

# Illinois Influenza Surveillance Report

# Week 12: March 21 – March 27, 2010

**Division of Infectious Diseases** 

**Immunization Section** 

Thursday, April 1, 2010

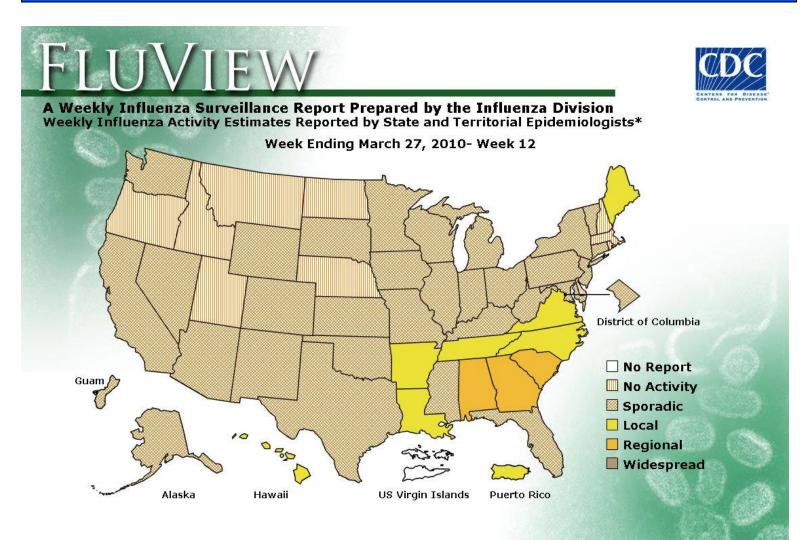

### IN THIS ISSUE

Summary	Page 2
CDC FLU View	Page 3
2009 H1N1 Hospital Admissions and Deaths	Page 4
ILI Net	Page 5
Laboratory surveillance summary	Page 6
National antiviral resistance data and resources	Page 7

# SUMMARY

- The risk of illness due to influenza viruses is low. During CDC week 12, the proportion of outpatient visits for influenza-like illness (ILI)<sup>i</sup> was 1.3 %. Numerous respiratory viruses can cause ILI, and these viruses are now more prevalent than influenza viruses. <sup>ii</sup>
- Based on CDC criteria; influenza activity is currently sporadic in Illinois. For more information visit <u>http://www.cdc.gov/flu/weekly/fluactivity/htm</u>.
- During week 12, two influenza A viruses were sub typed by IDPH and sentinel hospitals; both of these were 2009 influenza A (H1N1).
- Among individuals with confirmed 2009 influenza A (H1N1) since April 2009, 3,014 hospital admissions and 107 deaths have been reported. More than 90% of hospitalized individuals were less than 65 years old.

#### **CDC FLU VIEW**

\*This map indicates geographic spread and does not measure the severity of influenza activity.

Activity Level	ILI activity*/Outbreaks		Laboratory data				
No activity	Low	And	No lab confirmed cases <sup>†</sup>				
	Not increased	And	Isolated lab-confirmed cases				
Sporadic		OR					
	Not increased	And	Lab confirmed outbreak in one institution <sup>‡</sup>				
	Increased ILI in 1 region**; ILI activity in other regions is not increased	And	Recent (within the past 3 weeks) lab evidence of influenza in region with increased ILI				
Local	OR						
Local	2 or more institutional outbreaks (ILI or lab confirmed) in 1 region; ILI activity in other regions is not increased	And	Recent (within the past 3 weeks) lab evidence of influenza in region with the outbreaks; virus activity is no greater than sporadic in other regions				
Regional (doesn't	Increased ILI in ≥2 but less than half of the regions	And	Recent (within the past 3 weeks) lab confirmed influenza in the affected regions				
apply to states with	OR						
≤4 regions)	Institutional outbreaks (ILI or lab confirmed) in ≥2 and less than half of the regions	And	Recent (within the past 3 weeks) lab confirmed influenza in the affected regions				
Widespread	Increased ILI and/or institutional outbreaks (ILI or lab confirmed) in at least half of the regions	And	Recent (within the past 3 weeks) lab confirmed influenza in the state.				

ILI activity can be assessed using a variety of data sources including ILINet providers, school/workplace absenteeism, and other syndromic surveillance systems that monitor influenza-like illness.

<sup>+</sup>Lab confirmed case = case confirmed by rapid diagnostic test, antigen detection, culture, or PCR.

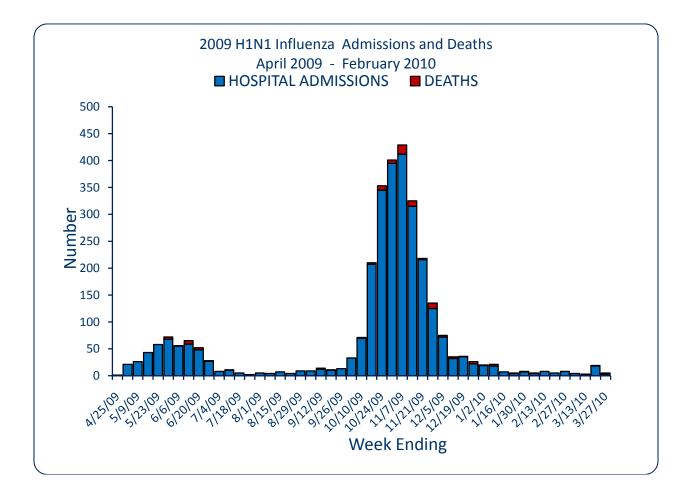

Institution includes nursing home, hospital, prison, school, etc.

\*\*Region: population under surveillance in a defined geographical subdivision of a state.

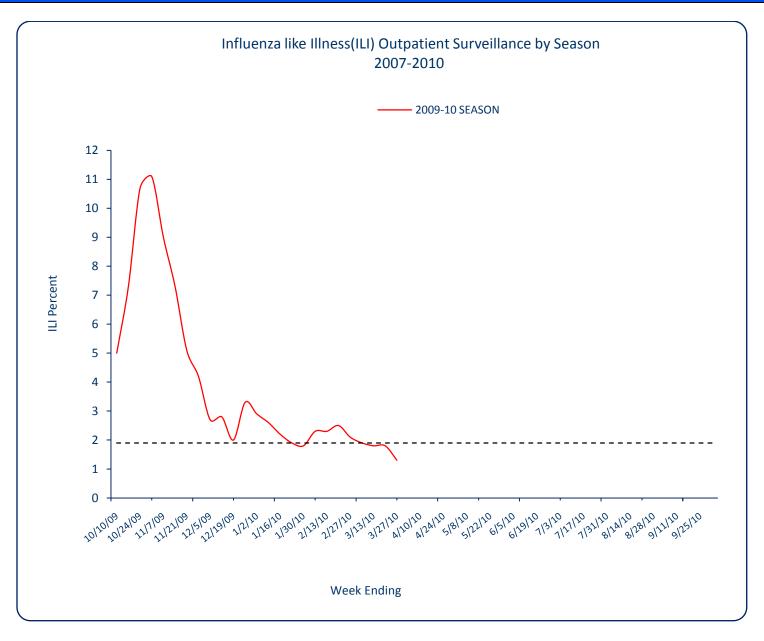

#### 2009 H1N1 Influenza HOSPITAL ADMISSIONS AND DEATHS

Γ

Illinois 2009 H1N1 Influenza: Cumulative Hospitalization and Deaths by Age Group Through March 30, 2010 <sup>iii</sup>							
Age range	Admissions	Percent	Deaths	Percent			
0-4 Years	600	(20)	2	(2)			
5-18 Years	671	(22)	11	(10)			
19-24 Years	243	(8)	6	(5)			
25-49 Years	771	(26)	38	(36)			
50-64 Years	524	(17)	32	(30)			
65 + Years	204	(7)	18	(17)			
Unknown	1	(0)	0	(0)			
TOTAL	3014		107				

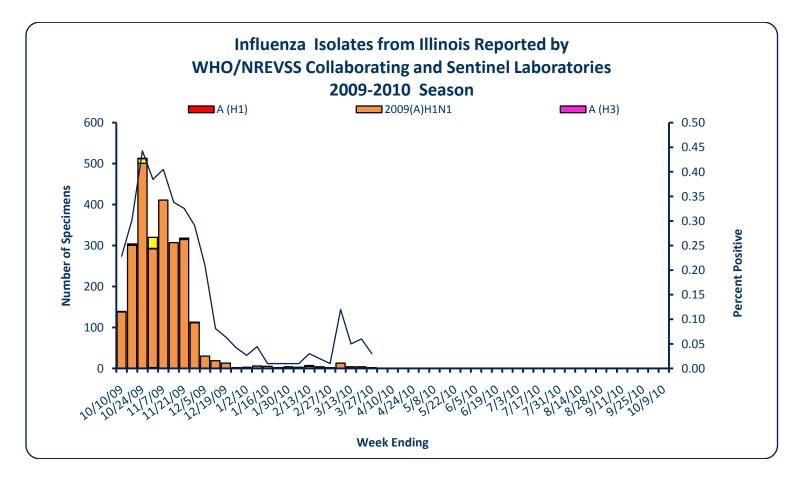

#### **ILI NET PROVIDER SURVEILLANCE**

### LABORATORY SURVEILLANCE

During week 12, two (5%) specimens tested by Illinois WHO/NREVSS<sup>iv</sup> collaborating laboratories and sentinel sites<sup>v</sup> tested positive for influenza. Both of these isolates were 2009 influenza A (H1N1) viruses.

Week	No of Labs Reporting	A (H1)	2009(A)H1N1	A (H3)	A(Unable to subtype)	A(Sub typing not performed)	В	Total # Tested	% Positive
8	2	0	2	0	0	0	0	219	0.01
9	2	0	8	0	0	0	0	174	0.05
10	2	0	10	0	0	0	0	168	0.06
11	2	0	8	0	0	0	0	174	0.05
12	2	0	2	0	0	0	0	79	0.03
2009-10 Season 1	to Date	2	2503	2	43	0	6	9782	0.3

## NATIONAL ANTIVIRAL RESISTANCE DATA

#### Antiviral Resistance Testing Results on Samples Collected Since September 1, 2009.

	Viruses tested (n)	Resistant Viruses, No. (%)	Viruses tested (n)	Resistant Viruses, No. (%)	Viruses tested (n)	Resistant Viruses, No. (%)
	Oseltamivir		Zanamivir		Adamantanes	
Seasonal Influenza A (H1N1)	1	1 (100)	0	0 (0)	1	0 (0)
Influenza A (H3N2)	13	0 (0)	0	0 (0)	13	13 (100)
Influenza B	23	0 (0)	0	0 (0)	NA	NA
2009 Influenza A (H1N1)	4289	52 <sup>vivii</sup> (1.2)	1617	0 (0)	1608	1604 (99.8)

The majority of 2009 influenza A (H1N1) viruses are susceptible to the neuraminidase inhibitor antiviral medication oseltamivir; however, rare sporadic cases of oseltamivir resistant 2009 Influenza A (H1N1) viruses have been detected worldwide. A total of 64 cases of oseltamivir resistant 2009 influenza A (H1N1) viruses have been identified in the United States since April 2009. Of these 64 cases, 55 have been identified in the United States since September 1, 2009.

#### RESOURCES

Centers for Disease Control and Prevention Influenza Website: <u>http://www.cdc.gov/flu/weekly/fluactivity.htm</u> Immunization Action Coalition Website: <u>http://immunize.org/</u> IDPH Website http://www.idph.state.il.us/flu/surveillance.htm

<sup>1</sup> ILI "Influenza like Illness" is defined as fever  $\geq$  100°F and cough and/or sore throat.

<sup>ii</sup> For more information regarding circulating respiratory viruses, see

b. http://www.acllaboratories.com/

<sup>iv</sup> WHO/NREVSS Collaborating Laboratories WHO/NREVSS Collaborating Laboratories: For viral surveillance - About 80 U.S. World Health Organization (WHO) Collaborating Laboratories and 70 National Respiratory and Enteric Virus Surveillance System (NREVSS), located throughout the United States report daily or weekly the results of their testing.

a. http://www.cdc.gov/surveillance/nrevss/rsv/state.html

c. www.stlouischildrens.org/content/ClinicalLaboratories.htm

<sup>&</sup>lt;sup>iii</sup> Beginning 4/5/2009 includes influenza A infections negative for human H1 and H3 by influenza RT\_PCR and positive for novel H1N1 by RT\_PCR

<sup>&</sup>lt;sup>v</sup> Super Sentinel Surveillance Sites: Sites recruited by IDPH to conduct virologic surveillance during summer 2009

vi Two screening tools were used to determine oseltamivir resistance: sequence analysis of viral genes or a neuraminidase inhibition assay

v<sup>ii</sup> Additional laboratories perform antiviral resistance testing and report their results to CDC. Three additional oseltamivir resistant 2009 influenza A (H1N1) virus has been identified by these laboratories since September 1, 2009, bringing the total number to 53. Of the 62 total cases identified, 50 had documented exposure to oseltamivir through either treatment or chemoprophylaxis, eight are under investigation to determine exposure to oseltamivir, three patients had no documented oseltamivir exposure, and in one patient exposure cannot be determined.
