free or low-cost Pap test in your area, call the Centers for Disease Control and Prevention’s National Breast and Cervical Cancer Early Detection Program at 888-842-6355 (toll-free).
- If you are sexually active, get regular checks for STDs such as chlamydia, gonorrhea, and genital herpes. STDs are especially dangerous in pregnancy and can harm you and your baby.
- You can help prevent STDs and HIV/AIDS by using condoms every time you have sexual contact. But, condoms aren’t 100% foolproof and the best way to avoid STDs is to practice abstinence (don’t have sex). Birth control methods other than condoms, such as pills and implants, won’t protect you from STDs or HIV.
- If you think you have been exposed to HIV, get tested. You can call the CDC National AIDS hotline at 800-342-2437 (English) or 800-344-7432 (Spanish) or 800-243-7889 (TTY) for more information.
- Become educated about the different methods of birth control. Talk with your health care provider about which option is best for you.

Healthy Outlook

Women today have busy, demanding lives! You may feel pulled in different directions and experience stress from dealing with work, family, and other matters, leaving little time for yourself. Learning to balance your life with some time for yourself will pay off with big benefits – a healthy outlook and better health!

Steps you can take:

Stay in touch with family and friends.
Be involved in your community.
Keep a positive attitude and do things that make you happy.
Learn to recognize and manage stress in your life. Signs of stress include trouble sleeping, frequent headaches and stomach problems, being angry a lot, and turning to food, drugs, and alcohol to relieve stress.
Good ways to deal with stress include regular exercise, healthy eating habits, and relaxation exercises (like deep breathing or meditation). Talking to family members and friends can help a lot too. Many women find that interacting with their faith community is helpful in times of stress.
Get enough sleep and rest – adults need around 8 hours of sleep a night!
Talk to your health care provider if you feel depressed for more than a few days; depression is a treatable illness. Signs of depression include feeling empty and sad, crying a lot, loss of interest in life, and thoughts of death or suicide. If you or someone you know has thoughts of suicide, get help right away. Call 911, a local crisis center, or 800-SUICIDE.

Healthy Eyes & Ears

Vision and hearing loss can happen as we age. Other problems with our eyes and ears can happen as we work and play. Prevention, early detection, and proper treatment for injury or disease to your eyes and ears will help you enjoy independence and a quality life.

Steps you can take:

- Get your eyes examined once initially between the ages of 20 to 39; every 2 to 4 years at age 40 to 64; and every 1 to 2 years at age 65 and older. If you need glasses or have other eye problems, talk with your health care provider about how often to get an exam.

- At age 50, talk to your health care provider about having a hearing exam.

- See your health care provider right away if you have any signs of hearing loss or vision problems.

- Wear protective glasses when working with materials that can harm eyes, and wear sunglasses when outside, even if it’s cloudy.

- When playing sports, wear protective eyewear made of polycarbonate plastic and fitted by an eye care professional.

- Don’t smoke, and control high cholesterol—these increase your risk for age-related macular degeneration (AMD), a common cause of vision loss in people over age 60.

- Wear earplugs when doing loud activities (above 90 decibels) such as attending rock concerts, or using a snowmobile, chainsaw, lawn mower, or motorcycle.

- Never insert anything into your ear canal, and wear a helmet when bicycling or doing other activities that could cause head injury.

Colorectal Health

Colorectal cancer is the third most diagnosed cancer in women, following breast and lung cancers. It can be a “silent” disease because many people do not develop symptoms until the cancer is difficult to cure. The good news is that colorectal cancer is preventable and 90% curable when detected early.

Steps you can take:

Eat a low-fat, high-fiber diet and reduce fats.
Consider taking calcium supplements and increasing intake of foods with high levels of vitamins C, A, and D.
Avoid becoming overweight.
Drink alcohol in moderation, if at all.
Avoid salt-cured, pickled, and smoked foods.
If you smoke, quit. Ask a health care provider for help.
Get regular physical activity.
When you turn 50, start getting regular colorectal screening exams from your health care provider. These include yearly rectal exams and stool blood tests, as well as sigmoidoscopy every 5 years and colonoscopy every 10 years. If family members developed cancer at a young age, talk with your health care provider about testing at an earlier age.
living with a

Healthy Lifestyle

A healthy lifestyle can help you thrive as you move through the seasons of life that every woman experiences. But, making healthy choices isn’t always easy! It can be hard to find the time and energy to exercise regularly or prepare healthy meals. Your efforts, though, will pay off in many ways, and for the rest of your life!

Steps you can take:

Be physically active for 30 minutes most days of the week. Break this up into three 10-minute sessions when pressed for time.

Eat a well-balanced, low-fat diet with lots of fruits, vegetables, and whole grains. Choose a diet low in saturated fat and cholesterol; moderate in sugar, salt and total fat. Choose vegetable oils and soft tub margarine rather than solid fat (meat and dairy fats, butter, lard and shortenings). Use the Food Pyramid as a guide.

Avoid injury by wearing seatbelts and bike helmets, using smoke and carbon monoxide detectors in the home, and using street smarts when walking alone.

Drink alcohol only in moderation. Never drink before or when driving, or when pregnant.

Don’t smoke, and quit if you do! Ask your health care provider for help.

Use prescription drugs wisely—read the label, ask your health care provider or pharmacist for details about the medicine, keep a record of the medicines you use, take medicine(s) correctly, and report side effects to your health care provider.

Ask someone you trust for help if you think you might be addicted to drugs or alcohol.
living with a

Healthy Smile

Good oral health helps you have a lot more than a pretty smile—it also helps your overall health. Keep your teeth, gums, and mouth healthy by having regular oral exams, practicing good oral hygiene, and eating a healthy diet.

Steps you can take:

- Drink fluoridated water and use fluoride toothpaste. Fluoride protects against tooth decay at all ages.
- Brush after meals with a soft or medium bristled toothbrush. Also brush after drinking, before going to bed. Use dental floss daily.
- See your dentist twice a year for an oral exam and call right away when you have any problems like bleeding gums, mouth sores, or trouble swallowing or chewing.
- If you are pregnant, have an oral exam early in your pregnancy.
- Don’t smoke and quit if you do. See your health care provider for help. Drink alcohol only in moderation, if at all.
- Have a well-balanced, nutritious diet, and limit sugary foods.
- If you have diabetes, practice good oral hygiene to prevent gum disease.
- If you have a baby, wiping your baby’s gum ridges with a soft cloth or baby toothbrush after nursing or feeding can help remove sugars that cause tooth decay.
living with

Healthy Skin

The skin, your body’s largest organ, protects you against heat, light, injury, and infection. A suntan is not a sign of health – it can lead to skin damage, and eventually, premature aging, wrinkling or skin cancer. Skin cancer can be prevented and it is never too late to start taking better care of your skin!

Steps you can take:

Stay out of the sun, especially between 10 a.m. and 3 p.m. when the sun’s harmful rays are strongest. Don’t think you are safe if it is cloudy or if you are in the water, harmful rays pass through both.

Use a broad spectrum sunscreen that guards against both UVA and UVB rays, with a sun protection factor (SPF) of 15 or higher. Reapply the lotion often, especially if you are getting wet or sweating, or even if the product is water resistant.

Wear protective clothing like a wide-brimmed hat and loose, lightweight, long-sleeved shirts and long pants or long skirts when in the sun. Select sunglasses that block 99 to 100 percent of the sun’s rays.

Do not use sunlamps, tanning beds, and tanning pills. None of these are safe. You can use tanning make-up products safely, but remember they are not sunscreens and will not protect your skin from the sun.

Check your skin often, ideally after a shower or bath, for any changes in moles or birthmarks or for precancerous skin lesions that look dry, scaly, reddish, and slightly raised. Report any changes immediately to your health care provider. You can also get a yearly skin and mole exam from a health care provider.
living with

Urinary Tract Health

Proper function of our urinary system is a natural part of our day and we usually don’t think about it until we have a problem. To keep your urinary tract healthy, practice good hygiene, prevent urinary tract infections (UTIs), and see your health care provider about any problems.

Steps you can take:

- Natural ways to prevent UTIs are to drink plenty of water daily and take vitamin C. Cranberry juice also helps keep the bacteria that cause UTIs out of your system.
- Each day, cleanse the area around the rectum and vagina.
- Always urinate when you feel the need and wipe from front to back to prevent bacteria from entering the vagina or opening to the urinary tract.
- Cleanse the genital area before sex, and empty your bladder before and after sex.
- Avoid douching and using feminine hygiene sprays, which irritate vaginal tissue.
- Wear underwear with a cotton crotch which allows moisture to escape. Too much moisture creates a breeding ground for infections.
- To prevent kidney infections, see your health care provider as soon as you have symptoms of a UTI. Symptoms include: a frequent urge to urinate, but only passing a small amount of urine; burning, pressure or pain in the bladder or when urinating; feeling tired, shaky or washed out.
- Talk to your health care provider about bladder control problems. Don’t let these problems limit your activities.
living without

**Violence in Your Life**

Violence against women is never justified and is always wrong. It affects not only women of all ages and racial, cultural, and economic backgrounds, but children, families, and friends of the victims. Unfortunately, it is not uncommon, with 1 in 4 American women reporting being raped or physically assaulted at some time in their life by someone they know. Don’t let violence stifle your spirit. If you or someone you know are experiencing violence, there is help available.

**Steps you can take:**

If you are being abused by a spouse or partner, leave immediately! Understand that you’re not alone. Don’t ignore it or wait for it to go away – it won’t. You are in danger and your children may be as well. Call the National Domestic Violence Hotline (800-799-SAFE) 24 hours a day for help and referrals to local hotlines and other resources like shelters. The Hotline has operators to talk to you in English, Spanish, and other languages. Don’t keep it to yourself. Get help. Talk with someone: a family member, friend, colleague, workplace counselor, or faith counselor.

If you’ve been hurt, get medical attention right away and call the police. Any type of abuse, including domestic violence, rape, and stalking are all crimes.

Talk to a local family court counselor about civil protection orders to protect yourself from further abuse, domestic violence, or stalking.

If you decide to leave, choose a place to go and set aside some money. Put important papers and items in a place where you can get them quickly.
Pick Your Path to Health

An Educational Campaign from the Office on Women’s Health

Women today are confronted with numerous challenges—from the demands of home and family to the pressures of work. Although the decisions we make in these areas are important, nothing influences our fate more than the choices we make about our own personal health and well-being.

THE PICK YOUR PATH TO HEALTH CAMPAIGN is a partnership between the national Office on Women’s Health and its representatives in the 10 Department of Health and Human Services’ regions, other government partners, national non-profit organizations, National Centers of Excellence in Women’s Health, National Community Centers of Excellence in Women’s Health, local media, and other local organizations around the country.

THE PICK YOUR PATH TO HEALTH CAMPAIGN suggests practical, simple actions that you can take to look and feel better. Throughout this book, at the beginning of each new month, you will find action steps that you can take to improve your health habits. Pick your path to health. It’s easier than you think.

The Campaign encourages health awareness among all women, with special emphasis on minority women. Together, participating partners are sponsoring health fairs, screenings, and other educational activities in communities nationwide. If you would like to learn more about the Campaign, obtain a community action kit, or get a poster, please contact:

Pick Your Path to Health

Monthly Themes & Action Steps

January - Spirituality

Make a list of 10 victories you can celebrate in your life.
Measure success by how much health, peace, and joy you have.
Reward yourself for all you do.
Take a moment to celebrate your spirit.

February - Physical Activity

Treat your family to some time at a community recreation facility.
Start to exercise gradually and work your way up.
Start your spring cleaning early, it’s a great way to exercise.
Strengthen your legs and your heart. Take the stairs instead of the elevator.

March - Overweight and Obesity

Carry a water bottle with you every day and refill it at least three times.
Burn some of the calories you take in—exercise can help you lose weight.
Eat five to nine servings of fruits and vegetables a day. Dried fruits count!
Make a low-calorie shopping list.

April - Alcohol Use: Know your limits

Resist the pressure to serve alcohol. Host an alcohol-free party.
Volunteer to be the designated driver.
Don’t get in a car if the driver has been drinking alcohol, no matter who they are.
If you may be pregnant, don’t drink.
Alcohol can harm your baby even before you know you’re pregnant.
Pick Your Path to Health
Monthly Themes & Action Steps

May - Mental Health: Lower your stress. Improve your health.

- Have one good belly laugh today.
- Take 15 minutes for yourself each day.
- If you’re feeling overwhelmed, ask for help.
- Don’t be afraid to seek counseling.

June - Health Care Access: Your health matters

- Schedule routine check-ups for your family.
- Ask your local clinic about low-cost or free mammograms and pap tests.
- Get better results from your provider.
- Ask questions and expect answers.
- Call 1-800-KIDS-NOW to learn about low-cost health insurance.

July - Drug Abuse: Use and you lose

- Don’t experiment—you can become addicted even the first time.
- Protect your health and your future. Drugs can damage your body and ruin your relationships.
- Call Narcotics Anonymous at 1-818-773-9999 to help or get help from your local chapter.
- If you’re taking prescribed medication, ask your doctor before taking any other medication or herbal supplements.

August - Family: Get support from those who care.

- Plan a funny, family story night and take turns being silly.
- Invite your child’s friends over for a get-acquainted party.
- Make bedtime a set time for kids each night.
- You’ll have more time to relax.
- Start a new family tradition—focus on health.

Call for free health publications: 800-994-WOMAN (9662) TDD: 888-220-5446
Pick Your Path to Health
Monthly Themes & Action Steps

September - Prevention: It’s better than cure.
- Eat a well-balanced diet rich in calcium and vitamin D, it can help prevent osteoporosis.
- Ask your local pharmacist where to get a flu shot.
- If you are over 40, ask your doctor about mammograms.
- Schedule your pap test and pelvic exam.

October - Violence Prevention: Empower yourself
- Make a list of safe places you can go to protect yourself from abuse.
- Empower yourself! Sign up for a self-defense class.
- Keeping abuse a secret does not help anyone. Call 1-800-799-SAFE (English and Spanish).
- Help a friend in danger.

November - Tobacco Use: Smoking
- Find a support program in your community to help you stop smoking. Call 1-800-994-WOMAN.
- If you haven’t started smoking, don’t start.
- Create a no-smoking rule in your house.
- Ask your health provider about methods to help you quit smoking.

December - Responsible Sexual Behavior: Think before you act.
- Don’t be afraid to say “no!” It’s your body and your life.
- You don’t need symptoms to be sick. Get tested for STDs.
- Put the “he” into health. Ask about your partner’s sexual history.
- Listen to your instincts. If it doesn’t feel right, it probably isn’t.
Talking with your Health Care Provider

Knowing how to talk to your health care provider (HCP) will help you get the information you need to make better health care decisions. Here are some tips for talking with your HCP:

Make a list of health concerns and questions to take with you to your visit. Share the list with your HCP.

Describe symptoms clearly and briefly. Say what the symptoms are, when they began, how they make you feel, what triggers them, what (if anything) makes them stop, and what you’ve done to relieve them. This helps your HCP decide the best course of treatment, along with any tests you may need.

Tell your HCP what prescription and over-the-counter medicines, vitamins, herbal products, and other supplements you’re taking. Be honest about your diet, physical activity, smoking, alcohol or drug use, and sexual history. Discuss allergies to drugs, foods, or other things. Tell your HCP if you are being treated by another HCP, including a mental health professional.

Don’t be afraid to ask questions and don’t feel embarrassed about discussing sensitive topics. Your HCP is used to talking to people about personal concerns. Don’t leave something out because you’re worried about taking up too much time.

Be sure you understand everything before you leave your HCP. This includes treatment recommendations and any follow-up tests or referrals. If you don’t understand something, ask to have it explained again.

Bring a family member or friend with you to take notes and offer moral support. An extra pair of eyes and ears can help you remember your questions as well as the answers.
Checklist of Questions to ask your Health Care Provider

General Health and Wellness Questions
How often do I need a physical exam, breast exam, pelvic exam and Pap test?
Do I need a flu shot or other immunizations?
Will changing my lifestyle (diet, exercise, smoking, drinking) help me avoid certain diseases? What can I do to be more healthy? Is there any reading material or videotapes on these topics? Are there support groups or community services that can help?

Medical Test Questions
What will we know after the test is done?
How do I find out the results? How long will it take to get the results?
What does the test involve? What do I do to get ready for it?
Are there any dangers or side effects with the test?

Symptoms and Diagnosis Questions
Could my symptoms be caused by or related to something other than my current condition?
What may have caused my current condition?

Treatment Questions
How is this condition treated or managed? What long-term effects (if any) will it have on my life?
How soon should treatment start? How long will it last?
Are there other treatments available?
How much will the treatment cost? Is it covered by insurance?
What are the treatment’s risks and side effects?

Medication Questions (you can also ask your pharmacist)
What are the side effects?
What should I do if I miss a dose?
Are there foods, drugs, or activities I should avoid while taking this medicine?
Is there a generic brand available at a lower price?
