

STATE OF ILLINOIS
DEPARTMENT OF HEALTH

THE ADEQUATE HEALTH CARE TASK FORCE

TUESDAY
JUNE 27, 2006

160 NORTH LaSALLE STREET
CHICAGO, ILLINOIS

1 APPEARANCES:

2 Mr. Wayne Lerner

3 Ms. Sara Duggan-Goldstein

4 Ms. Elissa Bassler

5 Ms. Sylvia Gaydin

6 Ms. Shell Philburg

7 Mr. Ralph Schubert

8 Ms. Stephanie Becker

9 Mr. Michael Gelder

10 Dr. Javette Orgain

11 Mr. David Carvalho

12 Mr. Dave Koehler

13 Ms. Ruth Rothstein

14 Ms. Tracy Printen

15 Mr. Craig Backs

16 Ms. Colleen Kannaday

17 Ms. Jan Daker

18 Mr. Greg Smith

19 Dr. Niva Lubin-Johnson

20 Mr. Jim Duffett

21 Mr. Jim Boyd

22 Ms. Diane Rucinski

23 Ms. Megan Maher

24 Ms. Beth Najberg

1 Ms. Megan McDonald
2 Ms. Carolyn Langware
3 Ms. Ashanti Rouse
4 Ms. Sara Golden
5 Ms. Elissa Butkins
6 Ms. Lynn Taylor
7 Ms. Katherine Sreckovich
8 Ms. Heather Brown-Palsgrove
9 Mr. Joel Sheffel
10 Ms. Colleen Daley
11 Ms. Alicia Huguelet
12 Ms. Margaret Stapleton

1 MR. LERNER: Ladies and gentlemen,
2 I'd like to call the meeting to order. My name is
3 Wayne Lerner. I have the honor of chairing the
4 Adequate Health Care Task Force.

5 I'd like to remind you before we
6 go around the room that if anybody is carrying
7 pagers, Blackberries, defibrillators, anything
8 like that, please turn them off or put them on
9 vibrate so we don't disrupt the proceedings. We
10 have a very full agenda today and we need to stay
11 on time.

12 Let me quickly go around the
13 room. Sara, do you want to start out?

14 MS. DUGGAN-GOLDSTEIN: Sure. Sara
15 Duggan-Goldstein, Illinois Public Health
16 Institute.

17 MS. BASSLER: Elissa Bassler, Illinois
18 Public Health Institute.

19 MS. GAYDIN: Sylvia Gaydin, intern of
20 the Institute.

21 MS. PHILBURG: Shell Philburg
22 representing Health Care Family Services.

23 MR. SCHUBERT: Ralph Schubert,
24 Department of Human Services.

1 MS. BECKER: Stephanie Becker with
2 Health and Disability Act.

3 MR. GELDER: Michael Gelder, Illinois
4 Department on Aging.

5 DR. ORGAIN: Javette Orgain, chair of
6 the State Board of Health.

7 MR. CARVALHO: Dave Carvalho,
8 Illinois Department of Public Health.

9 MR. LERNER: Wayne Lerner.

10 MR. KOEHLER: Dave Koehler with the
11 National Council.

12 MS. ROTHSTEIN: Ruth Rothstein.

13 MS. PRINTEN: Tracy Printen.

14 MR. BACK: Craig Backs, science and
15 medicine.

16 MS. KANNADAY: Colleen Kannaday, St.
17 Francis Hospital in Blue Island.

18 MS. DAKER: Jan Daker, representing
19 United Congregation.

20 MR. SMITH: Greg Smith for Marketing
21 Services in Lincoln, Illinois.

22 DR. LUBIN-JOHNSON: Niva
23 Lubin-Johnson, Prairie State Medical Society.

24 MR. DUFFETT: Jim Duffett, Campaign

1 for Better Health Care.

2 MR. BOYD: Jim Boyd, UFCW.

3 MS. RUCINSKI: Diane Rucinski, School
4 of Public Health, University of Illinois.

5 MR. LERNER: Then we'll go around and
6 ask everybody to speak loud and articulately.

7 MS. MAHER: Megan Maher.

8 MS. NAJBERG: Beth Najberg
9 representing the individually insured.

10 MEGAN McDONALD: Representing the
11 Center for Health Care, Ethics and Advocacy.

12 MS. LANGWARE: Carolyn Langware,
13 League of Women Voters.

14 MS. ROUSE: Ashanti Rouse, intern at
15 the Center of Ethics and Advocacy and Health Care.

16 MS. GOLDEN: Sara Golden, intern for
17 the Center of Ethics and Advocacy and Health Care.

18 MS. BUTKINS: Elissa Butkins.

19 LYNN TAYLOR: Lynn Taylor,
20 Mathematical Policy Research.

21 KATHERINE SRECKOVICH: Katherine
22 Sreckovich, Navigate Consultant.

23 HEATHER BROWN-PALSGROVE: Heather
24 Brown-Palsgrove, Navigate Consultant.

1 MR. SHEFFEL: Joel Sheffel with
2 Suburban Access News Association.

3 MS. DALEY: Colleen Daley, Illinois
4 for Health Care.

5 104

6 MS. HUGUELET: Alicia Huguelet with
7 Y-me Illinois.

8 MR. LERNER: Anybody else that has
9 not been introduced?

10 MS. STAPLETON: Margaret Stapleton
11 from the Shriver Center on Poverty Law.

12 MR. LERNER: Thank you, Margaret.

13 Thank you very much for joining
14 us today. I can't ask for approval of the meeting
15 summaries because we don't have a quorum yet.
16 When we have a quorum, we'll come back to it a
17 little later, or do it at another time. So in the
18 meantime, review the minutes. If there's any
19 additions or corrections offline, let Sara know,
20 and we'll try to get to that later.

21 Also, I just want to mention in
22 terms of how we're going to run today's meeting.
23 In the packet that was sent to you by e-mail, in
24 particular, there's a whole mess of material that

1 we're going to address at about 2:30 with Niva,
2 which really gets us online for the next set of
3 meetings, which is the meat of the agenda, to talk
4 about the various proposals.

5 But there's also a letter there
6 that we will address at the end of the meeting,
7 towards the end. And so I'd like to just hold on
8 that so we don't disrupt the plans, if we can do
9 that.

10 Then, of course, I'll leave time
11 at the end for any personal comments or reflections
12 that people want to make, okay?

13 Margaret just joined us, right,
14 Margaret?

15 MS. DAVID: Yes. Margaret David.
16 Healthcare Consortium of Illinois.

17 MR. LERNER: Now we can start, now
18 that Margaret is here.

19 With that, we're actually ahead
20 of time. And Mike, that means you don't get the
21 extra time.

22 If you want to tee up the
23 presentation for me?

24 MR. CARVALHO: Sure. Following the

1 directions of both the Task Force and the Steering
2 Committee, we have taken what were going to be
3 presentations at this meeting and the next meeting
4 and put them all on this meeting so that you'll
5 have less time devoted to presentations at the
6 subsequent meeting.

7 So this isn't one of those
8 theme-of-the-day. It's themes of the day. And
9 the first theme relates to special populations and
10 long-term care. And the order is as much dictated
11 by the availability of the speakers and the
12 logical business order, but the common theme is
13 special populations.

14 And the purpose is probably
15 apparent, which is since the charge under the
16 statute is to develop a plan for access for all
17 residents of Illinois to healthcare, we need to be
18 aware of the circumstances that certain
19 populations may face in accessing healthcare, both
20 because of holes in the insurance network, but
21 also because of holes in the healthcare delivery
22 network.

23 And so the person who is in a
24 special population may face challenges, even if

1 they are insured, and even if they are in what
2 otherwise might be reviewed as a resource-rich
3 healthcare community.

4 So we've asked people who are
5 familiar with those challenges to make
6 presentations this morning.

7 In addition, one element of the
8 statute asks for you to take a look at issues
9 relating to long-term care. And that could be the
10 subject of a whole task force unto itself with a
11 whole set of hearings, but we're going to focus
12 that down today to long-term care issues as they
13 specifically relate to the charge of the Task
14 Force.

15 So we are starting off with the
16 Assistant Director from the Illinois Department of
17 Aging, Mike Gelder, who has been involved in
18 issues relating to the elderly, long-term care,
19 healthcare, all different types. But today, he's
20 presenting as Assistant Director of the Department
21 of Aging. Mike.

22 MR. GELDER: Thank you, David, Wayne,
23 everyone. Good morning.

24 I have been following this

1 progress very closely. I think I'm the -- I know
2 I'm the designated Department on Aging
3 Representative to the Task Force, so it's a --
4 what you're struggling with, as David said, is an
5 issue that's near and dear to my heart and has
6 been for many, many years. And I hope that in
7 these brief few minutes here, 15 to be precise,
8 that we can talk about some of the issues
9 pertaining to the elderly.

10 Although the topic in the
11 legislation was long-term care in general, I'm
12 speaking about it only in terms of the State's
13 older adult population, primarily 60 and older.

14 So to give you a sense of how
15 many there are in this state and these are -- so
16 we're not talking about a tiny group of people.
17 We're talking in our -- under the Older Americans'
18 Act, the Federal Act that sort of establishes
19 taking this on aging across the country;
20 establishes area agencies on aging, our purview on
21 those people 60 and older, it was just under
22 2 million people at the -- in 2000. It's well
23 more than 2 million now.

24 The 85-plus population was almost

1 -- probably about 200,000. They're under 200,000
2 now. And it continues to grow as the next slide
3 will show. This is the -- this is what's coming.
4 These are the males and females in 1990. And
5 these are males in 1990 and 2000. And these are
6 females in 1990 and 2000.

7 So you can see the gap here
8 represents the growth, generally, of the -- of
9 older adults, both male and female. Of course,
10 much higher proportion of women as you get into
11 later ages because of different mortality rates.

12 So this is an issue that's
13 important now, and becomes even more important to
14 the State to contend with as the 50, 54, as the
15 end of the baby boom generation ages, as they
16 inexorably will, because we're not dying at the
17 rates we were before.

18 This looks at life expectancy.
19 As you can see, men at 85 and women at 85. And
20 you see here the life expectancy continues to
21 increase even at a greater rate for men.

22 So whatever society had been
23 dealing with, going way back into the 1990s, the
24 beginning of the twentieth century, we can see it

1 remained relatively stable especially for women up
2 until the 60s. And at that point, it began to
3 increase as the rate slowed. But it's still a
4 relatively important trend to contend with,
5 recognizing that all those people in this baby
6 boom generation are going to continue to live.

7 And we're not dying of many of
8 the things that -- especially heart disease
9 contributes to that. Cerebral vascular disease,
10 stroke, continues relatively to make -- to
11 stabilize and decrease. Clearly the impact of
12 immunizations for influenza and pneumonia has had
13 a dramatic increase as well.

14 But we will continue to suffer
15 from chronic conditions. And that's the thing
16 that puts the biggest demand on the medical care
17 system at all different levels from primary care,
18 which is the most important entree into the
19 system, even for folks with chronic conditions.
20 Availability and accessibility of physicians.
21 Their training relative to chronic disease and how
22 it affects older adults in particular.

23 The impact downstream from there.
24 The referral specialist, role of a specialist in a

1 healthcare system, assuming we have one. And
2 then, what role social support services play.
3 That's the particular concern of the Department on
4 Aging.

5 But even though we look at the
6 nonmedical side, at the social and support side of
7 the services that people will need, it's clear
8 that they need those services because of chronic
9 conditions.

10 And so, if we have to have -- we
11 have to. We have to have it now and we don't, but
12 if we're going to have an efficient cost-effective
13 system that takes care of needs of older adults
14 and their younger family members who care for
15 them, that system should certainly be as
16 integrated as possible, and not something that we
17 have now by any means.

18 Just a few little statistics. In
19 terms of percentages, the average 75-year-old, and
20 we see that there are a lot now and many more to
21 come, suffers from three of those chronic
22 conditions, and they use five prescription drugs
23 on average. That will probably not decrease over
24 time, which can mean 60 different prescriptions a

1 year on a monthly basis.

2 These aren't antibiotics that you
3 need to take for ten days, two weeks and be done
4 with it. These are prescriptions to be taken for
5 the rest of your life. And that life continues to
6 expand.

7 But the most important thing
8 possibly for this group in terms of financing
9 assistance, is the cost of serving someone over
10 age 65 is three to four times higher than the cost
11 overall of serving someone under 65.

12 In terms of disability, the
13 disability rate of people over 65 is 30.8 percent.
14 Now, that's an important figure in terms of
15 recognizing how much demand and use there will be
16 of the healthcare system and the social supports
17 that need to back that up.

18 But the rate of increase or
19 decrease of that percentage is really what's going
20 to make a difference in terms of how quickly we
21 bankrupt ourselves as individuals, our families,
22 or our nation, depending on how we go about
23 financing or how we don't go about financing
24 long-term care.

1 In Illinois, the CBC has a
2 national ranking for each state. I took several
3 figures from Illinois. One of the most important
4 things in any age, of course, is prevention,
5 healthy lifestyle, education, exercise, diet.
6 Illinois does not do a good job. We have not paid
7 a lot of attention in this area, so these numbers,
8 I think, speak for themselves. Our rank is in the
9 second half and at the very low end for many of
10 these indicators.

11 We're not eating particularly
12 healthfully. Our obesity rate is 46th in the
13 country. We continue to smoke.

14 Something that we could do and
15 should do a much better job at looking at, the
16 impact immunizations have on life expectancy, is
17 our flu shot rate is very low, and the same thing
18 with the pneumococcal vaccine.

19 Are we getting preventive care?
20 We have -- mammograms are fair to middling.
21 Colonoscopy, not good. Preventive services to
22 men, we rank 47. Women, we rank 46.

23 The cholesterol check, we do a
24 little better -- we can do a little better job on

1 that. But that relates -- these, I think,
2 relatively unflattering statistics for the State,
3 relates to what I said earlier in terms of
4 education of the medical community, and the need
5 for the providers these patients are going to, to
6 pay attention to preventive measures even for
7 someone who is considered an older adult.

8 There's still a lot that can be
9 done to save money in the medical system. To save
10 years of misery for the patient by attending to
11 these preventive issues.

12 In Illinois, I think we have --
13 we sort of talked about long-term care in two
14 stages is that there are two context.
15 Institutional care, and from the best we can get
16 from the Health Care Family Services is 41,000
17 older adults in institutions as of, I think the
18 last of the year was 2004.

19 And in-home and community-based
20 care is the other side of that coin where we're
21 now serving -- and I think for the first time
22 possibly -- or I don't know. Statistics are not
23 easily available, so it all depends how you count
24 them.

1 We served over 50,000 people over
2 the course of the year. Our average caseload is
3 just about the same as that 41,000, but we do so
4 with the community care program budget of about
5 \$250 million compared to a multibillion dollar
6 expenditure on behalf of nursing homes for that
7 population.

8 This is one we put together
9 trying to track the statistics from these private
10 healthcare family services and our services for
11 the elderly. It's careful to scale here. These
12 slopes are not really all that dramatic because of
13 the relatively small intervals, but it does show
14 what, I think, people are looking for. And that
15 we're moving in the right direction.

16 A general decrease, a downward
17 arrow in the slope of older adults in nursing
18 homes, and a fairly stable upward trend. This was
19 the only year it went down, and that was for a
20 variety of reasons, one of which was the State
21 instituted a mandatory Medicare application
22 requirement.

23 And that caused a few people not
24 to be interested in service because of their

1 concern about the sort of hundred percent tax
2 imposed on poor people if they get Medicaid
3 services. And if they have a home, they want to
4 leave it to their children, they don't want to --
5 they're fearful of enrolling in Medicaid.

6 But then, its gone up. It went
7 up in '04, gone up in '05, and it went up in '06,
8 so we're now up at about -- on an average caseload
9 over here of over 43,000 a month. So that's the
10 last year for which we had comparable HFS numbers.
11 So that part of the State effort is doing well.

12 well, the fastest growing
13 population group, adults over age 85, requires
14 significant support, increasing public
15 expenditures. Continues to provide the vast
16 majority of --

17 well, despite the increased
18 number of dollars that we're spending in the
19 public sector, and this is a huge concern within
20 state government, a concern for HFS's budget, a
21 concern for the Department on Aging's budget.
22 Concern for the Department of Human Services, as
23 well, which you'll be hearing about, I presume.

24 Families continue to provide the

1 vast majority of care. Eighty percent is the most
2 reliable estimate, so we're only picking up 20
3 percent of that care, but it's already costing us
4 millions of dollars, as you saw a minute ago.

5 And then generally, there's a
6 wide dissatisfaction with the availability of home
7 and community-based services. Of those 41,000
8 people in nursing homes, a big chunk of them don't
9 want to be there, as they indicate to the State
10 every quarter when they do the NBS.

11 Now, some don't have any
12 practical way of exercising their dissatisfaction,
13 but some could. Many could with the more vigorous
14 program of home and community-based services that
15 would allow clients a real option, and families an
16 option to know they can be safely cared for in
17 their homes, their caregiving network supported so
18 they don't need to rely exclusively on paid
19 homemakers. And we're doing that a little bit.
20 And you can see the numbers are going in the right
21 direction, but there's a big room for improvement
22 in that.

23 Seniors generally don't want to
24 go to nursing homes. They universally don't want

1 to go to nursing homes. The one thing people live
2 in fear of in survey after survey, and our own
3 experiences with our own family members, is that
4 they might fall and end up in a nursing home.

5 Any given day, they wake up, many
6 of them have a conscious -- conscious part of
7 their mind, which is a huge burden to live with,
8 the fact that any little mishap could result in a
9 fall, broken hip, surgery, rehab at a nursing
10 home. And no one knows what happens next. And
11 that's something that we definitely want to try to
12 fix.

13 The Olmstead decree defines
14 Americans with Disability Act. Requires states
15 that offers services to support those with
16 disabilities, including the frail, elderly, in the
17 most integrating setting possible. Another basis
18 for our program that you'll hear about for a
19 couple of minutes.

20 And then, the payment rates need
21 to be high enough to attract a quality work force,
22 because it's no good to give people entitlement to
23 services if we can't assure that there's a work
24 force there that are trained, competent,

1 relatively stable to provide the service.

2 The elements of our long-term
3 care reform system proposal or plan that we're
4 working on is moving ahead. It's not just a
5 proposal. It's a coordinated information referral
6 and entry resource for all long-term care services
7 available to the community.

8 We have something now in two
9 areas of the State called Aging and Disability
10 Resource Centers. This a model being pushed
11 vigorously by the federal government. It's an EMS
12 and Administration on Aging.

13 A comprehensive case coordination
14 to make sure that we cover all the services to
15 serve needs of people. Transportation, pharmacy,
16 the whole panoply of services, compared to what we
17 have been doing, which is just to evaluate them
18 for eligibility for a particular program. So we
19 moved ahead on that.

20 We need to make sure that there
21 are extensive services to enhance family
22 caregiving. In fact, in this legislative session,
23 the general assembly approved for the first time,
24 a line item called "Alternative Senior Services,"

1 to make sure that there's more than just homemaker
2 and adult daycare, which are the two basic
3 programs that we've been able to offer for the
4 last 20 years. We'll now be able to offer a
5 variety of services.

6 And a set of consumer directive
7 service options. The way in which the previous
8 generation may have been satisfied with care is
9 not the way in which the baby boom generation or
10 even current adults want their care.

11 They don't want a case manager
12 coming in, assessing them, assigning them to an
13 agency. The agency assigning a homemaker, and a
14 week or two weeks later, the door rings. They
15 have no idea who is on the other side of it. It's
16 their homemaker ready to give them a bath or help
17 with toileting. It's a very, very personal thing,
18 and you've never seen this person before. People
19 want to control their own care. And we're
20 integrating that into our program. But these are
21 principles that we hope that the Task Force will
22 incorporate as well.

23 We want to assist nursing home
24 residents who are there. As I said, there are a

1 lot in every state, not just Illinois certainly,
2 but there are many people who want to come out.

3 We have a program that's doing
4 that. It needs to be invigorated, but we have a
5 program called, "Coming Home." We've got about a
6 hundred people who've come out of nursing homes in
7 the last six months. It's nine months now,
8 through that program. And that's just in four
9 parts of the State. So there's a lot that we can
10 do in the other hundreds of communities where that
11 service is not available.

12 And then we need to encourage our
13 nursing homes to do something more useful, really.
14 And I don't mean that real critically about
15 nursing homes. But this display of the nursing
16 homes of the 70s and 80s doesn't work anymore, by
17 and large, for the elderly.

18 And so they can convert those
19 resources, their structures. They can adopt
20 progressive practices to be more attractive to
21 people. Single-bed rooms. More control over your
22 schedule. Bathe when you want to, eat when you
23 want to. Many homes are doing that.

24 And other things they can do is

1 convert to service -- become adult daycare centers
2 so people can come home at night and use the
3 transportation resources and the expertise of
4 nurses and the highly trained staff at nursing
5 homes to educate the community about tube feeding
6 and things that are being done at home.

7 We want to encourage
8 comprehensive delivery systems that integrate both
9 acute and chronic care, clinical care and social
10 care, the models of social HMO's, Pace, a program
11 of all-inclusive care for the elderly demonstrate,
12 I think, conclusively, according to the research,
13 that you can do this cost effectively.

14 But when we're looking only at
15 saving only Medicaid dollars, and the State and
16 the federal government looking only at saving
17 Medicare money, it's very hard to find the value
18 in trying to look at the whole pot of dollars and
19 the whole person and figure out ways of doing
20 that.

21 But by integrating acute and
22 chronic care and integrating clinical care and
23 support services, that's how you do it. And we
24 can certainly provide more information if anybody

1 is interested in that.

2 We need an adequate supply of
3 caregivers, both in institutional, as well as
4 noninstitutional settings.

5 Lastly, to make this work, there
6 has to be a financing mechanism to cover the cost
7 of long-term care. The state now doesn't have a
8 plan.

9 I mean, each year there's a
10 budget battle. Every state agency that needs more
11 money has to fight for it tooth and nail from our
12 office of Management and Budget. Their job is to
13 keep the overall expenditure level low enough to
14 support -- to maintain and be consistent with the
15 tax base that the State has since that's
16 apparently not going up anytime soon.

17 There isn't any clear answers to
18 where we have to -- where the money is going to
19 come from to support the care of the older adult
20 population that is large now, growing larger,
21 living longer, but suffering from chronic disease,
22 both which place a continued demand for clinical
23 services on us, the taxpayers. And hopefully,
24 this will be integrated into the plan you come up

1 with that you recommend to the State over the next
2 several months.

3 MR. LERNER: Thank you, Mike. We
4 have time for a question or two.

5 MR. BACKS: The statistic, 30.8
6 percent of elderly are disabled. I think we kind
7 of know what the people who are pre-65, where
8 disability statistics might come from, from
9 applications. Where does that statistic -- how is
10 that obtained?

11 MR. GELDER: That's the number we got
12 from CDC. I could get you their source on that.
13 The Centers for Disease Control.

14 And the big debate in the field
15 is what that -- what's happening to that rate.
16 You know, is it static, is it growing? Is it
17 declining? What countries that have preceded us?
18 Illinois' population is still relatively younger
19 than the other western European countries, Japan,
20 and the other industrializations in general.

21 The countries that are older than
22 we are and who aren't having the influx of
23 immigration to keep their population average as
24 young as ours is, they're finding that the

1 disability rate is declining. Canada has found
2 that.

3 That's a real godsend to their
4 national health system is that they -- they don't
5 know how they would sustain it if the disability
6 rates had been steady. But they're declining.

7 MR. LERNER: I'm just got to say --
8 sorry for interrupting.

9 The disability rate really
10 revolves around how you define "disability." And
11 we define it in the field very broadly, so someone
12 like me with a hearing impairment or arthritis, if
13 there's a restriction in your activities of daily
14 living, certainly would qualify for that.

15 But the real key in the elderly
16 as we've looked at it, is the restriction on
17 what's called independent ADLs. Their inability
18 to dress, eat, walk, do checkbook. And those
19 things put all kinds of demands not only on the
20 acute care system, the long-term care system, but
21 the social system.

22 So when you start to unravel
23 that, that's really what you end up with, a much
24 more complex set of problems.

1 MR. GELDER: Yeah. I think that
2 number comes from people with two or more
3 deficiencies of activities of daily living.
4 Bathing, dressing, grooming, eating.

5 MR. BACKS: So it's not equivalent in
6 terms of what one would get for benefits for loss
7 of a limb or --

8 MR. GELDER: No, it's not consistent
9 at all with the workers' comp. And it's not even
10 consistent with Social Security, although it's
11 more comparable to what they're looking at.

12 MR. LERNER: But what Mike said,
13 though, can't be lost, which is the rethinking of
14 how you reorganize the delivery system, because
15 the previous focus on institutional care is not
16 only always the most humane and dignified way to
17 do it. It's not the most cost effective and it
18 certainly may not be the best for individual. So
19 there are new models that we ought to be thinking
20 about as we start to unravel this.

21 MR. BACKS: If I can make an
22 outside-the-box comment. That means that there's
23 70 percent able. And there's a large untapped
24 source of able elderly individuals who could be

1 enlisted in providing services to their cohorts.

2 MR. GELDER: Right.

3 MR. BACKS: They are able to make it
4 to Florida, they're able to make it to the casino.
5 I take care of them, by the way.

6 MR. GELDER: And not even looking at
7 that -- I mean, one of the concerns especially, we
8 look at employment as well of people over age 55.
9 And there are a lot of professions that are
10 concerned about the percentage of people who are
11 over age 50, over age 55 in those -- social
12 workers, particularly. Nursing. I mean, there's
13 a lot of professionals that are getting older.

14 MR. BACKS: Physicians.

15 MR. GELDER: Right. There's a lot of
16 professions that are aging as well.

17 But now they should be employed,
18 they should be used. They are caregivers. I
19 mean, they're taking care of their parents.
20 You've got a 65-year-old taking care of their 85,
21 90-year-old parents.

22 MS. PRINTEN: May I ask one quick
23 question? I know there's an older adult service
24 advisory board that came out with that report and

1 had recommendations about community-based care.
2 And I'm wondering if it might be helpful for us to
3 have that since they studied it?

4 MR. GELDER: Yes. I would be happy
5 to make that available. It's on our website, but
6 we can make nice, pretty colored copies for you as
7 well. I'll bring them in later today if I can.

8 MR. LERNER: Next on the agenda is
9 Margaret Stapleton, Shriver Center on Poverty Law.
10 Margaret has been a long-standing attendee at
11 these meetings.

12 For all the speakers, by the way,
13 we've got a schedule out here. If you can allow a
14 little time in your presentation for questions.
15 Thank you. Margaret.

16 MS. STAPLETON: Margaret Stapleton
17 from the Shriver Center on Poverty Law.

18 I'm officially speaking to you
19 today. I spoke, kind of wearing my hat as a
20 private person, at the hearings you had in Skokie
21 several months ago.

22 I'm going to make comments today
23 rather than a presentation. I think the Shriver
24 Center doesn't have any piece of new information

1 to tell you.

2 I have been to many of the
3 hearings. I've been to many of the presentations.
4 I wish we did. I don't think we have any great
5 new insights to give you, so my presentation is
6 going to be a number of comments.

7 The first thing I wanted to tell
8 you is why we're speaking today. Because we hope
9 the Task Force will really keep the needs of
10 low-income people in mind.

11 We're speaking under the special
12 population umbrella today because there are many
13 ways in which low-income people really are kind of
14 a special population. Mostly, because they don't
15 have the resources to do the things that people
16 similarly situated regarding healthcare could do
17 if they had more money.

18 We are, as you probably know,
19 kind of long-term supporters of any expansions of
20 healthcare for low-income people and long-term
21 fighters of any attempts to cut that back, through
22 both legislation and through litigation.

23 We supported creation of this
24 task force. We supported Kid Care. We support

1 Healthy Illinois. We support Universal Health
2 Care. We support whatever you come up with.
3 We're almost positive we'll do that.

4 We've also fought a number of
5 federal and state cuts in the federal government
6 programs, both legislatively and through
7 litigation.

8 Not to utilize statistics, I just
9 want to remind you of how many poor people there
10 are in Illinois, which is a lot. In 2004, which
11 is the most recent statistics that we could find,
12 almost 6 percent of people in Illinois were in
13 what you'd call deep poverty, that's under 50
14 percent of the federal poverty level.

15 12.4 percent, under 100 percent.
16 And the shocking figures, almost 29 percent --
17 almost 30 percent of the people in Illinois fall
18 below 200 percent of the poverty level. That's a
19 lot of low-income people. So we need to keep that
20 in mind, because some of these people are covered
21 by private insurance. Not many. Some --
22 actually, a substantial number. And some are
23 covered by government programs, but many are not.

24 And the next slide talks a little

1 bit about the -- what I'm going to do, I'm going
2 to talk about by group. who is and who is not
3 covered by government programs.

4 I have a few suggestions. well,
5 I only have two. well, things to include and
6 things to avoid in shaping an adequate healthcare
7 system.

8 I have a few suggestions on what
9 to include, only two on what to avoid. Then I
10 have a very short footnote on the safety net.

11 The first point is something that
12 I think you already know. I think this is
13 something that you all know. I think the public,
14 in general, doesn't know this.

15 The public I think, in general,
16 unless they or a member of their family or
17 somebody they know or somebody in the profession,
18 which they encounter in a professional way; there
19 are a lot of people out, people on the street,
20 people in their community who actually think if
21 you're poor, you get government subsidized
22 healthcare.

23 People are surprised that people
24 are not eligible for Medicaid because they're

1 poor. I think I told this story when I spoke in
2 Skokie about, you know, people who are very
3 surprised at the people who care for their elderly
4 relatives. The wonderful home care workers who
5 come in, who are themselves in the early 50s,
6 working hard. They don't have health insurance
7 and not eligible for Medicaid, even though they
8 are pretty poor.

9 The reason that they're not
10 eligible is because they don't meet any of the
11 special categories that make people eligible for
12 Medicaid.

13 But just a reminder, Medicaid is
14 available to people who meet certain eligibility
15 categories. Elderly, disabled. Totally,
16 permanently disabled. Very significant standard.
17 And you've heard the complaints from people about
18 their standard at a lot of hearings.

19 Pregnant women and families with
20 minor children. It's not available for people who
21 don't fit in one of those categories. A person
22 can be very, very sick, but if they don't meet the
23 disabled benefit definition, they're not going to
24 be covered.

1 And I think when people from the
2 AIDS Foundation speak to you later today, that
3 will be very, very clear about how stringent that
4 standard is. Those are just people who don't have
5 a child in their care.

6 The other thing I'd like you to
7 remember is that Medicaid can end when a status
8 changes. So when a child turns 19, that child is
9 no longer going to be covered for Medicaid. The
10 parent of that child is no longer going to be
11 covered for Medicaid once the child gets over 19.
12 So we have a lot parents who have been covered by
13 Medicaid, all of a sudden when their youngest
14 child turns 19, the parents are also without
15 insurance.

16 A disabled person who returns to
17 work may or may not get Medicaid, but I think HDA
18 is going to talk a little bit about a lot of the
19 kind of really expansions of Medicaid to cover
20 people who are coming off disability standards.

21 So when I talk about Medicaid, I
22 think of Medicaid as an island for low-end income
23 people. A lot of low-income people, 29.1 percent,
24 and only some of those have an island on which to

1 rest.

2 Then there's other government
3 subsidized healthcare programs. That kind of
4 disease specific or status specific. Breast and
5 cervical cancer programs, for example, have now
6 been expanded. Sometimes they're very limited.

7 The drugs, status-specific kind
8 of school health clinic. And again, those are
9 sort of more islands. So there are a lot of
10 islands, but -- and these islands are for some
11 people, some services, some of the time. So we
12 have a lot of islands. We don't have a mainland
13 for low-income people.

14 what we think will be the
15 components of the adequate healthcare system, we
16 really -- comprehensive, comprehensive,
17 comprehensive. Low income people simply do not
18 have the ability to pay for not-covered medical
19 services. They're not going to get them.

20 we increasingly think that with
21 low-income people, they get most of medical at
22 home with a primary care provider. We think it
23 needs to be accessible.

24 People who went to the hearings

1 downstate prefer the downstate mantra. If you
2 have a toothache, you don't just have a dental
3 problem, you have a transportation problem.

4 Low income people also need to
5 have some ability to get off-hours care. If
6 you're working a low-paying, pretty demanding job,
7 you're not going to have the flexibility to take
8 the afternoons off. You're working on an assembly
9 line or something, so both time and geography are
10 there.

11 Then we really think that any
12 plan has to teach patients new behaviors. Low
13 income people by and large -- not by and large.
14 Many low-income people who have not had the
15 benefits of having a medical home and access to
16 medical care on a middle-class basis, have a lot
17 of behaviors that really are their worst enemies.

18 They don't follow directions.
19 They don't come back. They don't understand.
20 They don't ask questions. They're afraid to ask
21 questions. They think they'll appear dumb if they
22 ask questions. Lots and lots of cultural and
23 psychological things.

24 Please avoid copayments. They

1 don't have the money to pay them, which I think is
2 hard for us. We've always got \$2 in our pockets.
3 Some of them don't.

4 SSI benefits for one person is
5 603 a month. TANF benefits, Temporary Assistance
6 for Needy Families. Mom or dad with two children,
7 396 per month for a family of three. Out of that,
8 they have to pay for everything and healthcare.
9 And if they get food stamps, they always run out
10 of food stamps around the 20th of the month. So
11 they're paying for housing, clothing, food out of
12 \$300 a month.

13 Please avoid financial incentives
14 to skip healthcare. Skipping is the problem
15 because they don't have the money. They won't do
16 well. So anything like health savings accounts,
17 or as I said, copayments. More people's daily
18 dilemma, choosing which primary to cover. Rent,
19 utilities, food, healthcare. They can't cover
20 them all.

21 And the last thing that I wanted
22 to say just a footnote on. Safety Nets and
23 Referral Systems did a wonderful presentation
24 about Illinois' truly terrific safety net systems.

1 I don't want to disparage them at all, but at
2 their best, it's simply not enough.

3 We've heard about people waiting
4 two years, 18 months for a colonoscopy when
5 they're presenting symptoms. It's not
6 comprehensive enough. It's not available
7 everywhere across the State.

8 Remember, what's available in
9 Cook County is -- in Cook County, the best of the
10 best. You get to some other counties in the
11 State, there's really not much of a safety net
12 system.

13 Referral systems. Again, you've
14 heard about the importance of referral systems,
15 getting people covered by benefits for which
16 they're eligible. But even the best referral
17 system often says there's nothing for you. We
18 can't give you. We can't figure out where you
19 should go. Go to the emergency room. That's it.
20 Thanks.

21 THE COURT: Questions for Margaret?
22 We've got time for a question or two.

23 MS. DAVID: One of the things that --
24 as we went around the hearings, we learned that

1 many of the doctors did not know about the
2 expansion Medicaid rates. And some of the
3 doctors, even though they knew, were not willing
4 to expand their services to new Medicaid people.
5 Has Shriver Center addressed that?

6 MS. STAPLETON: Well, we have, along
7 with Health and Disability Advocate -- and
8 Stephanie can probably answer this question even
9 better than me.

10 The Shriver Center and HD brought
11 a lawsuit challenging the problems in the early
12 and periodic screening and diagnostic programs
13 which were caused, in large part, by how low the
14 Medicaid rate was for pediatricians.

15 We had special legal handle the
16 Federal EPSU Statute and prevailed in that case to
17 get the State to raise the rates for pediatricians
18 and related services for children.

19 We don't think we have a legal
20 handle for other issues about the Medicaid rates.
21 I mean, that's a very big problem. I think that,
22 you know, the government expansion of Kid Care to
23 cover all kids is sort of a big step in continuing
24 forward on the engine of the higher Medicaid rates

1 for pediatricians.

2 I wish Ann Marie Murphy were here
3 to answer the question about the other rates.

4 MR. LERNER: Well, from a provider
5 point of view -- I mean, at our place, its \$.39 on
6 the dollar on costs. Payment and costs. I mean,
7 it's just ridiculous.

8 And one of the things we'll get
9 to at 2:30 is how we look at the financial
10 incentives and the financial payment issue as we
11 think about expansion of coverage and expansion of
12 beneficiaries.

13 There may be a whole other
14 subtext of socioeconomic, racial, ethnic,
15 cultural, language issues that underlie that, but
16 we've got to get over the financial hurdle, too.

17 Not only the financial incentives
18 have to be put in the right place for the
19 population, but the financial incentives have got
20 to be put in the right place for people providing
21 the service. So we've got a long road to go on
22 that one.

23 MS. STAPLETON: And I think that
24 because the bottom line there is -- maybe we

1 should have said the age of cost shifting is over.
2 You know, the State can no longer cost shift.
3 Neither the State nor the federal government can
4 cost shift for Medicare and Medicaid after private
5 insurance.

6 So the game is up, as my father
7 would have said.

8 MR. LERNER: Last question.

9 MR. BACKS: Just more of a comment.
10 Just to be careful that solving one problem in
11 terms of reimbursement to pediatricians through
12 litigation, exacerbates a problem in other areas,
13 and affects access in other areas.

14 So the real problem is the
15 champagne tastes on a beer budget when it comes to
16 healthcare. Everybody desires everything, but
17 nobody wants to pay.

18 MR. LERNER: Yeah. We're going to
19 take a broad swat at this one. Thanks, Margaret.

20 MS. STAPLETON: Thank you very much.
21 Thank you, by the way, for all your wonderful
22 work. I'm actually going to leave. I have a day
23 job.

24 MR. LERNER: I'm not sure we can go on

1 without you.

2 11:15. David Munar, did I
3 pronounce it correctly? Associate Director of the
4 AIDS Foundation of Chicago. Thank you very much
5 for joining us today.

6 MR. MUNAR: Good morning. Thanks for
7 this opportunity to address you. And thank you
8 for your important work.

9 My name is David Munar. I'm the
10 Associate Director of the HIV AIDS Foundation of
11 Chicago.

12 I wanted to give you a brief
13 overview of HIV and issues facing Illinois today
14 on National HIV testing day. And I also want to
15 commend you for your work and look forward to your
16 recommendations.

17 Just starting out, I want to give
18 you a brief overview of where we're at 25 years
19 into the HIV AIDS epidemic. There's been more
20 than half a million Americans who have died due to
21 aids-related causes.

22 And we actually quietly turned
23 the corner on half a million deaths last year.
24 And in Illinois, there's been nearly 20,000

1 AIDS-related deaths. About 12,000 in Chicago.
2 Since the mid 90s, with the development of highly
3 active anti-retroviral therapies, that's declined
4 dramatically.

5 And in Chicago, we're down to
6 several -- sort of a few hundred deaths a year,
7 from a peak of nearly 2000 in the mid 90s. But
8 nationally, there's still about 16 to 17,000
9 AIDS-related deaths a year. So HIV remains a
10 chronic, incurable condition.

11 According to the Centers for
12 Disease Control and Prevention, there's over a
13 million Americans living with HIV currently. And
14 that's as of 2003, so it's twice as much higher
15 now.

16 Our estimates for Illinois is
17 that it's likely 42,000 or more. In Chicago
18 alone, it's probably around 33,000. And the bulk
19 of the epidemic is in Chicago, so Chicago counts
20 for 67 percent of HIV AIDS epidemic in the
21 Illinois. In the metro area, it's about 87
22 percent of the HIV AIDS epidemic in Illinois.

23 Actually, it's worth noting that
24 according to the CDC, about a quarter of those 1.1

1 million individuals living with HIV don't know
2 their HIV status, which is why preventative
3 services are so critical. Why things like
4 National HIV testing day are important. The
5 opportunity to promote testing acceptance.

6 There's about 40,000 HIV
7 infections that occur each year. This is probably
8 the low end of the spectrum. We're actually going
9 to receive data later this year from the CDC
10 substantiating -- getting a little better picture
11 of this. And an Emory University professor thinks
12 it could be as high as 60,000, so this could be
13 very low.

14 Based on the 40,000, we believe
15 Illinois' share of this is at least 1600 new HIV
16 infections a year, the bulk of which, as you see,
17 are in Chicago.

18 So HIV is really a story of
19 disparity, as you will see from the next couple of
20 slides. Actually, Dr. Whitaker, the health
21 department director, unveiled data yesterday that
22 showed that 62 percent of AIDS cases diagnosed in
23 2005 were among individuals between the ages of 24
24 and 34, which means those infections occurred

1 approximately ten years earlier.

2 And according to the CDC, half of
3 those 40,000 new infections that occur annually
4 are among individuals that are aged 24 or younger.
5 And HIV AIDS is still the leading cause of death
6 for African-American women ages 25 to 34. It's
7 among the leading cause of death for
8 African-American men.

9 And in a five-city study
10 conducted by the CDC two years ago, they found one
11 in four gay and bisexual men surveyed, was living
12 with HIV. Looking at only African-American men
13 surveyed, it was one in two, 46 percent.

14 This gives you a -- as you'll
15 see, the trends are pretty constant. When you
16 look at both Chicago, Illinois and the United
17 States, the epidemic among those living with HIV,
18 about half of all cases are among
19 African-Americans. About 15 to 17 percent are
20 among Latinos.

21 The proportion among Caucasians
22 is steadily decreasing. It still is about a third
23 of those living with HIV. It's still
24 predominantly men, but the proportion is steadily

1 increasing among females.

2 And every way you look at the
3 epidemic, it still continues -- the mode of
4 transmission that contributes most to new cases
5 and those living with HIV, is still male sexual
6 contact with other males. As you can see from the
7 previous slide, it was one in four. You can
8 understand how that's true.

9 So in the United State, it's
10 about 45 percent. In Illinois, it's about half of
11 all cases are among men having sex with men.

12 Injection drug use continues to
13 be a leading contributor to cases of HIV, although
14 recent data in the last two years has shown
15 continued decline in the number of cases related
16 to injection drug use. And likely the result of
17 efforts across the State to promote sterile
18 injection equipment availability.

19 There's ample data that I won't
20 go into, which show a strong correlation between
21 poverty, homelessness, or a high risk of
22 homelessness, mental illness, incarceration.

23 Populations that have a family
24 member or in a community of high rate of

1 incarceration, as well as individuals that are in
2 and out of prisons and jails.

3 And AIDS stigma continues to be
4 one of the biggest drivers, as well as other forms
5 of prejudice.

6 Sexually transmitted infections
7 also contributed to the spread of HIV by
8 increasing the infectiousness of an individual as
9 a sexually transmitted infection, as well as
10 vulnerability of those who have an STD.

11 For the purposes of this group, I
12 thought this was an important slide to see how
13 people living with HIV in the United States
14 receive their care.

15 And about half of them receive no
16 care at all for HIV. And the private sources,
17 private programs are the most significant
18 categories of care.

19 Private insurance is only 15
20 percent. The Ryan White Care Act, which is kind
21 of the nation's flagship response to HIV AIDS, and
22 it received scarcely any new funding in the last
23 eight years, is about 12 percent of the medical
24 care and medications covering people living with

1 HIV.

2 And Congress is right now looking
3 at reauthorization legislation for that program.
4 And we're not anticipating any increase in dollars
5 for the care in the period ahead even though cases
6 continue to climb.

7 And as you know, these other
8 categories, including private insurance, Medicaid,
9 Medicare, also have barriers, including the
10 cost-sharing issues that Margie described, that
11 make them not comprehensive.

12 For Illinois, I just want to give
13 you a quick slide about where funding comes from.
14 Most of Illinois' funding for -- federal funding
15 to respond to AIDS is the Ryan White Care Act, and
16 is about 75 million. This slide does not include
17 Medicaid and Medicare federal contributions that
18 are likely double the amount that you see here,
19 and are the largest categories of federal funding.

20 The other categories here, the 22
21 is for preventive services. The 9.9 is for
22 housing assistance. Then mental health and
23 substance abuse services is about 3.1 million
24 directly related to HIV AIDS response.

1 This will give you a narrative
2 about those categories. One portion of the Ryan
3 White Care Act that is really essential to our
4 safety net is a state and federal program called
5 "The AIDS Drug Assistance Program." It's about a
6 \$40 million program.

7 Illinois actually just -- the
8 legislature, the government just raised the
9 appropriations by 2.5 million for that program.
10 About 3500 Illinoisans receive their HIV AIDS
11 medications through this program. It's limited.
12 It's not a comprehensive program. It's only
13 HIV-related medications.

14 It's payer of last resort. So
15 for many people -- for many people that are
16 long-time users of the AIDS Drug Assistance
17 Program. Others are on the program as they wait
18 for Medicaid eligibility or for other services or
19 when private insurance is no longer available.

20 Just a couple of recommendations
21 I wanted to echo as you start your deliberations.
22 As Margie said, one of the biggest areas that we
23 see is the way the Medicaid program is structured.
24 Individuals who are living with HIV must become

1 disabled by HIV before the program will actually
2 pay for the very medication that could prevent
3 disability.

4 And so, we're very interested in
5 Illinois exploring a waiver to expand Medicaid
6 coverage for individuals, low income individuals
7 living with HIV who are predisabled.

8 Massachusetts has secured such a
9 waiver, so has the District of Columbia and the
10 State of Maine.

11 This is not an easy effort to
12 undergo, but we think it's worthwhile. And our
13 back-of-the-envelope estimates are that at least
14 10,000 HIV positive Illinoisans are uninsured in
15 this state.

16 I wanted to just echo how
17 important the Cook County Health Care System is to
18 AIDS care. The Core Center bears Ruth Rothstein's
19 name, and it's the largest -- between the Core
20 Center and Provident and the Ambulatory Care
21 Center and Stroger Hospital, it's the largest
22 provider of HIV medical care in the State. It's
23 absolutely subsidizing all our other systems and
24 keeping our AIDS Assistance Program strong.

1 And we're very concerned about
2 reductions in Medicaid funding to the county.
3 That could put the very essential safety net in
4 Cook County in jeopardy. Effect not only the care
5 for those in Cook County, but really statewide.

6 Again, just echoing how important
7 the AIDS Drug Assistance Program has been.
8 There's been a long-time commitment in the State
9 to this program and keeping it strong. But we
10 anticipate that with more people progressing in
11 their HIV disease, more people becoming infected,
12 the need will continue to grow.

13 Care for HIV averages around
14 \$12,000 for just the medications. And individuals
15 typically, depending on their different needs, can
16 need anywhere from 18 to \$21,000 worth of
17 medications, so it's a very costly condition.

18 Echoing some of the
19 recommendations that have come from others of the
20 group. We absolutely would like to see an
21 expansion of the health benefit for workers and
22 disabilities. The right to Medicaid Buy-In
23 Program. We think this is a very effective way of
24 reaching more people who are disabled and

1 interested in coming back to the work force either
2 part-time or full time.

3 The High Risk Pool Insurance
4 Program. I've seen it in recommendations. It's
5 growing inaccessible and unaffordable for many
6 people. The premiums are too high. The cost
7 sharing is too high. If there were reforms to
8 this program, it could be an effective way of
9 covering people with HIV and other chronic medical
10 conditions.

11 Small businesses, including my
12 own, it includes -- it covers people living with
13 HIV like me, really face very steep annual premium
14 increases that make care very unaffordable. And
15 any reform that helps small groups could go a long
16 way at expanding coverage in Illinois.

17 And finally, I just wanted to say
18 how important prevention is. Really, I wanted to
19 ask you not to just focus on healthcare needs, but
20 also take in the lens of prevention. And every
21 case of HIV we can prevent, really would be a
22 savings to our whole system and will help us
23 expand coverage.

24 And there's a whole range of

1 approaches, science-based approaches, including
2 comprehensive sex ads. Needle exchange and needle
3 availability. Condom distribution, family
4 planning. Other behavioral intervention targeting
5 high-risk groups. Social marketing program.
6 Programs targeting prisoners and ex-prisoners.
7 The Core Substance Abuse and Housing Programs are
8 essential for prevention.

9 MR. LERNER: Thank you very much. We
10 have time for a question or two? Covered nice
11 ground. Thank you very much. We really
12 appreciate it.

13 It's 11:30. Sessy Nyman, vice
14 president of Public Housing Government Relations.
15 Thank you very much for joining us.

16 MS. NYMAN: Thank you for having me.
17 I'm going low tech. I've got no PowerPoint. I'll
18 make up any time that you are behind today.

19 I'm Sessy Nyman. I'm with
20 Illinois Action Program. We are a statewide
21 public policy program working with low income
22 families with young children ensuring quality care
23 and affordable care is available to all children.

24 We work with the child care

1 Assistance program run by the Department of Human
2 Services, serving approximately 187,000 children
3 per month, per year. And at Action for Children,
4 we work directly with families as child resource
5 and referral in Cook County.

6 We average about \$400 million a
7 year in payments directly to low income families
8 using the Child Care Assistance Program. And we
9 also provide assistance, technical assistance and
10 training to approximately 65,000 families and
11 people in the work force.

12 I want to talk a little bit today
13 more broadly about simply bringing the attention
14 of the child care work force.

15 Illinois has been blessed in the
16 last couple of years to give a lot of attention --
17 we've been giving a lot of attention to young
18 children, particularly young children outside of
19 their home who are in need of child care services,
20 or the ones who are able to benefit from high
21 quality access to pre-k.

22 What we haven't talked a lot
23 about are the people that are caring for those
24 children. And so we want to talk a little bit

1 about the work force needs today.

2 There are no federal or state
3 funding that provides health insurance benefits to
4 the child care work force. So we have, again,
5 187,000 children who are low income, high risk, in
6 the care outside their home, either in a child
7 care home or child care center. And their child
8 provider, their teacher, the person taking care of
9 them, for oftentimes 40 hours a week, oftentimes,
10 about 44 percent of them have no access to health
11 insurance.

12 For those people who do have
13 access to health insurance, it's oftentimes
14 through their spouse or they also -- about a third
15 of that work force is eligible for family care.

16 So we've gotten a lot better.
17 Most and more of those families or providers have
18 gotten access to health insurance, but it's still
19 not enough.

20 And we know that there's direct
21 access to young children when those providers
22 don't have access to preventative healthcare, that
23 they use the emergency room as their primary
24 healthcare home. We know those children are also

1 at risk.

2 So as we talk about the
3 well-being of young children and we invest dollars
4 into their education in terms of pre-K and birth
5 of free programs, we definitely want to think
6 about the health of those children as they grow up
7 when we think about the health of the provider.

8 You have a packet of information
9 in front of you, so I'm going to be really brief.
10 I'll just point out a couple of things within your
11 packet.

12 Again, approximately 43 percent
13 of home family child care providers do not have
14 access to health insurance. Thirty-three percent
15 of those providers working in a center-based
16 program do not have access to health insurance.

17 In 1999, Massachusetts did a
18 survey and found approximately 45 percent of the
19 uninsured child care work force used the emergency
20 room at least once in the last 12 months as their
21 primary healthcare home.

22 So really, some main points we
23 want to talk about -- actually, Illinois Action
24 for Children is a member of the Healthy Illinois

1 campaign. So really, when we think about child
2 care, we don't really see a successful legislative
3 campaign going to the general assembly saying we
4 think a child care provider should get health
5 insurance over all the other uninsured population.

6 what we really want to do is
7 bring the child care work force to the table when
8 we think about uninsured, when we think about
9 small businesses, when we think about the
10 nonprofit community who won't benefit from a tax
11 break if that's the recommendation.

12 Thinking about those providers --
13 and we can talk about all health human service
14 providers out in communities taking care of the
15 indigent, the elderly, the young.

16 we really need to think about the
17 work that they do, the services they provide the
18 families and children in the communities in
19 general. And really, how do we come up with a
20 plan that incorporates all of those populations.

21 And so our job at Actions for
22 Children is to make sure the child care providers
23 are part of that conversation, so we may have a
24 health insurance plan that supports or includes

1 small businesses.

2 Oftentimes child providers, both
3 home, as well as center-based providers would be
4 included in that. And we think that that is an
5 important step.

6 There's been a legislation in the
7 general assembly a couple of years ago that looked
8 at small businesses specifically. And we worked
9 with them to include child care providers as part
10 of that legislation. It didn't go anywhere, but
11 it's important that we continue to have them at
12 the table.

13 In Congress, for three or four
14 years, there's been legislation introduced that
15 would look at the Rhode Island model that really
16 does something directly for the child care work
17 force in terms of including them for those
18 providers that care for low income children
19 through the child care -- through child care
20 centers, that they would have access to the State
21 child care health insurance program.

22 So there are models out there
23 that have really taken into consideration those
24 providers that are caring for small children. The

1 health of that provider directly impacts the
2 health of those young children.

3 And we know that particularly for
4 those providers that are caring for low-income
5 high-risk children in high-risk communities, that
6 the healthcare needs of those children are
7 substantial. So the most that we can do, the most
8 thoughtful we can be in terms of thinking about
9 the prevention is an important one.

10 So really, just to bring the
11 child care work force to the forefront of your
12 mind as you move into the final stages of your
13 task force process. And I want to leave you with
14 a couple of final points.

15 The affordability is clearly a
16 significant issue. And I think Margie talked
17 about the comprehensiveness. We really want to be
18 comprehensive when we think about child care
19 programs for the child care work force in terms of
20 health insurance.

21 The affordability issue is a big
22 one. California has tried a couple of different
23 models that shows when the cost sharing is too
24 significant, too substantial for the

1 beneficiaries, that they can't participate.

2 The average salary for a child
3 care provider is less than \$9 an hour. These are
4 families that are often low income themselves.
5 They're oftentimes -- many times they have parents
6 themselves. They oftentimes qualify themselves
7 for the Child Care Assistance Program, which is an
8 income-based subsidy program to help pay for child
9 care. So the affordability issue is a significant
10 one for the child care work force.

11 It must be -- again, thinking
12 about the larger -- not just about child care, but
13 about the larger small business. So that might be
14 the way to approach it.

15 When we think about health human
16 service providers, we want to think about the
17 not-for-profit community, those families -- those
18 programs and communities that are serving
19 low-income, high-need populations. That if we do
20 whatever recommendation that you all make, to take
21 that population into consideration.

22 I know a senator a couple of
23 years ago brought in a group of people to sit
24 together to really think about this. How do we

1 support the not-for-profit community that
2 oftentimes does not benefit from any kind of tax
3 break or tax incentives that are out there for the
4 corporate community.

5 The turnover in child care is one
6 of the biggest indicators of not a high-quality
7 program. So we know that children will benefit
8 when their child care provider is there all year.
9 My daughter is just finishing her first year in a
10 child care center. She's two and she's had the
11 same teachers all day -- all year.

12 The impact that that's had on her
13 is significant. The year before, they had three
14 different teachers in that program. Imagine if
15 your third-grader came home and said, "Guess what.
16 I've got a new teacher today." well, that's the
17 third one this year.

18 We don't think that that is
19 acceptable for K through 12 education. We also
20 don't think it's acceptable and brain research
21 tells us it's not good for young children. And
22 yet, if there's one provider that can manage to
23 provide health insurance down the street and my
24 child program doesn't, if we think my kids -- my

1 kid's teachers aren't going to leave the first
2 chance they get, we're wrong because that's what
3 they're looking at.

4 And so we need to think about the
5 comprehensive. It's not just program for program,
6 but thinking about how do we really address the
7 work force needs for child care.

8 Healthy providers make for
9 healthy kids. Also, for the family child care
10 work force where the majority of children are in
11 the State of Illinois, we really want to think
12 about those children and how do we again,
13 incorporate the family child care provider, a
14 self-employed person working out of their home.
15 And how do we address their healthcare needs as
16 well.

17 So again, I just wanted to bring
18 the issue of the child care work force to you
19 today. You have a package of information. We did
20 a pretty lengthy study a couple of years ago at
21 Action for Children. We looked at other states,
22 looked at the different models that have been
23 tried and true.

24 Nothing is perfect, but I think

1 as you collect your information and bring together
2 all the different factors to be included, I
3 appreciate your thinking about the child care work
4 force and the larger not-for-profit human service
5 providers out there and the needs they have, the
6 ongoing need.

7 There are no funding structures
8 out there. And clearly they don't have a very
9 strong lobby in terms of making sure they're going
10 to be the ones to get child care or get
11 healthcare. But we appreciate your considering
12 us.

13 So I welcome any questions.

14 MR. LERNER: Thank you, Miss Nyman.
15 wonderful presentation. Questions?

16 MS. DAVID: Do you have any ladderling
17 for the staff so they would accelerate their job
18 titles in order to get insurance? Is there a
19 ladderling process?

20 MS. NYMAN: There's no incentive for
21 providers, for a center director to offer health
22 insurance, if that's what your question is. So
23 there's nothing right now that does that.

24 There have been conversations

1 about, you know, higher compensation for the work
2 force or for the program if they do offer some
3 type of health insurance benefit, they would be
4 looked upon differently. But right now, that
5 would also only be specific for the people that
6 are cared for through the Child Care Assistance
7 Program.

8 So we talk about the larger kind
9 of child care work force. I mean, we focus on the
10 low income population that needs child care and
11 the directors that serve those families. But
12 right now, there is nothing in place that could
13 kind of incentivize a program that would offer
14 health insurance.

15 MR. LERNER: Ruth.

16 MS. ROTHSTEIN: How many of these
17 healthcare workers are organized into a union?

18 MS. NYMAN: SCIU last year did
19 finalize a collective bargaining process with the
20 State. They represent the 49,000 family child
21 care providers that are kind of right now
22 registered as family child care providers.

23 Those include those licensed
24 providers, those licensed by the Department of

1 children and Family Services, as well as kind of
2 what we call "kip and kin," are license exempt.
3 The grandmother, the sister, the neighbor who
4 takes care of three children or less in their
5 home.

6 MS. ROTHSTEIN: Are their
7 salaries better than those who are not organized?

8 MS. NYMAN: There was as part of the
9 collective bargaining agreement, a 35 percent
10 overall rate increase at the end of their 39-month
11 agreement with the State.

12 The largest increase came for
13 those licensed-exempt providers that got a dollar
14 -- right now -- traditionally, the rate for
15 licensed exempt providers in Illinois has been
16 \$9.48 a day, per child. Not an hour, a day.

17 well, somebody said that's not so
18 bad. I said it's a day. A day per child. So
19 they got a dollar increase. The licensed family
20 child care providers got a slightly smaller, but
21 significant increase. And we were able to reach
22 parity so the center-based providers did get a
23 similar rate increase.

24 They do have as part of their

1 39-month agreement, some dollars that will be
2 invested in year two and three into a health
3 insurance fund. That, again, will just cover the
4 family child care work force. And they're not
5 clear yet as to what percentage of the work force
6 would be covered.

7 I think the State investment at
8 the end of the 39-month agreement is \$27 million,
9 so it's unclear how much will 27 million buy for a
10 \$49,000 membership.

11 MS. ROTHSTEIN: Thank you.

12 MR. LERNER: Great presentation.
13 Thank you very much. Really appreciate it.

14 The next presenters are Stephanie
15 Altman and Stephanie Becker from the Health and
16 Disability Advocates.

17 MS. ALTMAN: Actually, I'm going to
18 skip who we are and what we do. All that's in the
19 slides, since you guys are at the end of your
20 morning from hearing from everybody.

21 And Stephanie is going to present
22 all this wonderful research and data on the stable
23 population. But I think I'm just going to tell
24 you why we do what we do.

1 I'm going to tell about a typical
2 client. She's also a friend of mine, and a
3 neighbor of mine. And you might say well, this is
4 an atypical client, but she's not. We don't have
5 atypical client.

6 This is somebody who is disabled
7 and uninsured or was disabled and uninsured in
8 Illinois, and it might surprise you.

9 Her name is Julie. She was 31
10 years old. This was 2001. She's a neighbor of
11 mine. Our kids were in kindergarten at the time.
12 She had her second child. She was freelancing as
13 a public relations person, had no health
14 insurance. Her husband had health insurance
15 through his job. He was working for a real estate
16 company.

17 They live in Wilmette. He was
18 going to grad school at the time. He decided
19 to -- about July of 2001, he decided he was going
20 to finish grad school in August. He quit his job
21 in June. They decided not to Cobra their health
22 insurance because he could buy insurance cheaper
23 for them on the private market.

24 They waited about 63 days, maybe

1 68 days, just couple of days past the Health Care
2 Affordability Act Requirement. And guess what
3 happened? September 11th.

4 He could not find a job to save
5 his life in the financial industry. He just
6 graduated with an MBA from the University of
7 Chicago. There wasn't a job to be had in Chicago,
8 and she got diagnosed with multiple sclerosis.
9 This happened in two weeks.

10 Their life falls apart. She's
11 completely uninsured. Brad and the kids could
12 easily buy private insurance through a private
13 insurance company. They write to 35 companies.
14 Nobody will cover her. Not a chance she'll be
15 covered.

16 They tried the ICHIP program.
17 It's too expensive. They have no income right
18 now. He's got no job. He just graduated from
19 grad school. He quit his prior job. And she
20 can't get a job right now because she's right in
21 the second episode, which actually diagnosed her
22 with multiple sclerosis. She had had an earlier
23 one when she was 24. She has no vision for two
24 months. She can't walk. She's got a -- she

1 cannot go back to anything.

2 So she goes to pharmaceutical
3 companies. They give her drugs free for the first
4 three or four months. He finally, in December,
5 finds a job with the City of Evanston which he
6 takes at \$42,000 a year, way less than he thought
7 he would make.

8 Barely covers mortgage, because
9 they have an insurance that will not --
10 preexisting condition on her. He works for a year
11 and a half in order to get her 12 months of
12 certifiable coverage, then she's able to move on.

13 Think it can't happen to you? It
14 can happen to you. And that is a typical client,
15 in some ways. Even though they are not low
16 income, they were low income at that moment. They
17 have no way of accessing insurance, even as they
18 borrowed, begged, steal. And they had no plan
19 that that would happen to them.

20 Many people are in that
21 situation. You can say well, they should have
22 Cobra'd and they shouldn't have let it go 63 days.
23 But they didn't know that and they didn't know
24 that perfect storm was going to happen to them at

1 that second.

2 We have lots of clients with
3 equally different circumstances and factual
4 situations. And that's why we do what we do. And
5 we'll give you some statistical data on who the
6 population really is.

7 But the proposals that we put
8 together that we suggested to the Task Force, some
9 of which have been mentioned today, would have
10 helped Julie in several different ways.

11 One, there would have been
12 potential subsidization of their Cobra insurance
13 had they taken it. ICHIP subsidization. Perhaps
14 she could have gotten a subsidy to get on the
15 high-risk pool for the couple of months when they
16 had no income.

17 Also the purchasing pool would
18 have been open to her possibly, with a small
19 preexisting exclusion, perhaps not. But it would
20 have been private insurance that she could have
21 accessed for a lower cost and that she actually
22 could have gotten medical underwriting.

23 So I just wanted to leave you
24 with that. And Stephanie will talk a little bit

1 about our research. You can read more about
2 Health and Disability Advocates on our slide and
3 on our web site, obviously.

4 MS. BECKER: I'll start out with
5 generalizing a bit about subpopulation of
6 uninsured, and the disabled population.

7 And it really depends -- when you
8 try to look at how many uninsured and disabled
9 people there are Illinois, it depends on the
10 question asked.

11 And so the CPS survey, one of the
12 surveys we use, has a very narrow question. It
13 says, "Does anybody in this household have a
14 health problem or disability which prevents them
15 from working or which limits the amount of work
16 they can do?"

17 And if you take that question, in
18 addition to the question of how many people who do
19 not have coverage at this point, that yields
20 89,000 adults in Illinois who are disabled and
21 uninsured.

22 If you'll look at the BRFSS
23 survey, which is the CDC survey in Illinois, they
24 ask two questions that are more broad. " Are you

1 limited in any way to any activities because of
2 physical, mental or emotional problems?" And do
3 you now have -- you can answer yes to either of
4 this.

5 "Do you now have any health
6 problems that require you to use special
7 equipment, such as cane, wheelchair, a special bed
8 or a special telephone?" That yields over twice
9 as many adults who are uninsured and disabled."

10 Next I want to talk a little bit
11 about some of the things we mentioned today, but
12 where people with disability do get their health
13 insurance?

14 This chart shows that disabled
15 adults disproportionately receive insurance through
16 government programs, primarily Medicaid and
17 Medicare. Only 30 percent of disabled adults get
18 their health insurance through private, meaning
19 both group and individual coverage.

20 This is not surprising since
21 private coverage is structured for healthy,
22 working populations, and rarely provides the
23 adequate coverage for people with disability.

24 On the contrary, you see that

1 most nondisabled adults, 77 percent, get their
2 coverage through private insurance.

3 This slide shows that over
4 one-third of all Medicaid payments in the State
5 are for blind and disabled individuals, even
6 though they only account for only 12 percent of
7 all Medicaid beneficiaries in the State.

8 This is, in part, because the
9 needs of people with disabilities are often
10 expensive. They rely on Medicaid for both acute
11 and medical care. And a sense of community-based
12 and institutional long-term service support, some
13 of which Mr. Gelder was talking about.

14 In our analysis, we looked at
15 uninsured people with disabilities across the
16 State along a number of socioeconomic and
17 demographic variables.

18 This slide shows the percent of
19 disabled adults without health insurance in
20 specific geographic regions in the State. For
21 example, about one in four disabled adults in the
22 collar counties are uninsured compared to almost
23 one in five in Cook County.

24 Although we were continuing to do

1 some analysis about this, one explanation could be
2 that the people with disabilities in the collar
3 counties are not quite as poor as the people with
4 disabilities in Cook County; therefore, they
5 aren't eligible for Medicaid.

6 In this slide we start looking at
7 the uninsured population in Illinois compared to
8 disabled and non-disabled adults along income
9 lines.

10 As you heard, people without
11 health insurance tend to be lower income than
12 people with the best healthcare coverage; however,
13 that's even more of the case with people with
14 disabilities.

15 People with disabilities are most
16 likely to be low income or near low income than
17 those without disabilities. The trend switches
18 for those who are above 300 percent of the federal
19 poverty level, where people with disabilities are
20 more likely to have coverage. And this is
21 presumably because the disabled adults need the
22 health insurance more than the nondisabled
23 individual. So if they have the means to purchase
24 it, they often do.

1 This slide shows that not only
2 are uninsured disabled adults more likely to be
3 low income, they're more likely to be unemployed.
4 And high rates of unemployment among people with
5 disabilities limits their access to
6 employer-sponsored insurance.

7 At HDA, we work on local,
8 regional and national initiatives to enable people
9 with disabilities to return to work. This slide
10 shows even when disabled individuals are employed,
11 they still are more likely to lack insurance than
12 people without disabilities.

13 For example, the first bar for
14 those who are employed for wages, 17 percent of
15 disabled individuals still do not have health
16 insurance compared to 13 percent of nondisabled
17 individuals.

18 The discrepancy is even greater
19 than those who are self-employed. Of those who
20 are self-employed, 26 lack healthcare coverage
21 compared to 50 percent of those who are
22 self-employed and not disabled.

23 This is not surprising. As we
24 know, it's much more difficult to get insurance if

1 you're self-employed, particularly if you have a
2 preexisting condition.

3 This slide looks at the lack of
4 healthcare coverage and educational level
5 completed of disabled and nondisabled adults.
6 There's a lot of information on the slide, but
7 basically, it illustrates that being educated is
8 somewhat of a protective factor against being
9 uninsured, both for disabled and nondisabled
10 individuals.

11 The lack of health insurance goes
12 down as the level of education completed goes up.
13 It also shows that education is not as much of a
14 protective factor as the more disabled.

15 The last two bars on the right
16 show of those adults with a college education,
17 disabled adults are almost twice as likely to get
18 insured than nondisabled adults.

19 And as Stephanie mentioned at the
20 beginning with her story, really being disabled
21 and being uninsured can happen to anyone.

22 And Stephanie also mentioned how
23 the Consumer Health Care Program, any healthcare
24 proposal that the Task Force considers needs to

1 prioritize the needs of the disabled. And here
2 are three specific examples which Stephanie
3 already mentioned. So I'll leave you with that.

4 MR. LERNER: Questions for Stephanie
5 or Stephanie?

6 I have one. HDA, do you have a
7 position on mandates, on individual mandates for
8 insurance, whether there should be mandates or
9 shouldn't be mandates?

10 MS. ALTMAN: Well, in the proposal
11 that we proposed to the Task Force which -- I'm
12 sorry. In the proposal that we proposed to the
13 Task Force in cooperation with the Campaign for
14 Better Health Care International Partners, is the
15 position that we take, which is that if necessary,
16 individual mandates is a secondary step that would
17 need to be instituted if offering healthcare
18 coverage for all does not succeed in all accepting
19 or taking healthcare coverage. So we created a
20 secondary step, perhaps a necessary step.

21 MR. LERNER: Because in your story
22 about the young lady from Wilmette, some type of
23 mandate that would have forced the issue, to at
24 least assist them with the coverage. That then,

1 if they lost their income, they could have been
2 supplemented later. would have taken out the
3 whole issue of preexisting conditions and
4 everything else.

5 MS. ALTMAN: Absolutely. You know,
6 Julie is the first one to tell you she made a dumb
7 mistake. And had she known what she knows now,
8 she wouldn't have done that. But we know a lot of
9 people who do that. Educated people, etcetera.
10 So you're right, the individual mandate, as well
11 as more available options.

12 what happens is once you hit that
13 crux, sometimes then there's no available option.

14 MR. LERNER: I understand that. I'm
15 not really trying to pick on her. My point is
16 that if we go from where we are today to the
17 panacea, whatever the panacea is, then I'm not
18 going to worry about that. But more than likely,
19 we're going to have a step-wise process here.

20 So the question is how do you
21 build these bridges or Band-Aids in there to make
22 sure you've got your outcome in place, but you're
23 still creating the right incentives for those
24 providers and people with the insurance company

1 and everybody else. I mean, that's all I was
2 suggesting.

3 MS. ALTMAN: I agree with you.

4 MS. DAVID: What about the expansion
5 and rollout? What are you doing to get the
6 doctors to accept the Medicaid rate in the
7 southern section and the northern section and the
8 central section of Illinois?

9 And for those who say they're not
10 going to do it, has there been any discussion with
11 the department to give incentives for them to do
12 it?

13 MS. ALTMAN: Two things on
14 reimbursement rates.

15 I mean, one, as Margie as said,
16 we had a legal hook on pediatric rates, and that's
17 why we filed the lawsuit on pediatric rates.

18 Whether politically, rates for
19 adults will fall, that's more of a political
20 issue. There's no legal hook for adult rates
21 right now in terms of reimbursement hike.

22 The state has done a few things.
23 One, they raised pediatric rates above cost, which
24 is a huge thing, and hasn't been done before. So

1 they actually raised it to 89 percent of the
2 Chicago Medicare rate which is above costs for
3 providers. And for downstate providers, that
4 translates to 118 percent of the Medicare rate.
5 So that's one important step, I think, forward.

6 The second thing the State has
7 done, and I'm not apologizing for the State here,
8 but the second thing they have done in the new
9 Disease Management program and the new Primary
10 Care Case Management Program, for both providers
11 of adults -- for adults and children, they have
12 offered or are offering a per-month, per-member
13 amount to managed care between 3 and \$5, depending
14 if it's a child or adult with disability or an
15 older adult.

16 That amount, even though it
17 doesn't sound like much, in prior years actually
18 has been somewhat an incentive for physicians to
19 manage the care of their patients, because overall
20 for a whole caseload, that's still an increase per
21 month.

22 Then there's a third thing, which
23 is a bonus system that's been put into place for
24 pediatric providers. Again, to give them a \$30,

1 per-member, per-month -- per-year, per-member
2 amount based on providing all care.

3 So there are financial incentives
4 built into the system. I agree with all of you.
5 It's just a start. There's still cycle --

6 MS. DAVID: I was wondering, how are
7 you getting the word out? And how are you
8 creating -- see, again, having this without
9 someone to receive it -- what we're seeing in the
10 22 hearings that we did is that doctors don't
11 believe it, one.

12 And secondly, they are not
13 knowledgeable about it.

14 And then, thirdly, they're not
15 going to do it.

16 So those are the three types of
17 doctors that we've encountered.

18 MS. ALTMAN: The reimbursement rates
19 only started January 1, 2006. We've done some
20 media on it. We have done some outreach. So has
21 the State.

22 They've now hired two big
23 companies to do outreach on both of the issues.
24 One, McKess and one, Automated Help. Part of

1 their subcontracts includes huge outreach
2 providers and subcontracts to the provider groups,
3 including the Illinois Chapter of American Academy
4 of Pediatrics to get the word out.

5 Believing it, doctors believing
6 it. I think the State has to build back trust
7 with physicians in terms of really paying in the
8 guarantee 30-day payment cycle for pediatricians.
9 They're not going to believe it until that
10 happens.

11 And as for other providers,
12 unless that cycle changes, I don't think -- and
13 the penalty actually changes --

14 MR. LERNER: Let me step back,
15 though. I think this is a great example and I
16 want to pick back up on Craig's point.

17 We're all aware that the special
18 populations that we have negotiated, or special
19 providers with special groups have negotiated
20 special payment arrangements. We call those,
21 "Pass Groups."

22 If we're going to go from where
23 we are today with all this patchwork quilt of
24 crazy arrangements that exist -- and we even saw

1 some of those in the Medicaid programs. And Ann
2 Marie talked about this. To some type of uniform
3 policy. Somebody's ox is going to get gored.
4 There's just no two ways about it.

5 So again, I suggest from a task
6 force point of view, we need to be real careful
7 about this, because the children's world have been
8 getting -- and they've done a great job of
9 lobbying for special dispensation at the federal
10 and state level. I'm not aware if that exists for
11 people who care for people with disabilities or
12 the elderly or the HIV population or any of the
13 other special populations we're talking about.

14 So, you know, as we go down this
15 road, let's think about this incrementally as
16 we're going to change it.

17 The effects on social policy on
18 what we're trying to accomplish has also got to be
19 factored in.

20 Don't miss a point that they
21 mentioned. Seven out of ten people with
22 disabilities who can and want to work cannot find
23 jobs. Cannot find jobs. And once they find a
24 job, it's likely that they lose some of the State

1 support benefits that allow them to maintain that
2 job.

3 So we've got the incentives all
4 in the wrong place here. And these are the kinds
5 of things that I expect we're going to debate and
6 discuss at the July and August meeting. Other
7 questions? Thank you very much.

8 We are now going to shift gears,
9 as David suggested at the beginning, to special
10 population and prevention presentations. And the
11 first presentation is from Dr. Jarvette Orgain.

12 DR. ORGAIN: That's correct. Thank
13 you.

14 Hi, I'm representing the State
15 Board of Health today, but I wear a number of
16 hats.

17 One additionally is the National
18 Medical Association and the Local Society of Cook
19 County Physicians Association, as well as the
20 Illinois Academy of Family Physicians' which is
21 very concerned about this issue in regards to the
22 Health and Justice Act.

23 what I wanted to do is just
24 introduce you again -- reintroduce you to the

1 State Board of Health in regards to our role in
2 this arena.

3 Annually we're required to give a
4 report through the Director of the Illinois
5 Department of Public Health to the governor in
6 regards to the public health status of the
7 citizens of Illinois, as well as public health
8 policy.

9 Coincident to the passage of the
10 law that instituted the Health and Justice Act,
11 the State Health Improvement Planning, House Bill
12 4612 was passed and also became law in August of
13 2004.

14 And what we're charged to do in
15 regards to the state health improvement planning
16 process, taking a look at the health needs of
17 Illinois, as well as health improvement planning.
18 Along with the time frame you're working with, it
19 was due to be submitted to the governor in 2006.

20 we're still working with that
21 time frame, if we can. The first, again. The
22 second would be January 2009, and then every four
23 years thereafter, for a presentation through the
24 Department of Public Health and to the general

1 assembly, governmental general assembly.

2 The plan is designed to be
3 produced by a multidisciplinary team of public,
4 private and volunteer stakeholders.

5 It must include, according to the
6 legislation, priorities and strategies for health
7 status and health system improvement with a focus
8 on prevention, as well as specific goals to reduce
9 racial, ethnic, geographic, age, gender, socio
10 economic health disparities.

11 If you take a look at the last
12 page of your handout, we began the task force --
13 the planning team that was created and appointed
14 by the Director of Public Health, Dr. Whitaker,
15 began its process in October 2005. And you can
16 see the flow chart of where we are today.

17 where we are today in terms of
18 June 2006 is the draft is being completed. This
19 month we've had all of our meetings. The draft is
20 being completed this month. The last meeting was
21 Friday.

22 And we are scheduled to hold --
23 the State Board of Health is scheduled to hold
24 three public hearings. August 4th in Mt. Vernon,

1 August 8th in Bloomington, August 9th here in
2 Chicago.

3 The draft plan and throughout the
4 process, the team -- the draft plan addresses six
5 strategic issues. Priority health conditions,
6 which were determined from using National Health
7 Priority. The Illinois Project for -- I-Plan for
8 local health need assessment, and other
9 information to set national standards.

10 Obesity, physical activity,
11 substance abuse and violence were selected based
12 upon that assessment of the health priority from
13 local health departments, and the I-Plan and
14 national health Objectives, such as Healthy People
15 2010.

16 Access to care, health
17 disparities, work force data, information
18 technology, measure, manage, improve the public
19 health system on the strategic issues that the
20 State Health Improvement Plan is looking at.

21 In regards to long-term outcome,
22 the strategic planning process from the SHIP team
23 included a number of input, initial, intermediate
24 and desired long-term outcomes, those being, as

1 you can see here, what's in your handout. I won't
2 read them to you.

3 But particularly, in regards to
4 the healthcare and public health system, a system
5 -- and this is what you're discussing here today.
6 System change, a plan for providing healthcare to
7 all of Illinois citizens.

8 Then one that is responsive to
9 the culture, linguistics and other population
10 needs. Integrate prevention and care. And
11 utmost, universally available and affordable.

12 And a health system that is
13 actively engaged in addressing health disparity
14 and the social determinates that affects health
15 outcome.

16 The additional long-term outcomes
17 include culturally and linguistically competent
18 work force, which you are not necessarily
19 addressing, but what we, as a State Board of
20 Health once you develop your plan, we will be
21 looking at these issues and how they interface.

22 A well-understood and utilized
23 linked data system. And a system to monitor the
24 State Health Improvement Plan goals and objectives

1 and implement improvement.

2 what you're doing here today and
3 what we have to do in terms of the State Health
4 Improvement Planning process is ensure that
5 whatever the health system changes will be, will
6 improve the health response, legitimate
7 expectations of Illinois citizens and the fairness
8 in terms of contribution, meaning federal, state
9 and personal responsibility in regards to
10 healthcare.

11 I would recommend that as you
12 continue your process, that this is taken from the
13 World Health Organization 2000 annual report that
14 talks about needed health system changes. How we
15 get to universally accessible and affordable
16 healthcare.

17 And so, I'm not sure where we fit
18 in terms of State Board of Health, whether we're a
19 special population in regards to the presentation,
20 but what we need to do is invite the member of the
21 Adequate Health Care Task Force to our public
22 hearings. Again, on August 4th, 8th and 9th.

23 And to recap how we see our role
24 in regards to this Task Force and the State Health

1 Improvement Planning Team, we are not developing a
2 plan. You are. And in regards to the State
3 health improvement planning, we will be assessing
4 the plan that you develop.

5 And so, in regards to what you
6 do, as we look at and as we hold our public
7 hearings, and as citizens of Illinois, as well as
8 you advise us in terms of the needs assessment and
9 how we improve the health of the citizens of
10 Illinois, then we will take into consideration
11 what you have developed as well.

12 You have the time schedule for
13 which the plan is going to roll out and so do we.
14 And the information that we provide will be on the
15 web site for you to look at in regards to the
16 State health planning improvement process.

17 Our information is designed to be
18 completed by September of 2006. And so the Health
19 Care Justice Act is designed to produce a plan
20 that ensures access. And we at the State Board of
21 Health and at that level, will be evaluating that
22 plan as well. So, any questions?

23 MR. LERNER: Thank you very much.
24 Questions for Dr. Orgain?

1 DR. ORGAIN: So from a perspective of
2 inner faith, we hope that -- and we have members
3 of this task force that report to us at the State
4 Board of Health.

5 Our public hearings will be held.
6 The State Board of Health will meet again in
7 September and December. And we will need the
8 information from you that will allow us to take a
9 look at one of the plans we're looking at.

10 what we consider to be very
11 important are the costs of the plan. And as you
12 move forward and evaluate the ones that you're
13 considering, those that have failed across the
14 nation have been those that have skyrocketed in
15 terms of costs, attempting to provide healthcare
16 to all the citizens, yet failing in regards to
17 cost.

18 So we would encourage you to look
19 diligently at that. Thank you.

20 MR. LERNER: Doctor, there was an
21 article in the wall Street Journal about a week or
22 two ago about a pilot program at Mt. Sinai in York
23 -- I think it was Sinai in New York, that was
24 looking at really re-focusing chronic conditions

1 of low income Medicaid beneficiaries away from the
2 acute care to prevention, with incentives built in
3 by the Medicaid payment program. So that the
4 hospital would lose money initially, but gain it
5 later, and they would really focus on prevention.
6 Have you seen that article or --

7 DR. ORGAIN: The board has not looked
8 at that article per se in looking at -- looking at
9 your work. We have not done that.

10 MR. LERNER: Okay. This was a great
11 example.

12 DR. ORGAIN: As a family physician, we
13 certainly are aware of that.

14 MR. LERNER: It was a great article
15 about a week ago. I just would recommend it
16 because I really think it's another one of the
17 great examples.

18 we've talked about examples like
19 this throughout our whole deliberations of what we
20 could learn from special pilots in other areas.
21 Goes right in line with what you're talking about.
22 Questions or comments? Thank you very much.

23 Last on the agenda before lunch
24 is Joe Antolin and Joe Harrington, who are

1 representing Racial and Ethnic Health Disparities
2 Action Council.

3 MR. HARRINGTON: Good afternoon and
4 thank you. I'm Joe Harrington, not Joe Antolin.
5 I'll be doing the presentation. I'll be doing the
6 presentation with respect to my role -- two roles.

7 One, I'm the Chair of the
8 advisory panel of the Illinois Department of
9 Public Health. I'm also the Co-chair of the
10 Racial and Ethnic Health Disparities Action
11 Council.

12 what I'm going to attempt to do,
13 and I'm going to be try to be brief with respect
14 for the Task Force time, and also allow as much
15 time as possible for questions and interactions.

16 I'm going to give an overview of
17 the uninsured in Illinois, review problems with
18 racial and ethnic health disparities. Suggest
19 ways to address these disparities through the
20 Health Care Task Force Plan. And there's four key
21 areas that I will get into. And we'll talk about
22 the take-up of programs, low-quality healthcare
23 and limited information.

24 As you can see by this slide,

1 there's quite a disparity among uninsured or with
2 uninsured, particularly in the metro Chicago area
3 and the Chicago area specific to minorities.

4 Actually, 90 percent of the
5 Hispanic population in the State of Illinois lives
6 in Cook County. 56 percent of all minorities live
7 in Cook County, and 49 percent of minorities
8 throughout the State live in the inner city.

9 while we're looking at the issue
10 of access to healthcare, it's important to
11 remember that if we're talking about healthcare,
12 it's really the social determinates of health that
13 create and breed an environment in which poor
14 healthcare can and does thrive. So while we're
15 talking about access, it is a major factor, but
16 not the only factor in what we're talking about.

17 what we're going to do is address
18 six plans of the Adequate Health Care Task Force,
19 attempting to bridge them with the REHDAC focus on
20 social determinates, the impact upon health
21 disparities. Again, "REHDAC" stands for Racial,
22 Ethnic, Health Disparities Action Council.

23 A take-up refers to those that
24 have access or are eligible for a program, but

1 actually don't sign up for the program.

2 Some of the explanations we can
3 see here might be transaction costs,
4 misinformation about details in the program. Need
5 for continued recertification. And a lot of
6 times, minorities are not offered employment-based
7 health insurance at the same rate as whites. So
8 we have some specific suggestions.

9 Current plans could be modified
10 to limit take-up problems for the Adequate Health
11 Care Task Force programs. Some of these might
12 eliminate some stringent access limits currently
13 in place.

14 Another might be to adopt
15 presumptive response eligibility and provide
16 service until proven ineligible. Eliminate some
17 of the long waiting periods for people getting
18 insurance.

19 You can use simplified questions,
20 eligibility questions to make sure people become
21 eligible.

22 And you can have a 12-month or
23 two-year continuous eligibility.

24 Again, we're looking to get more

1 people to actually take advantage of those plans
2 that are, in fact, available, because this may go
3 a long way to do that.

4 Another problem to look at is a
5 problem with quality care. And the limited
6 diversity among the community health work force
7 has negative implications for access, quality and
8 equity.

9 The Institute of Medicine has
10 found that racial concordance of patients and
11 providers is associated with greater participation
12 in the care process, higher satisfaction and
13 greater adherence to treatment.

14 There was a study done that
15 actually showed that African-Americans and
16 Hispanics had a greater perceived notion of the
17 fact that they will get poor or lesser care just
18 based upon race alone, which sort of substantiates
19 this.

20 So some of the recommendations we
21 would make are to establish standards for
22 culture/linguistic competency. To make
23 cultural/linguistic competency part of quality
24 measures. A required training for all healthcare

1 providers serving minority populations to assure
2 and enforce these standards.

3 Also to increase incentives --
4 create incentives for doing the training, because
5 without incentives to do the training, it's highly
6 unlikely that anyone will take advantage of the
7 training.

8 It's an important thing, we
9 think, but there has to be some built-in
10 incentives to get people to actually take
11 advantage of the training.

12 Encourage more minority providers
13 to participate in healthcare plans to serve a
14 higher proportion of minorities. A lot of the
15 providers, particularly the minority providers in
16 the minority communities, have somewhat higher
17 costs in terms of actually providing the care.

18 And that should be looked at in
19 terms of any plan that's developed to compensate
20 them for their higher costs so they can, in fact,
21 actually earn a living by serving the minority
22 community.

23 And last, create enforcement
24 authority for these standards.

1 Another recommendation that we'd
2 like to make is around the issue of low quality of
3 care to minorities. And that could -- by
4 increasing reimbursement, subsidy rates to
5 healthcare providers who demonstrate
6 cultural/linguistic competency and managed-care
7 plans and new insurance pools require new plans
8 and/or pools to establish prevention and
9 interventions targeted at minorities.

10 For example, a plan that has a
11 great deal of African-Americans requires
12 prevention focused on diseases affecting
13 African-Americans. And there's very few that
14 don't, but either provide -- make sure that they
15 require preventive focus on diseases like heart
16 disease. Specifically high blood pressure,
17 diabetes, things like that that adversely affect
18 African-Americans.

19 The problem of limited data on
20 minority health outcomes. It is difficult to
21 research the problem of health disparities in
22 minority communities because very little data is
23 collected by racial and ethnic categories.
24 without this data, the health problem in the

1 communities of color are mass, making it harder to
2 prevent and eliminate health disparities.

3 A couple of good examples of
4 that. The top three killers in this country for
5 most people are heart disease, cancer and stroke;
6 however, for Asians and Pacific Islanders, the
7 number one cause of death is actually cancer. So
8 there is a dramatic difference when you look at
9 data on the basis of race and ethnicity.

10 Another telling statistic -- and
11 I heard this probably about five years in my role
12 with the advisory panel on minority health, there
13 was a study that was done looking at different
14 issues involving health, specifically in the City
15 of Chicago.

16 And when you looked at the Asian
17 Pacific Islander community in the City of Chicago,
18 among that community there was low incidence of
19 suicide; however, if you broke that down based
20 upon ethnic group, the Lao Mung population, who
21 primarily is on the north side of the City of
22 Chicago, had a very high incidence of suicide.

23 The only ways to tease out a
24 problem like that is not only look at the data on

1 the basis of race, but look at the data on the
2 basis of ethnicity. So there are ways to do that.

3 The census allows people to
4 report that; however, there's some inconsistent
5 reporting of race and ethnicity throughout the
6 State.

7 So our recommendations would be
8 to develop data collection procedures and measure
9 health problems in different minority populations.
10 Change state data collection procedures used in
11 OMB15 at a minimum. And that clearly outlines the
12 current standard on a federal level for collection
13 of data on race and ethnicity.

14 Require all current and new
15 health insurance, managed-care or publicly funded
16 programs to collect uniform, race and ethnicity in
17 the primary language of patients.

18 And again, OMB15 is used by the
19 federal government. It's used in terms of the
20 census. It should be adopted by all healthcare
21 providers to ensure consistency, so when we're
22 making comparisons, we're really not comparing
23 apples to oranges.

24 So our conclusion is to have a

1 significant opportunity to include small
2 provisions to help decrease and really impact on
3 this issue of health disparity for racial and
4 ethnic minorities.

5 We respectfully suggest that the
6 Task Force incorporate these and some of the other
7 statistics, I guess that will be made, into their
8 final plan. I'd be more than happy to answer any
9 questions.

10 MR. LERNER: Questions for Joe?

11 MS. DAVID: One of the things that --
12 there's been a lot of federal talk about health
13 providers having to do the citizenship testing of
14 immigrants. And I didn't necessarily see that in
15 the recommendations, but I think that that's one
16 that -- I think that, at least we should probably
17 put.

18 MR. HARRINGTON: I think that's one
19 that the counsel would support. I see no problem
20 with that.

21 MR. LERNER: Niva?

22 DR. LUBIN-JOHNSON: Thank you for the
23 presentation, Joe.

24 And he's being little a modest.

1 He also has another title he acquired recently. I
2 believe it's Assistant Commissioner of Health and
3 Retirement?

4 MR. HARRINGTON: I assumed the
5 position of Assistant Commissioner for the City of
6 Chicago, Department of Public Health, yes. But
7 I'm not here in that role.

8 DR. LUBIN-JOHNSON: Right. My
9 question is in terms of what the council is
10 looking at, have you all thought about looking or
11 are you looking at the paper performance
12 management that are becoming increasingly
13 prevalent for providers?

14 I think it's a detriment to those
15 of us who serve, you know, those persons of color
16 because we start out behind -- our patients start
17 out behind the eight-ball already.

18 So for us to try to get them up
19 to where they should be in terms of paper
20 performance and practice guidelines, is a bit more
21 of a hurdle to do.

22 MR. HARRINGTON: This is something
23 that the council hasn't looked at specifically,
24 but it's something that I know we would support.

1 There are -- the technology is
2 available to make the burden of paperwork a lot
3 lower on all providers and could do that also for
4 minority providers as well. So that's something
5 that we would, in fact, support.

6 what I would make available to
7 people if they are interested is -- actually, our
8 recommendations come out of a report that our
9 council prepared that was released in December of
10 2004. Copies of that report are available. I
11 don't have the web site, but what we are trying to
12 do is link our recommendations specifically to the
13 recommendations coming out of our report.

14 DR. LUBIN-JOHNSON: Are you all going
15 to do another report sometime in the future?

16 MR. HARRINGTON: It's a possibility.
17 Some of the things that we actually -- the actual
18 strategies that we developed are still being
19 looked at, but until we do a complete and thorough
20 job of what we already said we'd do, it's unlikely
21 we would do another report anytime in the near
22 future.

23 MR. LERNER: Anymore questions for
24 Joe? Thank you very much.

1 Before we adjourn for lunch, I
2 need every voting member for one moment.

3 We now have a quorum. Could I
4 entertain a motion to approve the minutes of April
5 21st and May 9th?

6 MR. CARVALHO: So moved.

7 DR. LUBIN-JOHNSON: Second.

8 MR. LERNER: Any additions or
9 corrections? All in favor please say aye?

10 (All say aye)

11 MR. LERNER: Opposed? Nay. Any
12 abstentions?

13 The minutes are approved as
14 distributed. It is now 12:25. We actually are
15 ahead of time. I want to thank all the presenters
16 this morning. You did a great job. We really
17 appreciate it. We'll be back in session at 1:00
18 o'clock.

19 (Whereupon a recess
20 was had)

21
22
23
24

1 MR. LERNER: I'd like to call
2 together the afternoon session. And I'd like to
3 turn it over to Ralph who will introduce the
4 session participants. And he'll be the timekeeper
5 for the next period of time.

6 MR. SCHUBERT: Well, a couple of
7 introductory things. First of all, I had the
8 opportunity a couple of months ago to talk to you
9 about all the Maternal Child Health Programs
10 within the Department of Human Services, but that
11 didn't tell by half the story of the wide array of
12 things the Department of Human Services does, and
13 the other special-needs populations that it
14 serves. So that's why I put this panel together
15 today to talk a little more about some of our
16 special population and their needs and interests
17 when it comes to health insurance.

18 The space next to me is for Rob
19 Kilbury, our Director of the Division of
20 Rehabilitation Services. We heard from Rob's
21 office about 20 minutes ago and he's tied up in
22 something. And Rob will be here.

23 And next to Rob is Connie Sims
24 from our Division of Developmental Disabilities.

1 Next to Connie is Lillian Pickup from our Division
2 of Alcoholism and Substance Abuse. And next to
3 Lillian is Mike Pelletier from our Division of
4 Mental Health.

5 And next to Mike is Gerri Clark,
6 who is not from the Department of Human Services,
7 even though we feel like she's family.

8 Gerri is with the University of
9 Illinois at Chicago, Division of Specialized Care
10 for Children, and as I mentioned a couple of
11 months ago when I presented Every State Maternal
12 and Child Health Program, devotes about a third of
13 its resources to children with special healthcare
14 needs. Illinois is one of three states in the
15 country where that program is not part of the same
16 agency that gets the MCH block grant.

17 So in order to sort of fully
18 describe, and better that I can do, the needs of
19 children with special care needs, I asked Gerri to
20 come join the panel today.

21 And so I think I'll turn it over
22 to Connie and I'll go over there and make hand
23 signs at about five minutes.

24 MR. LERNER: On behalf of the Task

1 Force, I want to thank all of you for taking the
2 time to be with us here today.

3 You're actually at a very
4 critical juncture in our deliberations, because
5 you're the last presentations before we really get
6 into delving into the models and the criteria. We
7 really do appreciate your attendance here today.

8 MS. SIMS: This is Rob Kilbury. We
9 decided I would start first since you weren't
10 here, but maybe you can go next.

11 MR. LERNER: Let me also remind you
12 that we have a court reporter, so everything
13 that's said is on a transcript. It's the Open
14 Meetings Act, so we'd ask you to speak slowly and
15 articulately so that she can get it all down.

16 MS. SIMS: All right. So I will get
17 started. My name is Connie Sims and I'm here for
18 Jerry Johnson, who is the Director of the Division
19 of Developmental Disabilities. Can everybody hear
20 me? Is it okay if we just remain seated and talk
21 from here?

22 I work in the bureau of Medicaid
23 Administration and Program Development in the
24 Division of Developmental Disabilities. I've

1 worked in the field of Developmental Disabilities
2 for about 26 years, and 23 of those years have
3 been with the State of Illinois.

4 I have a background -- my first
5 job in state government was with the Bureau of the
6 Budget, which is now called, "the Governor's
7 Office of Management and Budget." And I worked on
8 a long-term care budget for the Department of
9 Public Aid which is now called Health Care and
10 Family Services, so I really feel like I've worked
11 in Medicaid programs for my entire State career.

12 The main thing that I want to
13 talk about today is -- I want to talk a little bit
14 about how people with developmental disabilities
15 access basic healthcare in Illinois, but I also
16 want to tell you about the home and
17 community-based waiver program that we operate in
18 the Division of Developmental Disabilities.

19 It is kind of our flagship
20 program, and something we want to make sure
21 everybody has some information about, so I'll come
22 back to that in just a few minutes.

23 I wanted to give you an overview
24 of the entire DD service system. Currently we

1 have a budget of about \$1.3 billion. of that \$1.3
2 billion, about 300 million is spent to operate
3 nine, what we call state-operated developmental
4 centers.

5 And these are located around the
6 State. They are considered long-term care
7 facilities. We get Medicaid matching funds. They
8 are certified as intermediate care facilities for
9 persons with mental retardation by the federal
10 government.

11 So that is one piece of our DD
12 service system. The developmental centers. And
13 those are typically referred to as institutions.
14 They are large congregate settings. Many of them
15 have large campuses.

16 You may be familiar with some of
17 the developmental centers, such as Kiley Center in
18 Waukegan. And we operate Howe Developmental
19 Center in Tinley Park and a number of other
20 centers around the State.

21 The other part of our division is
22 what we refer to loosely as community services.
23 And that makes up the lion's share of the budget,
24 which is about \$1 billion. of the billion

1 dollars, about 400 million of that is spent for
2 private intermediate care facilities for persons
3 with developmental disabilities, so these are also
4 Medicaid-funded settings. Long-term care
5 settings. And they are considered congregate
6 settings for persons long-term care settings.

7 So we have about 2700 individuals
8 currently living in our state-operated
9 developmental centers. And then we have another,
10 about 6800, almost 7,000 people living in the
11 private long-term care setting. So we have just
12 under about 10,000 people that are living in what
13 would be considered institutional settings for
14 persons with developmental disabilities.

15 Then we have -- you know, the
16 other biggest piece of our budget is our home and
17 community-based waiver. And that program is about
18 a \$400 million program at this point in time, so
19 that we are spending about the same amount of
20 money on people who live still with their family
21 in a private family home and are getting support
22 services in the community. We're spending about
23 the same amount of money on those individuals as
24 we are the people who reside in the private

1 intermediate care facilities.

2 The final piece of our budget is
3 about \$200 million, and that's a combination of
4 children services, which are not currently
5 reimbursed by the Medicaid program, and some other
6 grants that we still provide to community agencies
7 to provide a variety of programs. So that's kind
8 of an overview of the entire DD budget and the
9 major pieces that we see.

10 I wanted to talk about the waiver
11 program. As you probably know, there are seven
12 home and community-based waivers in Illinois, so
13 the DD waiver for adults with developmental
14 disabilities is one of seven waivers that are --
15 we have authority to operate here in Illinois.

16 To qualify for the DD waiver, of
17 course, you have to have a developmental
18 disability. You have to be an adult. You have to
19 be eligible for Medicaid benefits, and you have to
20 need the level of care that is provided in an
21 intermediate care facility, so you have to need
22 the kind of care that could result in you being
23 institutionalized. And the waiver services are an
24 alternative to those long-term care facility-based

1 services.

2 And we're currently serving over
3 12,000 adults in our home and community-based
4 program. And it has been growing. It started in
5 1991, and it continues to grow. It is the growth
6 part of the DD budget right now.

7 Any new initiatives that we are
8 lucky to be able to sponsor are all things that
9 qualify for federal Medicaid matching funds.
10 Because certainly, the legislature and the
11 governor's office realizes that if we can sponsor
12 programs that can bring 50 percent of the cost
13 back to the State of Illinois, that that's a much
14 better deal for state taxpayers to only have to
15 pay approximately half of the cost of services.
16 And so that's why the focus has been so much on
17 the home and community-based waiver program.

18 I'd also like to mention that we
19 are currently writing a new waiver. A new home
20 and community-based waiver. And that is for
21 children with developmental disabilities. And
22 it's also going to specifically include children
23 with autism and autism spectrum disorders.

24 We hope to get the application

1 together by the fall veto session. And that's a
2 very exciting opportunity to be able to write a
3 new waiver and design services for children. So
4 we are in the process of doing that right now.
5 And we're under quite a bit of -- we've got quite
6 a deadline to meet to be able to get it all in
7 place.

8 we have an ad hoc committee of
9 people that are advising us on the new children's
10 waiver, so we're getting input from our partners
11 in the State to help design this new package of
12 services.

13 I also wanted to tell you a
14 little bit today -- we have a new dedicated fund
15 that was started by the legislature a couple of
16 years ago. And it's another really positive thing
17 that is happening in the DD service system.

18 There's a formula, and a
19 percentage of the growth in federal matching funds
20 that we're able to earn back to the State of
21 Illinois, is being deposited in this dedicated
22 fund which will then be available to help expand
23 and improve community services for individuals
24 with developmental disabilities.

1 So there's a real incentive for
2 all of our partners to work together to try and
3 increase the federal matching funds coming back to
4 the State so that we can expand and improve the
5 service system.

6 This past year, the treasurer
7 deposited \$2.8 million into the dedicated fund.
8 This coming year, we expect the deposit to be at
9 least 4.5 million, so that we are increasing the
10 federal matching funds and we are being able to
11 deposit money into this new dedicated fund. And
12 this is a very new thing for us and we're very
13 excited about that possibility.

14 Before I talk about basic
15 healthcare, I wanted to let you know about our
16 statewide advisory council. We have a statewide
17 advisory council that meets quarterly. We meet in
18 Springfield. And the council is made up of
19 one-third consumers, one-third family members and
20 one-third providers. So that we feel like there's
21 a real balance on the advisory council.

22 And the way the council works is
23 that DHS is now divided into five regions. There
24 are three representatives that are elected from

1 each of the regions. There's a consumer, a family
2 member and provider elected by each of the
3 regional advisory councils that feed into the
4 statewide council, so that is how the council is
5 organized; however, in the metro area, we actually
6 have four regional advisory councils, so there are
7 a total of eight local advisory councils, for a
8 total of 24 members on the statewide council. So
9 that's how our council is organized. Our next
10 meeting, I believe, is July 13 in Springfield.

11 The last thing I want to talk
12 about before I delve into healthcare, and then I'd
13 like to take questions from any of you, because I
14 think it's -- you know, probably the best way to
15 spend our time is to tell you about things that
16 you're interested in knowing about the DD service
17 system.

18 But I wanted to feature a new
19 database that was started about a year and a half
20 ago which is called PUNS. That's the acronym that
21 we use. PUNS. Has anybody in this room heard of
22 PUNS? Jerry has, Michelle has. That's good. I'm
23 glad people in state government, at least.

24 PUNS stands for the

1 Prioritization of Unmet Needs for Services. And
2 it is a new database that was started. And we
3 contract with 18 independent service coordination
4 agencies around the State. And their staff are
5 doing interviews with individuals and their
6 families who are seeking services from the State
7 for an individual with a developmental disability.

8 So right now, we have over 10,000
9 people enrolled in the PUNS database as people
10 seeking services. And those people are
11 categorized into three different categories.
12 Emergency needs, critical needs, which means
13 within one year. And then planning needs, which
14 is within five years. So that we're gathering
15 information for planning purposes about the people
16 that are seeking services in Illinois.

17 I don't have much time left on
18 the healthcare front. I wanted to let you know
19 consistently we hear from members of our statewide
20 advisory council that they think the State
21 medicaid plan, which is the primary provider of
22 basic healthcare for individuals we serve, should
23 cover preventive dental services for adults.
24 Annual checkups, and teeth cleaning are services

1 that are not covered now for adults under the
2 Medicaid plan, state plan.

3 So that is something that we have
4 heard for the last 20 years, about a need for
5 basic healthcare that I wanted to bring to you
6 today given your role here.

7 So that's about all the time I
8 have. If you -- just maybe one question if anyone
9 has a question? Yes.

10 MS. DAVID: At one of our hearings, a
11 dentist that services population, talked about
12 some mortality related to aspirations. Could you
13 speak on that?

14 MS. SIMS: Aspiration is a problem, a
15 common -- I don't want to say common, but it
16 certainly is an issue for people with Cerebral
17 Palsy. People who have compromised lung capacity
18 and physical ailments.

19 And, you know, I know that we
20 track mortalities in our DD service system and I
21 know aspiration is high on the list of cause of
22 death, but I do not know anything about the
23 connection between aspiration and dental care.

24 MS. DAVID: Well, he had a study and

1 he has been tracking. And you may want to look at
2 that because he's saying that these people have
3 poor access to dental services and as a result,
4 they don't have the proper dentures and care so
5 they can chew their food. And as a result, that's
6 what causes their aspirations.

7 MS. SIMS: Okay. Well, thank you very
8 much.

9 REPRESENTATIVE COULSON: I have a
10 quick question on the definition of a DD client.
11 Do you include autism in that or not?

12 I know you're doing a new waiver
13 on autism, but where do those children fit in in
14 the department?

15 MS. SIMS: Not everyone with a
16 diagnosis of autism would be considered to have a
17 developmental disability; however, many, many do.
18 And the definition is something that the
19 eligibility for the children waiver is something
20 that we're dealing with right now.

21 And we've been very fortunate to
22 be able to hire some private consultants. There's
23 going to be an RP issued, and so we'll be
24 contracting that out and relying on some real

1 experts to help us develop the eligibility
2 criteria for the new children's waiver. And that
3 will address how many children with autism. What
4 other conditions or functional deficits do they
5 have to have in order to qualify for the
6 children's waiver.

7 REPRESENTATIVE COULSON: The reason I
8 ask the question is -- I know that's all
9 happening, but the concern for this task force is
10 making sure that we don't define a group and then
11 have a whole missing group that doesn't get
12 healthcare for our purposes in the Adequate Health
13 Care.

14 MR. KILBURY: Maybe we should give
15 everybody healthcare. How about that?

16 REPRESENTATIVE COULSON: Well, in
17 government, we tend to define and categorize and
18 then all of a sudden, we have this group left out,
19 and I just wanted to make sure.

20 MS. SIMS: Thank you.

21 MR. SCHUBERT: Thank you, Connie.

22 And Rob's got an appointment
23 coming up in a few minutes, so I want to turn the
24 floor over to Rob and shuffle the order here.

1 MR. KILBURY: I'm Rob Kilbury. I'm
2 with the Deputy Director of the Division of Rehab
3 Services.

4 I have a few statistics that I
5 brought with me that the Harris poll and census
6 bureau had talked about in terms of people with
7 disabilities in healthcare. But I thought I would
8 talk a little bit about the programs that we have
9 that are healthcare related at the Division of
10 Rehab Services.

11 I guess our flagship program, of
12 course, is our \$400 million home services program,
13 which is also a Medicaid waiver, meaning that
14 everybody that's Medicaid eligible on a day-by-day
15 basis, the State gets 50 percent of money back
16 from the feds and federal financial participation.

17 About 80 percent of the 30,000
18 people in our general waiver currently are
19 Medicaid eligible. So if it's a \$400 million
20 program, we get in the neighborhood of -- I don't
21 know, 160 or so million back in FFP.

22 That, of course, speaks loudly to
23 people like Beth Coulson, who is on our Human
24 Services Appropriations Committee.

1 And what it does is allows people
2 with disabilities to live in the community by
3 living in a nursing home. By definition, these
4 folks are at risk of nursing home stay.

5 And so the thousand or so dollars
6 that we spend in an average case cost in the home
7 services program, is compared to the 3 or \$4,000
8 that we'd spend on that same individual if they
9 were living in a nursing home. So their quality
10 of life is much enhanced, and it's also a
11 tremendous cost savings to the State.

12 The general waiver, as I said
13 before, has about 30,000 individuals in it. We
14 also have a AIDS waiver for people who are HIV
15 positive and qualify by their score on the
16 determination and need instrument that makes one
17 eligible either for a nursing home or for home
18 care in the State of Illinois.

19 And we also have a traumatic
20 brain injury waiver. That's the newest of the
21 three waivers that the division operates.

22 You know, in terms of healthcare,
23 I remember going to Washington years ago when the
24 federal healthcare debate was hot. And people

1 were gathering outside the Senate Finance
2 Committee room and urging people like John Groe
3 and people like Dale Bumpers and other people that
4 were less supportive of healthcare than that, that
5 healthcare really had to work for people with
6 disabilities if it was going to work at all.

7 In other words, the litmus test for
8 healthcare reform in the day should be whether
9 it's going to work for people with disabilities.

10 You know, even somebody like me
11 that's got a middle-class lifestyle, who has a job
12 that they go to everyday. Who, you know, does
13 okay in terms of many of the socioeconomic
14 demographics and so forth.

15 The first thing that my wife, my
16 daughter and I think about when we look at
17 employment is, what's the benefits package going
18 to look like.

19 I've got a condition called
20 syringomyelia, which has had -- has required major
21 surgery twice. And, you know, we're really -- my
22 family is without a good healthcare package. My
23 family is like this far from poverty at any given
24 minute because of the costs associated with that

1 particular surgery. And there's a lot of people
2 that are in that position that have disabilities.

3 Harris, the National Organization
4 of Disability, did a survey in 2004 which
5 indicates that people with disabilities are more
6 than twice as likely to report that they did not
7 receive needed healthcare on at least one occasion
8 within the last year than people who do not have
9 disabilities.

10 The statistics were 18 percent
11 for people with disabilities and 7 percent for
12 people who did not have disabilities.

13 Similarly, people with
14 disabilities reported significantly greater
15 problems finding a doctor who understands their
16 healthcare needs compared to people who don't have
17 disabilities. The statistics there were 26
18 percent for people with and 10 percent for people
19 without disabilities.

20 People with disabilities report
21 being worried about losing their health insurance
22 coverage more than those that don't have
23 disabilities by a statistical percentage of 44 to
24 31.

1 And when you look at people by
2 age, in the age range of 25 to 64, basically the
3 employment years for most people, 15.9 percent of
4 those individuals in that age range who didn't
5 have a disability lacked health insurance
6 coverage. 17.2 percent who had a disability that
7 was not characterized as being severe lacked
8 health insurance. And 18.7 percent of those with
9 severe disabilities lacked health insurance.

10 So obviously, there's a
11 correlation between age and disability. There's a
12 correlation between not having health insurance
13 and having a severe disability.

14 And I guess the only thing I
15 could say in terms of urging this group of people
16 -- and I've loved working with Jim Duffett over
17 the years and I've loved working with Quentin
18 Young over the years.

19 The only thing I could urge is
20 that if it's going to work with people in general,
21 it has to work for those with the most significant
22 disability.

23 So I'm all for a single-payer
24 universal system, what we talked about, affiliated

1 with the campaign for better healthcare for years
2 and years. I know it's what Quentin has advocated
3 for years and years.

4 It would be great to see Illinois
5 do something like the State of -- what was it --
6 Massachusetts just did. And urge all of the
7 employers in the State to cover health insurance
8 for their employees.

9 MR. SCHUBERT: Questions for Rob?

10 MR. MURPHY: Rob, Mike Murphy. Was
11 that a personal view or administration view about
12 universal healthcare?

13 MR. KILBURY: No, I don't purport to
14 speak for anybody but me. Thank you.

15 MS. DAVID: I wanted to ask, in our
16 hearings, Rob, there was several people who have
17 used your services. You're DORS, right?

18 MR. KILBURY: Yes.

19 MS. DAVID: They speak of gaps in
20 services around physical therapy in the home and
21 the long wait times of paying providers. Can you
22 speak to -- if you know about this issue?

23 MR. KILBURY: Well, our personal --
24 90 percent of our program is the personal

1 assistance part of it. And the RPAs, as we call
2 them, are paid every other week as long as their
3 calendars are submitted on time.

4 And so we've got -- for the
5 30,000 customers that we have out there, we have a
6 similar number of PAs, maybe even a few more
7 because some customers have more than one personal
8 assistant. And as long as they get their
9 calendars in on time to our offices, they get
10 paid.

11 MS. DAVID: This is physical therapy.

12 MR. KILBURY: Well, that's a very
13 small component of the home services program.

14 MS. DAVID: But that's the area in
15 which we -- people came out and testified that
16 they are having severe problems.

17 Like Friday up in McHenry County,
18 crying. I mean, people crying. Daughters having
19 muscular dystrophy and they haven't paid the
20 physical therapist. And this is what keeps them
21 breathing without the ventilator.

22 And then the physical therapists
23 haven't been paid. Then it was a whole complex
24 group of core agencies involved in the care, and

1 none of them could talk to each other, you know.

2 So I was just wondering if -- you
3 may not know about it now, but could you look at
4 those small cases, because that's where our
5 complex crises are.

6 MR. KILBURY: I'd be happy to look at
7 any case or on a case-by-case basis. The reality
8 is that our program -- Governor Blagojevich has
9 increased this program tremendously over the
10 years.

11 Our program -- the cost of our
12 program goes up by somewhere in the neighborhood
13 of 10 percent per year, so there aren't a
14 tremendous amount of people out there that are
15 going wanting in terms of home services.

16 There may be gaps for people with
17 very complex disabilities here and there. And I'm
18 not refuting at all what you've said. No program
19 is perfect. But I certainly am happy to look into
20 anything that anybody has and can bring to us that
21 is a hardship on our customer, because that's the
22 only reason we're there as an agency.

23 MR. LERNER: Representative Coulson?

24 REPRESENTATIVE COULSON: Yes. I have

1 a question that actually came to me yesterday at a
2 meeting last night at 10:00 o'clock. I haven't
3 had a chance to look into it. You may be able to
4 answer it, maybe not.

5 As you know and I know, there are
6 disabled people under 65 who are eligible for
7 Medicare coverage. And they're able to get the
8 Medicare coverage, which helps, obviously,
9 everybody because they do get health insurance in
10 that way.

11 The question that I have,
12 apparently, in 22 states they're allowed to get
13 supplemental coverage, but in our states, for some
14 reason, there's no supplemental coverage for those
15 disabled people under 65 who are eligible for
16 Medicare.

17 That's a gap that I didn't -- I
18 didn't catch in these meetings, and someone told
19 me about it yesterday. Do you know anything about
20 it?

21 MR. KILBURY: I think that's a Public
22 Aid question. I'm not sure I can respond to that,
23 Representative.

24 REPRESENTATIVE COULSON: It's not a

1 Public Aid question, because it's not Medicaid.
2 They're Medicare eligible and they're not able to
3 buy their own supplemental insurance.

4 MR. MURPHY: Actually, there was a
5 bill that was introduced about three years ago
6 that would have done that, and it didn't go
7 anywhere.

8 REPRESENTATIVE COULSON: Right. And
9 my question, I guess, is, is that something as an
10 Adequate Health Care Task Force we should be
11 looking at?

12 So most of your clients -- all of
13 your clients actually are Medicaid eligible?

14 MR. KILBURY: Not all, but most. I
15 mean, there's a tremendous correlation between
16 poverty and having a disability. And obviously,
17 the thing that drives being eligible for Medicaid,
18 in addition to having a disability, is the poverty
19 end of it.

20 So, you know, whether we're
21 talking about our home services program and to a
22 lesser degree, even our vocational rehabilitation
23 program.

24 REPRESENTATIVE COULSON: Yeah, but

1 we're here talking about the healthcare access of
2 your clients.

3 MR. KILBURY: And one of the issues
4 related to all that is that people are -- have
5 Medicare or Medicaid, depending on if they are on
6 SSDI or SSI. And they then have to go to work and
7 sometimes they can qualify for an employer's
8 healthcare plan and sometimes they can't. And
9 that's a --

10 REPRESENTATIVE COULSON: These are
11 for people who are not employed, can't get
12 supplemental.

13 MR. KILBURY: Yeah. But I think more
14 people -- a lot more people would be employed if
15 there were healthcare for everyone and it wasn't
16 tied to your employment status. And that's
17 certainly what we've been advocating for for years
18 and in any number of context. That's why we were
19 excited about healthcare reform.

20 MR. LERNER: Conversely, more people
21 will get work who are able to work through the
22 DORS and elsewhere as long as there is
23 employer-sponsored healthcare. The more people to
24 go to work, the more we cover those people as

1 well, right?

2 MR. KILBURY: Absolutely.

3 REPRESENTATIVE COULSON: Illinois is
4 one of -- whatever 22 minus 50 is, one of the few
5 -- there are 22 states that have allowed this kind
6 of coverage to be purchased, and apparently
7 Illinois is not one of them.

8 Again, I was told this by a
9 constituent who has a son who is 44 who is
10 Medicare eligible. And it's a -- I knew about the
11 bill, but I didn't know if -- because you're
12 probably in the same category, Rob, I thought
13 maybe you would know.

14 MR. KILBURY: I plead ignorance.

15 MR. GELDER: Just for clarification,
16 in our program on aging, 53 percent of our clients
17 are Medicaid eligible, so there's a much larger
18 percentage.

19 REPRESENTATIVE COULSON: Right. But
20 you're over 65.

21 MR. GELDER: No, no. Just in terms of
22 percentages.

23 THE COURT: Okay. Thank you, Rob.

24 Lillian Pickup, Division of

1 Alcoholism and Substance Abuse.

2 MS. PICKUP: Hi. I'm representing
3 Theodore Binion Taylor, who is the Director of the
4 Division of Alcoholism and Substance Abuse. I am
5 a registered nurse. Next year will be my 40th
6 year in healthcare, all of which have been spent
7 in addictions and mental health. Ninety percent
8 pure addictions.

9 I consider that I must be kind of
10 stubborn because I represent one of the most
11 discriminated against illnesses and diseases,
12 which we'll talk about a little bit later.

13 You have a handout in your packet
14 here. One of the things that the Illinois
15 legislature wrote a number of years ago when they
16 created DASA when it was the department was to
17 improve the quality of life in Illinois by
18 eliminating the human suffering and economic loss,
19 all by misuse and addiction to alcohol and other
20 drugs.

21 Our budget is approximately
22 \$243 million general revenue. Federal block grant
23 funds, close to \$70 million. Some
24 special-use-funds which are Illinois general

1 revenue and Medicaid.

2 We serve approximately 90,000
3 individuals a year. We're totally privatized and
4 have been privatized since the 1970s, so my office
5 is highly administrative. We keep begging for
6 money, and so forth. Particularly, we do have
7 federal competitive awards which we're pretty good
8 at getting.

9 Some of the services that we
10 represent and we purchase from the Wisconsin
11 border down to Anna, Illinois and from the
12 Mississippi to Indiana, case management, community
13 intervention, early intervention, outpatient,
14 intensive outpatient, which I like to call rehab
15 without a bed. Detoxification, residential rehab,
16 residential aftercare in three different levels.

17 The opioid maintenance, which is
18 an ancillary service. And soon it's going to
19 become medication assisted treatment.

20 There are more medications coming
21 to the treatment level that are assisting in the
22 services in the provision and the recovery from
23 addictions, and so we are moving to include that
24 in our licensure.

1 We are the licensing body for all
2 subacute addiction services in the State of
3 Illinois. We're also the DUI payer and a few
4 other things.

5 We pay for psychiatric
6 evaluations, toxicology. And we also pay for
7 child ancillary services when the parent is in
8 treatment in a limited amount.

9 About 16.4 percent of Illinois
10 residents, age 16 and above, were found in need of
11 addiction -- some level of addiction treatment in
12 2003. This was an Illinois-based study paid for
13 by the Center for Substance Abuse Treatment.
14 Almost every county was represented. That
15 translates to 1,580,000 individuals.

16 This is where I usually say you
17 can pay us now or you can pay us later. We are
18 all paying.

19 17.3 percent are lacking
20 insurance coverage; however, that number is going
21 up. And the other issue is underinsurancce.

22 I make treatment referrals over
23 the Internet. I also make treatment referrals
24 through the phone. All different ways. People

1 are calling.

2 People who have insurance are
3 borrowing, mortgaging their homes, doing anything
4 they can to manage the copays which are
5 discriminatory against substance abuse.

6 You pay more in copays. You have
7 limited services on an annual basis. And you have
8 a limit as to what you can receive in that year
9 and lifetime.

10 The 2003 household survey also
11 had us take a look at those with other disorders.
12 14.2 percent with a substance abuse disorder have
13 a physical disability. 29.2 percent are also --
14 have a DSM3 or 4 diagnosis for mental illness.
15 Ten percent -- this is from the 2003 Illinois
16 social indicators study also done by the division
17 and paid for by the feds.

18 Ten percent of discharges from
19 Illinois general hospitals each year involve
20 diagnoses that are 100 percent attributed to or
21 related to the use of alcohol. Alcohol only.
22 These alcohol-involved hospital discharges have
23 annual costs and charges in excess of \$1 billion.

24 Each year about 40,000 discharges

1 are drug related with costs and charges of about
2 \$300,000. That comes to a total of 1.3 billion.
3 And we're not talking about the other social costs
4 and so forth.

5 National estimates from a new
6 policy panel that just came out this morning is 20
7 percent of national acute Medicaid expenditures
8 pay for alcohol or drug-related medical costs.
9 Health care is paying. It's just not paying
10 necessarily for treatment.

11 The cost of parity have been
12 studied and have been studied over and over and
13 over again. The cost for providing parity to an
14 insurer is .2 percent.

15 But again, when I said
16 discrimination before, I kind of meant
17 discrimination. Are you aware that the Illinois
18 Insurance Code currently allows an insurance
19 company to disallow payment for treatment of an
20 illness or an injury if you are recorded as
21 intoxicated?

22 Illinois is the recipient of a
23 \$22 million screening, brief intervention and
24 referral to treatment grant commonly called SBIRT.

1 That grant is up in the Chicago area at Stroger
2 Hospital and a few other hospitals primarily
3 serving public clients.

4 I don't know that that grant
5 could go into other hospitals because what is
6 occurring and what's commonly called an alcohol
7 exclusion law, there is a federal initiative to
8 remove these state by state. Two states just
9 removed it, Colorado and Connecticut.

10 But the screening and brief
11 intervention in what would be a wonderful
12 opportunity often doesn't occur because that
13 hospital and that physician may not be reimbursed
14 for anything from a minor to a serious injury.

15 The next time you see your
16 neighbor painting the side of the house with his
17 friends and if they stop and have a beer, tell
18 them don't get back on the ladder.

19 The other thing I wanted to make
20 sure people knew is that 70 to 75 percent of all
21 those in need of drug or alcohol treatment are
22 employed. They may or may not be insured, but I
23 can pretty much assure you that they're
24 underinsured. And it's very difficult for them to

1 get adequate and appropriate treatment and to get
2 it in a timely fashion.

3 The other thing I want to close
4 with is substance-use disorders. And I heard
5 somebody say this a while back. Didn't understand
6 why insurance wouldn't pay for it and it was
7 discriminated against.

8 You can diagnose it. It has a
9 diagnosis code. Why don't we recognize it? We
10 recognize heart disease. We recognize diabetes.
11 We recognize other long-term illnesses. But for
12 this particular set of diseases, we discriminate
13 against it, and that shouldn't be going on. And
14 with that, questions?

15 MR. LERNER: Questions for Lillian?

16 MS. RUCINSKI: You mentioned before
17 the underinsurancce, the term "under insurance."
18 Can you talk about the number of times that
19 treatment is necessary for a addiction in order
20 for it to be effective?

21 And I know that there are
22 probably different forms of treatment. But I
23 know, too, that it usually isn't the first time
24 someone goes into treatment that they -- that

1 they're able to attend to their addiction. And
2 how that fits into what insurance covers for
3 addiction?

4 MS. PICKUP: Addiction is known as a
5 chronic relapsing disease. My favorite one to
6 liken it to is diabetes. When a kid is diagnosed
7 with diabetes, you have to teach them or they have
8 to learn to live with their condition.

9 Some people do recover the first
10 time they go through treatment. What causes that
11 to occur, I don't know. But usually there's
12 something adequate and appropriate going on.

13 Very often it will be a continuum
14 of care. Somebody may go through detox, may go
15 through residential rehab. It has to be of
16 sufficient duration because the person has been
17 physically impacted.

18 When I was running a detox center
19 in the 70s, I used to say I don't think they wake
20 up for six weeks. And so, you know, you have to
21 take some of these things into account. That it
22 has to be of sufficient duration. And people do
23 come back. And they may receive some of the same
24 treatment again, and it is effective.

1 But the insurance companies right
2 now, you may have ten days of residential
3 treatment in a year. I'm not sure if that's
4 adequate or appropriate. I'm not going to judge
5 across the board.

6 I'm saying addiction should be
7 treated as if they were any other disease.

8 MS. DAVID: Do you have any cost
9 estimates with the emerging amphetamine usage that
10 is more downstate as opposed to the metro area,
11 however, it is encroaching.

12 And then secondly, are there any
13 cost estimates to this new heroin opiate
14 overdoses?

15 MS. PICKUP: Methamphetamine -- we
16 have been treating methamphetamine and an
17 increasing number of methamphetamine users over
18 the past five years.

19 We don't have an overwhelming
20 number of them, okay? But we do have long waiting
21 lists for treatment and we can't always tell who
22 is on the waiting list.

23 Heroin and fentanyl. Heroin use
24 has been increasing in the State of Illinois for

1 the last twelve years. It has increased
2 geographically and demographically.

3 There are 95 deaths in Cook
4 County. We can't get the figures for outside of
5 Cook County. The youngest being 17, the oldest
6 being 65.

7 This is an epidemic. Heroin use
8 has been an epidemic. Mixing it with another
9 drug, this -- today it's fentanyl. The other
10 issue is that they're also mixing it with cocaine.

11 We have 600 people on the waiting
12 list for methadone treatment today in Chicago, so
13 those 600 people who are wanting treatment for
14 heroin addiction are vulnerable.

15 MR. SCHUBERT: Thank you, Lillian.

16 Mike Pelletier, Division of
17 Mental Health.

18 MR. PELLETIER: I'd like to read a
19 prepared statement that we had submitted
20 previously to Ralph and the Task Force.

21 My name is Mike Pelletier. I'm
22 representing Dr. Lorrie Rickman Jones, the
23 director of the Division of Mental Health of the
24 State of Illinois.

1 We, as the State Mental Health
2 Authority, are pleased to provide this
3 presentation in our opinions regarding specifics
4 to adequate healthcare coverage. This issue is
5 critically important to our consumers, that is
6 persons with mental illness.

7 The principles which my comments
8 flow are providing real access to and maximizing
9 access to care; and secondly, maximizing
10 availability of appropriate and effective
11 treatment services. Persons struggling with
12 mental illness deserve nothing less.

13 Four out of the ten leading
14 causes of disability are psychiatric illnesses.
15 Among developed nations, major depression is the
16 leading cause of disability.

17 Our society and our health
18 insurance structures are only beginning to come to
19 terms with this reality.

20 I imagine that some of you have
21 had the opportunity to read the surgeon general's
22 1999 mental health report on -- report on mental
23 illness. I would ask that we have a reference in
24 the materials that we submitted to you, a copy of

1 the executive summary. And we'd also have
2 references to the web site where you can get that
3 information.

4 This report and the data -- this
5 seminal report still stands seven years later as
6 the authoritative review on issues pertinent to
7 mental health and mental illnesses in the United
8 States.

9 This report and data from other
10 sources, such as the World Health Organization,
11 describe mental illness in its broadest sense, as
12 the second leading disease contributing to the
13 impact upon disability worldwide.

14 As we're thinking about the
15 changes to health insurance structures, we need to
16 pay very close attention to the observations of
17 this report. And I'd like to take some time to
18 emphasize some of them here.

19 One of the most important tasks
20 the Commission has, in my view, is to create real
21 access-effective treatment. That's a very brief
22 statement, but it has two very, very important
23 critical concepts. Real access and effective
24 treatments.

1 The first issue, real access.
2 The issue here is simple. Real access, when it is
3 there at all now, is quite haphazard.

4 Insurance companies and
5 third-party payers have been discriminating
6 against persons with mental illness for years.
7 Someone with a serious mental illness who has an
8 arbitrary 8, 10-or 20-session limit for outpatient
9 mental health visits doesn't have real access.

10 If this same consumer was to
11 enter the hospital, was told that their hospital
12 stay must end, conveniently corresponding to the
13 coverage day limitations of their insurance policy
14 and before their acute symptoms are resolved,
15 that's not real access.

16 And when the doctor or the social
17 worker who is advocating with the utilization
18 review person is told we're not saying you can't
19 stay in the hospital, we're just saying we won't
20 pay for your care while they're in the hospital.
21 well, that's just a cruel joke and worst yet, it's
22 a very sad commentary on the lack of value placed
23 upon mental health treatment.

24 Third-party payers should cover

1 psychiatric conditions to the same degree that
2 they cover all other serious health conditions.
3 And I certainly hope anything that comes out of
4 this Adequate Health Care Task Force includes a
5 strong recommendation that we end the practice of
6 discriminating against persons with psychiatric
7 illness.

8 In the states where parity has
9 been implemented, the long-term costs for mental
10 illness has not increased, but rather decreased
11 the expenses to the insurance carriers, especially
12 when preventive and early use of evidence-based
13 treatments are calculated into the regimen.

14 Finally, of course, we know that
15 our consumers are disproportionately disabled,
16 either temporarily if not permanently, as a result
17 of their mental illness. And that our consumers
18 are more likely than most other persons to have no
19 coverage or health insurance at all.

20 Second, effective treatments. I
21 want to say a few words about effective treatment.
22 Also and dramatically under-appreciated is that
23 there exists a wide, broad range of
24 well-documented, highly effective treatment

1 options for mental illness.

2 The effectiveness of some of
3 these treatment options actually rivals or even
4 surpasses effectiveness rates of treatments for
5 other medical diseases or illnesses.

6 Clinical depression, for example,
7 has a higher treatment success rate than any other
8 illness. We refer to these highly effective
9 treatment options as evidence-based practices.
10 That's because their effectiveness is documented
11 by multiple, high quality and replicated research
12 studies.

13 Just to give you a flavor of what
14 I'm talking about, I want to briefly describe one
15 extremely powerful treatment for schizophrenia
16 called, "Family Psycho Education." In Family
17 Psycho Education, the clinician works with the
18 family of the person who is ill.

19 The family is given information
20 on the illness, on the medication, side effects
21 and expectations. The family is engaged with the
22 primary mental health clinicians and seen as a
23 valuable source of information.

24 So if Joe, as a schizophrenic,

1 goes with his wife or dad to the psychiatrist and
2 Joe says "none," when he's asking about
3 hallucinations, his wife or his father can say,
4 you know, Doc, three or four days last week he was
5 talking to people and there wasn't anybody in the
6 room when he was doing this.

7 The doctor can then prescribe
8 medications based on all the information, and Joe
9 isn't deprived of treatment just because he
10 doesn't have insight into his own condition.

11 Additionally, the family is given
12 information on adaptations that can be made in the
13 home environment. We currently do this for other
14 illnesses.

15 with heart surgery, doctors make
16 sure that the patient isn't subjected to
17 secondhand smoke. With diabetes, whoever is doing
18 the cooking or the meal preparation is taught how
19 to prepare meals within ADA guidelines.

20 As well with schizophrenia in
21 this family psycho-educational model, families are
22 taught, for instance, to minimize situations in
23 which two or more conversations are happening at
24 the same time or at once, in order to accommodate

1 the ill person's problems with information
2 processing.

3 The results from family education
4 are absolutely phenomenal. Consistently fewer
5 relapses and consistently lower costs of care
6 mainly due to consistently lower rehospitalization
7 rates.

8 Over the last 30 years, the value
9 of this treatment has been proven over and over
10 again. And in my section, we have references to
11 research articles that document these findings.
12 This is just another example of a treatment for
13 serious mental illness with an experienced and
14 robust outcome.

15 So with good news like this, why
16 I am sitting in front of you talking to you today.
17 Because these treatments aren't delivered
18 routinely. It's very hard to change people's
19 behavior. And that statement goes to clinicians
20 in the mental health field as well.

21 The question as to why a person
22 with mental illness can't walk into the community
23 mental health center or doctor's office and expect
24 he or she will be given the most effective

1 treatment is a complicated one.

2 But one of the most important
3 reasons is third-party payers have yet, as a
4 group, begun to change their reimbursement
5 practice to use these extremely effective
6 treatment programs, and to fully reimburse
7 providers for that.

8 This is one of the most serious
9 healthcare access issues in our country. One of
10 my main goals here today is to convince you to
11 include among your recommendations, one key
12 recommendation for mental healthcare. And that is
13 to cover evidence-based practices.

14 Public and private insurance
15 companies are literally spending billions of
16 dollars paying for treatments that haven't proved
17 to be effective.

18 Leaving aside for a moment the
19 obvious injustice to a person with a serious
20 mental illness, let's take a crass and limited
21 financial look at this situation.

22 It doesn't make financial sense
23 for insurance companies or providers to leave out
24 evidence-based practices, because when people stay

1 out of the hospital, and they will, and to a
2 greater extent when they receive these effective
3 treatments, the system as a whole saves tons of
4 money.

5 Real access would need to include
6 acceptance by the insurance provider communities
7 of well-established, extremely effective services
8 that currently most third-party payers don't
9 reimburse. These services, however, often show
10 the greatest benefit to persons recovering from
11 mental illness.

12 I'll be happy to provide you with
13 any further information or information about these
14 services at a later date.

15 Services like case management.
16 Certification -- community treatment, supportive
17 employment, are typically not within insurance
18 benefit packages.

19 The division of mental health
20 wishes to strongly advocate for greatest
21 availability of these effective mental health
22 treatments.

23 Illinois has done some historic
24 things for healthcare in the last few years. We

1 were the first to stage -- a large state to step
2 in and guarantee that senior citizens and persons
3 with disabilities wouldn't have to go without
4 their medications just because the federal
5 government had difficulty rolling onto Medicaid
6 Part D.

7 we have greatly expanded over the
8 years the number of persons who are eligible for
9 public sector insurance. This current effort in
10 which DMH is proud to play a role means that we,
11 as a state, are officially on the role when it
12 comes to doing the right thing for healthcare
13 coverage.

14 Let's make it even more dramatic
15 and more of a project we can be proud of by
16 expanding the right thing to include real access
17 and real effective treatments for our most
18 vulnerable citizens.

19 DMH has advocated the use of
20 evidence-based treatments in our state-operated
21 hospitals, as well as we train, support and fund
22 several evidence-based technologies to our
23 community providers.

24 Adequacy -- or rather

1 inadequacies of healthcare coverage for mental
2 illness isn't just a matter of the difference
3 between the features of individual medical plans,
4 distinct or differential or high deductibles, or
5 gaps in regard to what services are reimbursable.
6 It is more and mostly about the invisibility of
7 coverage to a very visible, equally viable and
8 historically resilient population of Americans.
9 We live in a shattered world of a very deep crack
10 in the system.

11 The consumer movement within our
12 sector has had incalculable influence as to how
13 consumers become empowered in directing their
14 care. How treatment providers do consumers. How
15 we are all regularly, consistently and incessantly
16 reminded that persons recover from mental illness.
17 We must do all we can to support these recovery
18 stories.

19 The Division of Mental Health is
20 developing and strengthening our current systems
21 for facilitating the collaboration with our system
22 partners and our providers towards the development
23 of a recovery-oriented mental health system.

24 This collaboration can only be

1 enhanced by increasing adequate healthcare
2 coverage. Increasing healthcare access hopefully
3 will be assisted by the efforts of this task
4 force.

5 I have provided in this written
6 statement, a research article, reference materials
7 in terms of documenting the quality of the
8 statements that I've talked about.

9 I've also given an executive
10 summary of the surgeon general's report of 1999
11 that I referenced.

12 I've given you five examples,
13 brief examples of definitional characteristics of
14 at least five of the evidence-based programs that
15 we have.

16 We are in active rolling out of
17 our integrated dual diagnosis treatment plan with
18 our associate Division of Alcoholism and Substance
19 Abuse. We are in active, very aggressive
20 discussions and operationalization in doing some
21 pilot projects in about three or four sites across
22 the State with our division of rehab services, in
23 terms of funding and piloting programs for support
24 of employment programs.

1 And we are doing in our
2 state-operated facilities a number of programs.
3 Typically the one most commonly referred to is
4 "Medication Algorithm Program" which places strict
5 guidelines in terms of how medications are
6 prescribed, or specific conditions and how those
7 prescription patterns can enhance both the results
8 of -- enhance and track the active results of
9 those medication regimens for our consumers.

10 I'd be happy to take any
11 comments.

12 MR. SCHUBERT: I think Sara and I
13 have all that material. We got it a little late,
14 but stuff happens. And we'll get that around to
15 everybody.

16 MR. CARVALHO: One quick related
17 question.

18 If an employee wanted to purchase
19 a plan from an insurance company that had parity,
20 are plans available or are they just not even
21 available on the market? So is the choice the
22 insurance company or the employers, is the first
23 question.

24 The second question is does the

1 state provide parity under Medicaid? And third,
2 does the State provide parity under state
3 employees' health insurance plans?

4 MR. PELLETIER: I'm not sure how to
5 answer your first one, whether or not --
6 obviously, any employer can go to any insurance
7 company and say this is the package of benefits
8 for which I want to purchase. And then based on
9 that package, obviously, it's going to be priced.

10 I think the larger issue is both
11 the insurance community pretty much and in
12 generalities, as well as the provider community,
13 just doesn't really appreciate or have an
14 understanding of the types of services that we're
15 talking about here that would precipitate a
16 discussion between an employer and an insurance
17 company to say hey, listen, I really want to add
18 on assertive case treatment because it appears
19 that I've got ten employees in my company that
20 have a serious mental illness and have relapsed
21 into hospitalizations, or some types of serious
22 concerns.

23 And in a current insurance, the
24 way insurance is funded, predominantly through

1 self-insurance policies, the employer will see
2 that actual cost coming across to them.

3 So there's just a lack of, I
4 think, real sufficient education and knowledge
5 about what services should be made available to an
6 employer to purchase on behalf of consumers, the
7 employees, or the employees' families that are
8 significant and related to actually effective
9 treatments.

10 The Medicaid program has basic --
11 two manners in which Medicaid persons are --
12 services to Medicaid-eligible persons are
13 reimbursed.

14 One is through the HFS Medicaid
15 program. And that's typically for medical
16 providers, physicians, dentists, osteopaths and
17 hospital providers. And that's a fairly routine
18 insurance coverage.

19 That insurance coverage has much
20 more of the quality of parity considerations.
21 There are no arbitrary limits in term of days
22 covered under Public Aid for hospitalization
23 services. There are no arbitrary limits on the
24 predominance of outpatient or in-office visits for

1 Medicaid.

2 The second way in which
3 Medicaid-eligible consumers receive services is
4 through the Division of Mental Health, which also
5 has Rule 132 and rule -- under 132 and under Rule
6 130, that regulates the way in which DMH,
7 Department of Corrections, and DCFS also use these
8 rules to purchase mental health services for their
9 consumers.

10 Those services are highly
11 regulated, again, under that rule. Those services
12 are now -- in fact, we're in the process of adding
13 some of these evidence-based practices for
14 coverage under these things.

15 There are specific limits in
16 terms of what we can do. We do have to modify the
17 Medicaid state plan to incorporate these services
18 into our Medicaid state plan to make them
19 available to consumers. But many of these
20 services, assertive case treatment, supportive
21 employment is something we're talking aggressively
22 about bringing into the Medicaid state plan as
23 well.

24 The state -- insurance for state

1 insurance is run through a usual type of insurance
2 programming where it's based with one of the
3 insurance carriers. And I do know that
4 psychiatry, as well as alcohol and substance abuse
5 benefits, there is a managed care corporation that
6 manages the benefits in this program.

7 MR. BACKS: Basically, you're talking
8 about parity. And I guess I would use maybe a
9 slightly different term for it. Mainstreaming in
10 the sense being a clinician, internist who doesn't
11 -- isn't a psychiatrist, but plays one in my
12 office quite a bit, treating chronic depression
13 and anxiety disorders. And actually, those are
14 reimbursed in my practice as medical conditions.
15 I explain these conditions as brain diseases to
16 individuals.

17 I preface my question with those
18 remarks because I wonder if at the same time we're
19 talking about mainstreaming benefits or parity of
20 benefits, treating mental illness like other
21 medical illnesses with evidence-based treatments
22 and the same type of coverage.

23 It is also possible there may be
24 time to reexamine the stigma that is created by

1 the special circumstances that are required for
2 the treatment of patients in a mental health
3 system that requires special consent, special
4 concerns about confidentiality creating this sort
5 of aura that this is somehow something that we
6 need to treat in a special way, when in fact, as
7 we learn more and more from a neuroscience point
8 of view, these are simply brain diseases that are
9 susceptible to the same kind of interventions as
10 heart disease and lung disease and other types of
11 diseases.

12 My own opinion is that movement
13 in that direction would go a long way to make the
14 people more comfortable with parity of benefits on
15 the benefits side.

16 MR. PELLETIER: Well, I certainly
17 think, obviously since it's been 35 or 40 years
18 since we implemented both the Mental Health Code,
19 as well as the Confidentiality Act, those codes
20 have consistently been updated, and those things
21 are the things that regulate our industry.

22 Certainly modifications to those
23 things to make access more transparent would be
24 things that would be appropriate for us to look

1 at. And we think that that is certainly
2 happening, but, of course, there's also been the
3 reason those legislations were placed into -- into
4 statute is because of the severe abuses that were
5 done in the past.

6 Certainly it would go a long way
7 to equalizing it to look at ways to equalize that
8 across the board and make it much more transparent
9 within the medical community.

10 MR.SCHUBERT: Taking a page out of
11 Wayne Lerner's imminent text on meeting
12 facilitation -- we're about ten minutes behind, so
13 I want to pass the baton next to Gerri Clark from
14 the UIC Division of Specialized Care for Children.
15 Then we'll take a break and the panelists will
16 hang around for five minutes --

17 MS. DAVID: Ralph, this is important
18 now.

19 MR. SCHUBERT: I'm sure it is.

20 MS. DAVID: This is about the mental
21 health reorganization. DD told us how much money
22 they had saved through the Medicaid match. We'd
23 like to know how much money you saved and what
24 you're doing with your money.

1 MR. PELLETIER: One of the things we
2 have done with the Medicaid match is to -- the
3 monies that we get under Medicaid match come back
4 into our systems in our 718 fund. Those --
5 remember, the Medicaid match is reimbursing the
6 state for which services the state has already
7 purchased.

8 It's not savings of money.
9 Really just reimbursing the system for 50 percent
10 of what the state has always obligated to folks.

11 There are -- that money, again,
12 taken in -- together with the monies that are
13 obligated and generated out of the general revenue
14 fund, those monies have been reinvested in the 718
15 fund. The 718 fund is expected to grow, I think,
16 next year about anywhere from 14 to 25 million.

17 That would give us the
18 opportunity to, we think -- I think we've got --
19 I'm not sure if the governor signed that. We did
20 get through the general assembly a modification in
21 the 718 fund language that allows the Division of
22 Mental Health to reinvest a large portion of that
23 money. Like I said, about -- anywhere from 7 to
24 \$14 million into doing new pilot projects and new

1 services back in the community.

2 But all of those monies that come
3 into the system are predominantly reinvested back
4 into the system. And that's been a major
5 modification over the last two years.

6 MR. SCHUBERT: Gerri, you're on.

7 MS. CLARK: I'm representing
8 Dr. Charles Onufer, who is the director for the
9 Division of Specialized Care for Children. He was
10 unable to be here today, so you've got me.

11 We are the Title 5 program for
12 children with special healthcare needs. Every
13 state has one. As Ralph said, we're one of three
14 states that has this program within a university
15 setting.

16 We have a combination of federal
17 and state funding. The federal through the
18 Maternal Child Health Block Grant, which Ralph
19 graciously shared with us, or not so graciously.

20 MR. SCHUBERT: It's a federal law
21 anyhow.

22 MS. CLARK: It's a law. We serve
23 children up to age 21 who meet our medical
24 eligibility criteria.

1 We have, because of limited
2 funding, had to basically restrict the categories
3 of health conditions or medical conditions that we
4 serve in order to be able to provide anything to
5 anybody.

6 But we do help families who have
7 insurance to use their insurance effectively. We
8 help them to advocate when they have problems with
9 their insurance.

10 We do also require all families
11 who are eligible to apply for Kid Care. And now
12 it will be for all kids.

13 We won't be able to require the
14 families who are not financially eligible for us
15 to do that, but we will encourage them to because
16 it certainly provides a comprehensive service
17 package for them.

18 But for the children who would be
19 financially eligible for our assistance, and our
20 assistance would be more in gap filling, we do
21 require them to apply for the public insurance
22 that is available.

23 So as we look at All Kids being
24 implemented, we will still need to assist the

1 families who have, perhaps, not fulfilled that
2 one-year uninsured status period for -- depending
3 what the reason was that they lost their
4 insurance. They might be eligible if it's because
5 of a loss of a job on the part of the parent. But
6 I won't go into all those little details. We do
7 try to assist families who are also underinsured.

8 And if we can go to the next
9 slide, this is a survey that was done by the
10 national or the Federal Maternal and Child Health
11 Bureau. In Illinois, they surveyed about 750
12 families. And you can see that those families
13 indicated -- families that have children with
14 special healthcare needs, those families indicated
15 that at least 40 to 50 percent of them were not
16 adequately covered by the insurance they had,
17 whether it was public or private insurance.

18 We serve about 10,000 children at
19 any one time, although we probably touch closer to
20 20,000 within a year's time.

21 Families come to us for our care
22 coordination or case management services as much
23 as they do for our financial assistance, and our
24 care coordination staff, our nurses, social

1 workers, speech pathologists and audiologists who
2 help families navigate the healthcare system.

3 Help them understand their
4 coverage, and then identify what other services
5 are necessary. And if there are resources within
6 the community, as its children. Also assisting
7 them with their educational services. Helping
8 them advocate through a number of ways.

9 You can see that we have looked
10 at the payer mix that the families that have been
11 in our program over the last seven years have had.
12 And you can see that the public insurance has
13 gradually increased, and that, of course, was due
14 to Kid Care and our requirement that they apply
15 for and use Kid Care.

16 Private insurance seems to have
17 decreased somewhat, not extreme, but somewhat.
18 And then the yellow would be where we were the
19 primary payer. And with All Kids, it would seem
20 that we would be able to move that down even a
21 smaller amount. But as I said, there may still be
22 some situations in which the family don't qualify
23 for All Kids.

24 And the next slide. Actually, it

1 might be easier if you look at the handout,
2 although that's pretty tiny. I'm sorry. Because
3 I would like you to compare this slide with the
4 next slide in a way.

5 This slide specifically is an
6 analysis of the top 20 services that DFCC has paid
7 for as a gap filler. You can see ramps and lifts
8 are something that very few other payers will pay
9 for.

10 Diapers, you can see, were big
11 expenditures in 2002. We had to change our policy
12 and we did also get a contract, so that has moved
13 down as we look at the 2005.

14 But hearing aids again, are not
15 consistently covered by insurance. And is -- even
16 within Medicaid, it's covered minimally.

17 If you'll look at line 8 on the
18 2002 travel for family, that is what we consider
19 an enabling service, and that is to assist
20 families to access the speciality services that
21 are not available in their immediate community.

22 You can imagine in Southern
23 Illinois we often have families that have to go
24 all the way to St. Louis. And there are costs for

1 those families. And if they're financially
2 eligible for us, we can assist them with that.

3 None of this slide or the next
4 slide that you can go to, none of those include --
5 when it says, "Paid by others," none of those
6 include Medicaid or All Kids. We don't have
7 access to that data, so this is strictly private
8 insurance that would be considered paid by others.
9 And you can see those are pretty much the typical
10 medical services that they tend to cover.

11 I would say that in conclusion,
12 we have identified gaps, certainly in services,
13 sometimes due to the lack of providers of the
14 specific specialty that would be needed by these
15 children, and sometimes because of the lack of
16 payment that is available to them.

17 For instance, for children of
18 cleft pallet or other facial anomalies,
19 orthodontics is a critical part of paying for
20 surgery and completing the surgery, resolution
21 from the surgery. And that is often covered
22 inadequately for those children.

23 we have become involved in the
24 newborn hearing screening program in the State and

1 we're finding while our goal is to have the babies
2 screened by one month, diagnosed with the hearing
3 loss by three months and have the hearing aids and
4 early intervention services by six months.

5 Because we can not find providers that either have
6 the adequate training and equipment to diagnosis
7 these babies, or because they cannot find
8 reimbursement for the hearing aids, cannot get the
9 hearing aids in time, this affects their special
10 development.

11 If they can get those services by
12 six months, they're able to be on a par with their
13 peers in speech development. If they do not, it's
14 much slower for them.

15 And one more thing is since we
16 serve children up to 21 and All Kids goes up to
17 18, there is certainly that older age group that
18 really don't have good access to either their
19 parents' coverage because they have left high
20 school or because they do not qualify as a person
21 with a disability for Medicaid. They don't have
22 coverage. And you've probably heard that from our
23 groups before. It's very difficult for us.

24 When it's a person who maybe has

1 a cardiac condition, who still needs to get the
2 healthcare, and they just don't have coverage for
3 it. And while they like to think that they're
4 pretty much invincible at that age, they really
5 aren't.

6 MR. LERNER: We have a --

7 REPRESENTATIVE COULSON: I have a
8 quick question. What happens after 21?

9 MS. CLARK: We try to have them find
10 some sort of a coverage, but it isn't easy.

11 REPRESENTATIVE COULSON: So they're
12 eligible for your program, as well as school-based
13 services until they are 21.

14 MR. LERNER: One more quick question.

15 MR. MURPHY: Mr. Ralph Schubert,
16 first I want to commend you and the department.
17 These are very direct and unambiguous statements.

18 I guess, just generally in regard
19 to the same question I asked of Rob Kilbury, are
20 these department opinions or they official
21 sanctioned opinions of the governor or
22 administration or just the agency?

23 MR. SCHUBERT: I don't think we went
24 all the way to the extent of like vetting them

1 through the governor's office.

2 I think what you heard from are
3 people who, in some cases, for many, many years
4 are working very hard on the services for their
5 particular population of interest, and bring the
6 benefit of all of that -- all of that scholarship
7 and all of that experience to the Task Force
8 today.

9 MR. MURPHY: So they should be
10 considered as agency petitions?

11 MR. SCHUBERT: I would think so,
12 yeah.

13 MS. SIMS: I want to point out too, I
14 don't know whether you noticed, when highlighting
15 the need for dental care, preventive dental care
16 for adults, I indicated that that's something that
17 we hear repeatedly at our statewide advisory
18 council. So that's not a position of the
19 administration. That is what our advocates tell
20 us that I wanted to bring to you today.

21 MR. LERNER: We got it. I know.
22 It's like pulling teeth. I'm sorry. It's mid
23 afternoon.

24 On that note, I'd like to also

1 thank Ralph and his colleagues for a really
2 wonderful time. Thank you very much.

3 We'll take a three-minute break.

4 (Whereupon a recess
5 was had)

6 MR. LERNER: Ladies and gentlemen,
7 I'll take a motion approving the model we want to
8 recommend.

9 What I want to do now is get to
10 the other part of our agenda, which will then be
11 what will take us forward.

12 Just to remind people of exactly
13 what we're doing, we are going to evaluate, going
14 to talk about the evaluation process that we're
15 going through.

16 And the time frame, to remind
17 you, is that what's supposed to happen at the July
18 meeting, based upon our conversations today about
19 the evaluation mechanism, the July meeting, six
20 models would be coming back to us well in advance
21 of the meeting so we can do some homework; and we
22 come prepared at the meeting, looking at the six
23 models and how they play out against the
24 evaluation criteria.

1 Out of the July meeting, we would
2 then recommend one or more -- preferably one, but
3 one or more models to go forward for final
4 discussion at the August meeting.

5 At the August meeting, we would
6 make our final recommendations. And then August
7 and September would be the final write up. And
8 September is the big party. That's kind of the
9 plan. That's what we talked about in the steering
10 committee. That's what we talked about with the
11 Task Force.

12 MS. ROTHSTEIN: One question. Did
13 you say we would present only one?

14 MR. LERNER: I said hopes would be
15 one, but we'd see where we go. That's Wayne.
16 That's not the agency position. That's a Wayne
17 position.

18 MS. ROTHSTEIN: I'm glad. I was
19 going to ask you that.

20 MR. LERNER: But I'm still the Chair.
21 That's right. Anyway, so that's where we want to
22 go with this. And I'd like to take it up.

23 Now, I understand many of us did
24 not get this material until late last night, so

1 there's some concerns about how far we can go
2 embedding it. So as we start to go through this
3 presentation, I want you to think about something.

4 I'd really like to keep to the
5 timetable we've got. And if we need more time to
6 vet the evaluation process, we have a couple of
7 alternatives.

8 One, we can call another
9 face-to-face meeting. Two, we can have a
10 conference call. Three, we can iterate this
11 through e-mail or internet-based mechanism; or
12 four, we can do some combination of the above.

13 So I want us to have enough time
14 to go through this evaluation process. Navigant
15 and Mathematica will give us the gestalt, the big
16 picture about how they did this, but we've really
17 got to get over this hump, so that they can get to
18 the point of evaluating the models; is that fair?

19 MS. TAYLOR: It's mostly correct.
20 Actually, in advance of presenting the evaluation
21 criteria, we had a report, a finding from our
22 access study. I think -- and that's what Heather
23 is passing out, and the evaluation criteria part
24 of the presentation which Kathy will present, is

1 going to follow.

2 And our sense is we're probably
3 more interested in discussing and debating the
4 evaluation criteria, so I was going to go through
5 the access finding fairly quickly. But please
6 stop me if you have questions. And I'm Lynn
7 Taylor from Mathematica, by the way; is that fine,
8 wayne?

9 MR. LERNER: Yes.

10 MS. TAYLOR: A little part in the
11 front there.

12 MR. LERNER: Again, I want you folks
13 to be sensitive that we folks have not had a lot
14 of time to sponge this in.

15 MS. TAYLOR: I'm a very sensitive
16 person. And I want to provide access to the
17 information for you, all right?

18 MR. LERNER: Go for it.

19 MS. TAYLOR: So in the interest of
20 getting to the evaluation criteria, which is
21 critically important, I will go fairly quickly.
22 And some of this material you've heard before from
23 the excellent people who have been presenting
24 here. Please stop me if you have questions.

1 As you know, the Illinois Health
2 Care Justice Act states, "It is a goal to ensure
3 access to quality healthcare at costs that are
4 affordable." This is your task.

5 It doesn't define what access is
6 in the Act, so I'm providing this definition from
7 the Institute of Medicine, which as you can see,
8 is the timely use of personal health services to
9 achieve the best healthcare outcome.

10 This implies that -- this
11 includes both the use and the effectiveness of the
12 healthcare services and encompasses physical
13 accessibility of the facility. So this is a
14 working definition.

15 In terms of reporting back to the
16 Task Force on what access is like in Illinois, we
17 had to look at what data is available to us. And
18 there's a range of data, some of which is better
19 than others.

20 Over here on your left,
21 self-reported access measures. For example, from
22 the BIRPA data would be the most direct measure of
23 access we can observe in this state; however, that
24 data has limitations that I'll talk about briefly.

1 So we also looked at other
2 measures. We looked at some utilization and
3 outcome measures which might be indicators of
4 access problems. And we looked at the prevalence
5 of barriers to access. So we'll talk -- so that's
6 sort of the three sections of presentation.

7 But something to keep in mind as
8 you get down here, this is a less direct measure.
9 We assume that the presence of barrier causes a
10 lack of access. We're not directly measuring it.

11 The first thing we're to look at
12 is whether or not you have a usual source of care.
13 And there's been a lot of research which says
14 having a usual source of care is even more
15 important in terms of health outcome than having
16 coverage itself, not that coverage isn't
17 important.

18 We look at this measure using the
19 BIRPA data which is collected within the State.
20 As a caveat, the only thing that's collected for
21 every county in the State is whether or not you
22 have a usual provider.

23 Usual source of care is typically
24 defined as having the usual place of care, but

1 that's not collected for every county in the
2 state, so this is a proxy measure. It's a very
3 good proxy measure, but in case anybody is very
4 familiar with these access measures, I wanted to
5 clarify that.

6 As you can see here, there's a
7 theme from this slide that is repeated throughout
8 our finding. Illinois on average as a state --
9 it's a large state. And not surprisingly, it is
10 very similar to the US. Around 80 percent of the
11 population, by the time of incorporate standard
12 error, have a usual source of care.

13 The Healthy People 2010 goal is
14 quite a bit higher. They would like to see, I
15 think it's 96 percent of the population having
16 access to a usual source of care.

17 Chicago, consistently, is a
18 little worse than the State as a whole. I'm sure
19 that will not surprise you after all the meetings
20 you've had.

21 MR. LERNER: Can I ask a real quick
22 question.

23 MS. TAYLOR: Yes.

24 MR. LERNER: The usual source of care.

1 Somebody says I usually get my source through the
2 emergency room, is the answer yes?

3 MS. TAYLOR: The question is, you
4 have a usual place of care. That would be one of
5 the acceptable answers. But sometimes when you're
6 measuring access, you would exclude that answer as
7 being a suitable source of care. But a clinic
8 would count as a suitable source of care.

9 In that case, as I mentioned
10 before, the only question that is asked at every
11 county in the State was whether or not you have a
12 usual provider in your care. So it was a slightly
13 different question.

14 MR. LERNER: So someone who is
15 accessing one of the free clinics, for example,
16 would report yes?

17 MS. TAYLOR: No. Would report no, if
18 it's not the same person they're going to every
19 time.

20 MR. LERNER: I see, because it's not
21 the same provider.

22 MS. TAYLOR: Right. The two track
23 fairly closely with the usual source of care --
24 I'm sorry. Usual place of care, to be more

1 precise, okay?

2 Again, here's some themes that I
3 won't repeat incessantly, but is very -- we found
4 a lot as we looked at some of the scales. So
5 that's an example of a direct access major, one of
6 the few really that are available to us.

7 Moving onto utilization measures,
8 we looked at a number of different data sources
9 that looked at utilization. And the message is
10 mixed. Again, in general, it's the same as the
11 US, not quite up to Healthy People 2010 goals, but
12 Chicago, and sometimes rural areas seem a little
13 worse than the statewide averages.

14 But here's a few examples of some
15 other things going on. I think this dental
16 statistic is particularly interesting. For
17 whatever reason -- and my investigations have not
18 come up with a good answer. The Healthy People
19 2010 goal for having an annual visit to the
20 dentist is low, much lower than I expected.

21 I actually contacted somebody at
22 the ADA to say what do you think of this Healthy
23 People 2010 goal. The way that they came up with
24 it is that it was better than the prevailing rate

1 at the time they came up with their objectives.

2 Is everyone here somewhat
3 familiar with Healthy People 2010?

4 I'm sorry. This is a work group
5 comprised of representatives from all different
6 government agencies and other organizations
7 designed to come up with a set of priorities that
8 will eliminate disparities in care and increase
9 access to care.

10 And they have oh, seven or ten
11 focus areas. And to support achieving or work in
12 those focus areas, they have just under 500
13 objectives. And these objectives are things like
14 percent of the population with the usual source of
15 care. And it was this level in 1990. We'd like
16 to see this level -- was this in 2000, we'd like
17 to see this in 2010. And they have different ways
18 of determining what those objectives might be.

19 It's a common benchmark that a --
20 for example, you heard today that communities,
21 there's state planning initiatives, and
22 communities have to measure what healthcare access
23 looks like in their community.

24 Measuring themselves against the

1 Healthy People of 2010 benchmark is a fairly
2 common benchmark, but it is not the only one. And
3 I'm going to argue in the case of dental, it
4 probably would not be a good one to use. I think
5 it's -- personal opinion, I think it's too low.

6 A little over 70 percent of state
7 residents did have an annual dental visit, but as
8 you -- you can't see it from this slide, but as
9 you go down the income stream, that statistic
10 becomes much worse. It's highly income related.

11 Receiving adequate prenatal care,
12 we are above. This is Illinois, and that's the
13 Healthy People 2010 goal. The state is pretty far
14 below that goal, and I think that would be a valid
15 one to shoot for. But, again, at the statewide
16 level, they're not doing too badly on mammograms.
17 Chicago looks worse.

18 And they have a little ways to go
19 in terms of fully immunizing their two year olds.
20 These are just samples, utilization measures that
21 you can look at that might indicate there are some
22 access problem.

23 I don't think I mentioned it, but
24 the BIRPA data, which was the source for much of

1 that information but not all, only surveys adults.
2 It's a little bit harder to come by access
3 measures related to children. This is a little
4 bit of information from a national survey of
5 children health status that we've done. And
6 again, Illinois stacks up well compared to the
7 nation.

8 We do not have good information
9 at the county level from this national survey.
10 And again, don't be fooled by the preventive
11 dental. There are some large problems as you get
12 into lower incomes, to a much greater extent than
13 you would see in terms of access or having well
14 child visits in the past year.

15 This is an area where the
16 avoidable hospitalizations are conditions where
17 you're admitted to the hospital that could have
18 been avoided if adequate ambulatory care had been
19 received. And the physicians in the group may
20 want to slightly correct that definition, but
21 that's the basic idea.

22 This an area where -- again, this
23 is fairly old data. It's 2002. It's the most
24 recent I could find. But this is an area where,

1 unfortunately, Illinois is a little worse than the
2 US. And you were doing good so far in my
3 presentation.

4 And as you can see, we don't have
5 Healthy People 2010 goals for all of these areas,
6 but Illinois, in this case, had almost 20 per
7 100,000 more admissions for this condition than
8 the US as a whole. And it was far, far higher
9 than the best ten -- the states that had the
10 lowest rates where they managed to control it,
11 which is what the red bars are.

12 I think this is an example of
13 where you should probably look at other benchmarks
14 besides Healthy People 2000, because where you see
15 -- where we do have a measure from those work
16 group objectives, it's often much higher than the
17 top 10 percent of the State, which, again, is the
18 red bars. So you do have to take these with a
19 grain of salt, I think.

20 MR. ROBBINS: Out of curiosity,
21 if you were to look at hospitalizations per
22 100,000 for the general population, would Illinois
23 be higher than --

24 MS. TAYLOR: That is a good question,

1 and I don't know the concise answer. I know you
2 have a lot beds for 1,000, which usually means a
3 lot of admits --

4 MR. ROBBINS: My guess would be the
5 answer would be yes, and then I wondered what that
6 tells us about this. Try to isolate this.
7 Whether that's meaningful -- as meaningful.

8 MS. TAYLOR: Right. In other words,
9 as a percentage of your total admissions, maybe
10 it's in line with some other state.

11 MR. ROBBINS: That's my hypothesis,
12 but I'm not --

13 MS. TAYLOR: Right. However, that
14 would not detract from the fact that this may be
15 an opportunity to save -- there may be too little
16 ambulatory care in the system compared to the best
17 ten. And there also might be an opportunity for
18 cost savings.

19 MR. LERNER: Ken, is that a condition
20 like supply drive and demand, so with enough
21 supply you've established a demand?

22 MR. ROBBINS: I wouldn't say that
23 publicly, but possibly that would be true.

24 MR. LERNER: Okay. Well, I didn't

1 say it publicly either, even though it's on the
2 transcript.

3 MR. DUFFETT: What's the percentage
4 of those who are insured and those who are
5 uninsured?

6 MS. TAYLOR: Oh, that is a good
7 question. The State of Connecticut did a study
8 and -- which is a very small state, but I think
9 about half of them were insured. This is not only
10 uninsured people.

11 One of the things I'll be talking
12 with in my presentation and in the report that's
13 forthcoming, is that there appear to be some --
14 the access problems exist both in the insured and
15 uninsured population. But there's not great data
16 on that, per the State of Illinois. But I did
17 look at the study through Connecticut.

18 MR. LERNER: So the takeaway on this
19 one is there's plenty of opportunity from a
20 prevention point of view to bring ourselves in
21 line with other types of benchmarks than simply
22 just tracking previous experience?

23 MS. TAYLOR: Yes. I would say that
24 there's three takeaways.

1 I'd say the first takeaway is we
2 may want to look beyond the Healthy People 2010
3 goals for some of the measures. I mean, we should
4 think critically about them.

5 Secondly, that there may be
6 instances of inadequate ambulatory care leading to
7 these hospitalizations, which some of them are not
8 avoidable, but in general, they're avoidable.

9 And lastly, there may be
10 significant cost savings to the system by treating
11 these conditions in the ambulatory settings, okay?

12 MR. LERNER: Okay.

13 MR. KOEHLER: Can I ask a question?

14 MS. TAYLOR: Yes.

15 MR. KOEHLER: Would this show up,
16 especially with the uninsured numbers that are
17 reflected in that, where somebody would not have
18 the right kind of primary care and would wait
19 until something catastrophic would happen and then
20 would go to the emergency room and end up in the
21 hospital? I mean, does that show up --

22 MS. TAYLOR: Is that a scenario --
23 yes, yes.

24 For example, asthma. We had

1 pediatric and adult asthma. And I think it was
2 adult asthma that the State really fared pretty
3 poorly on. Yeah, that's the idea.

4 I think most researchers would
5 not attribute all of these avoidable
6 hospitalizations to inadequate ambulatory care in
7 isolation. There's always other factors going on
8 like, you know, what -- we've talked, I think, a
9 little bit in an earlier presentation about if the
10 population keeps its appointments. Do they do the
11 things that -- there's multiple things going on.
12 Doesn't change the fact that it's still an area
13 for focus.

14 MR. BACKS: Just to comment on that.
15 These are conditions that's absolutely crystal
16 clear that ongoing, adequate, preventive care has
17 better outcomes, which hospitalization equals bad
18 outcome. The patient got sick. They didn't have
19 to. That's why they're easily picked, whereas
20 there's no question if it's done right, if there's
21 compliance, you get better outcome, lower costs.

22 MR. LERNER: This is reflective of
23 the article in the wall Street Journal I was
24 talking about. That's exactly right. Ken?

1 MR. ROBBINS: I wonder if you might
2 have an opportunity to see if there's another
3 correlation. If you have a state, for example,
4 where it is difficult to enroll physicians in its
5 Medicaid program, would that also be a
6 contributing factor to the kind of outcome you've
7 described?

8 MS. TAYLOR: Well, I have not seen a
9 study that links difficulty finding physicians to
10 participate in Medicaid with avoidable
11 hospitalizations.

12 But the larger issue that the
13 difficulty of enrolling physicians leads to
14 inadequate care or problems with access to care, I
15 think nobody would disagree with in the room.

16 MR. LERNER: Ruth?

17 MS. ROTHSTEIN: What are the "also"
18 factors in the use of ERs? And there's a whole
19 question of a cultural -- having always gone, yet
20 there could be a clinic ten blocks from there or
21 seven blocks, or one even near their home, near
22 the home of some of the patients.

23 Fear of going into the clinic, a
24 whole cultural understanding of where you get your

1 care. It's easier to go to an ER. You're going
2 to be accepted even if you sit there for twelve
3 hours. So I think that's a factor as well.

4 MS. TAYLOR: It is. I don't have a
5 slide for it, but one of the things we look at in
6 the report is growth in ER visits over time as a
7 -- again, a possible indication. Not the problems
8 with access.

9 Some of the criteria you
10 mentioned fall into our category of personal
11 theory, which is a perfect segue.

12 So we touched briefly on
13 utilization and outcome measures that might
14 indicate problems with access. These are some of
15 the barriers to healthcare access that I think you
16 might have spent quite a bit of time talking about
17 in this room.

18 Probably the most common one
19 being financial barriers to healthcare access,
20 which could result from having a low income. It
21 could be because you're uninsured and you don't
22 have any health covering the payments, or you
23 could be underinsured.

24 In addition to financial

1 barriers, there could be structural, which is the
2 point Ken made. Maybe there's too few providers.
3 There could be other ones, which I don't go into,
4 but to keep in mind and maybe have been mentioned
5 in presentations here.

6 This could also encompass
7 transportation barriers to getting to the clinic.
8 Physical -- that should say "physical." I
9 actually thought I corrected that. Physical
10 barriers if you're disabled.

11 Enrollment barriers. Maybe you
12 can't navigate the system and get into the
13 coverage for which you're eligible.

14 And lastly, there are what are
15 called personal barriers. And that's what you
16 were talking about, Ruth. And I'll talk about
17 that in a minute.

18 If there were one takeaway chart,
19 this would probably be it. This shows -- we have
20 mapped out whether or not -- wait. Let me start
21 again.

22 Thirteen percent of the
23 nonelderly residents in Illinois have avoided
24 going to the doctor due to costs in the past year.

1 And that's, again, about average.

2 You know, it's on par with the
3 United States average; however, the disparities by
4 income and whether or not you have a health plan,
5 those two big reasons for facing a financial
6 barrier care are enormous, as you can see from the
7 slide.

8 The Healthy People 2010 goal is
9 for, I think it's 7 percent. Yeah. It's for only
10 7 percent of the population. I'm not sure why
11 it's not zero, but 7 percent avoid going to the
12 doctor due to costs.

13 So basically, you know, if I call
14 nine a seven, and due to standard error, only
15 these two groups are reaching the Healthy People
16 2010 goal, those who both have a health plan and
17 have an income over \$35,000 a year. I figured out
18 what percent of the population that was for you.

19 Let's see. Well, no. Maybe I
20 didn't. Must be somewhere else.

21 But then look at how much this
22 changes. You know, we go from 8 percent avoiding
23 going to the doctor to 38 percent if you don't
24 have a health plan. And actually, these numbers

1 don't look quite right. I'll have to check these.
2 But these are about -- this is the right area.
3 I'm surprised this one is lower. I need to check
4 that one.

5 But you can see how much they
6 change as you go down in income.

7 MR. GELDER: Does Medicaid count as a
8 health plan?

9 MS. TAYLOR: Yes.

10 MR. GELDER: So that might be why
11 it's lower.

12 MS. TAYLOR: But again, this is just
13 adults. You're right. I think 6 percent of
14 adults are on Medicaid. This is from the BIRPAS
15 data. They simply ask do you have a health plan
16 or not.

17 So what we just saw at every
18 income level, health insurance eases the financial
19 barriers to accessing care, but it does not
20 eliminate that barrier, okay?

21 Oh, here's what I was looking
22 for. That group that met the Healthy People 2010
23 target of 7 percent. If I include that 9 percent,
24 still it's 62 percent of the nonelderly

1 population. So 38 percent of your population
2 aren't meeting that Healthy People 2010 goal.
3 Only 7 percent of the population avoid going to
4 the doctor due to costs.

5 And I think this is key. You can
6 have health insurance and still face financial
7 barriers to care. I don't want anyone to miss
8 that point.

9 So who has health insurance?
10 well, about 60 percent of your population are
11 uninsured. And if you have coverage, you almost
12 -- you are very likely to have private coverage
13 probably from your employer. But a few people
14 have nongroup or individual coverage.

15 And again, this is the under-65
16 population, so you don't see very much Medicare in
17 there. And about 8 percent have public coverage.

18 These are from the CPS. And you
19 have probably heard some testimony in here that
20 exactly how many people are uninsured varies
21 depending on what source you're looking at. So
22 consider these estimates, particularly when you
23 look at the percent of uninsured and the percent
24 in Medicaid. Probably the high end, because

1 that's where CPS falls on this range of uninsured
2 estimates.

3 So what do the uninsured people
4 look like? well, now the children estimate is the
5 most subject to variation because they are most
6 affected by the Medicaid undercount, so this would
7 be the high end of the -- what children represent
8 as a percent of uninsured.

9 But for working purposes, let's
10 say 21 percent are children. But of the adults, a
11 significant portion are full-time workers. Just
12 over 20 percent are workers in small firms, if I
13 include the part-timers.

14 A significant number, about 23
15 percent are part-time workers, which is important
16 if you're thinking about employer-based options
17 for coverage because sometimes part-timers aren't
18 typically eligible for employer-based coverage.

19 And some are unemployed and some
20 are in the labor force. But they're looking for
21 work. They're not working right now. So this
22 gives you a sense of how they're distributed.

23 I'm not going to show you a lot
24 of slides about the uninsured. The take-away here

1 is that it's a diverse group. It encompasses
2 every income level. Encompasses every age, every
3 educational level. All family types. That's the
4 important thing.

5 If you're uninsured, you are
6 one-quarter as likely to have the usual source of
7 care as somebody who is insured, getting back to
8 that important statistic. In other words, people
9 who are insured are four times as likely to have a
10 usual source of care.

11 The people who are uninsured are
12 very likely to incur medical debt. To go back to
13 the emergency room, for example, many people are
14 afraid to go to the emergency room because they
15 already owe the emergency room a lot of money and
16 they don't want to increase that debt. It's just
17 an unmanageable level of debt.

18 Because of the financial barriers
19 that they face, this has been well-documented by
20 The Institute of Medicine. They consume less
21 care. They're at high risk for complications and
22 early death. I think you've all seen these
23 different statistics for uninsured.

24 MS. ROTHSTEIN: Yeah, but they

1 wouldn't be true for the County, because they
2 would be afraid to come back. wouldn't be true of
3 County Hospital emergency room.

4 MR. CARVALHO: Ruth, I was covering
5 the uninsured week event. And the witness in the
6 audience said she wasn't going to get her care
7 because she had a \$600 bill. This was like three
8 years ago. I said, "Where did you get it?" She
9 said Oak Forest.

10 I explained to her it that it
11 could be wiped out. She just didn't realize it.
12 So there may be people who are afraid, but they
13 don't have reason to be afraid.

14 MS. TAYLOR: Navigating the health
15 system is very tricky. I'm sure there's very few
16 people out there with perfect information about
17 it. what their financial exposure is to them to
18 visit a healthcare provider.

19 when we think about the
20 uninsured, it's important to remember that many
21 spells of uninsurance are very short. And when we
22 look at a number like CPS, what they're asking the
23 survey respondent is, were you uninsured all of
24 last year? But researchers conventionally believe

1 the question they're answering is are you
2 uninsured now. So that's called a point-in-time
3 estimate.

4 A point-in-time estimate will
5 miss somebody like person B, who was uninsured
6 earlier in the year, but is insured now.
7 Presumably the Task Force cares about both types
8 of people. People who experience any uninsurance
9 in the past year. So that's just something to
10 keep in mind.

11 One researcher estimated that if
12 you look at the population who had a spell of
13 uninsurance in the previous two years, that would
14 represent one-third of the nonelderly Illinois
15 population.

16 Diane did some research on this.
17 She looked at people who were newly insured and
18 how long their spell of uninsurance was. And I
19 think 50 percent who were newly uninsured had a
20 spell of less than six months, does that sound
21 right? So, again, something to keep in mind as
22 you think about strategies to ensure access.

23 The Health Care Justice Act
24 specifically speaks to the problem of

1 underinsurance. It's difficult to measure the
2 prevalence of underinsurancce, but there's a
3 national study that thinks that about 12 percent
4 of privately insured adults are underinsured.

5 So if we adapt that statistic to
6 Illinois -- do you have a question?

7 REPRESENTATIVE COULSON: To me the
8 key question for that previous slide is why were
9 they uninsured for those previous short periods of
10 time? Did anybody ask those questions?

11 MS. TAYLOR: Well, there's a national
12 survey that can get at that, and we could -- but I
13 cannot see anything specific to Illinois unless
14 that survey --

15 MS. RUCINSKI: We asked about that.
16 And it's primarily loss of employment.

17 REPRESENTATIVE COULSON: And they
18 pick it up when they get reemployed?

19 MS. RUCINSKI: Sometimes there's a
20 waiting period.

21 REPRESENTATIVE COULSON: For us as a
22 task force, we really need to answer that question
23 because if we're trying to look at access, we kind
24 of need to have that information.

1 MS. TAYLOR: Well, that's my
2 understanding as well. It's primarily related to
3 employment.

4 MR. DUFFETT: I believe a 2004 study,
5 I'm not sure if it's on our individual web site,
6 that Families USA did, they not only looked at
7 people who were uninsured, but I believe there
8 were reasons on why that increased on that third
9 happening.

10 Some, as you said Diane, too,
11 people were in between jobs. Also many employment
12 areas you have to be there for three months before
13 you can get onto health insurance. But that could
14 be on the overall web site that we all have access
15 to.

16 MR. LERNER: I'm smiling because if
17 Quentin were here, he would say the answer to your
18 question would only be relevant if we're going to
19 be dependent upon employer-sponsored health plans.

20 REPRESENTATIVE COULSON: No, it's
21 not, because depending on how we're doing it. If
22 we're going Quentin's way, you're right. But if
23 we're going any other way --

24 MR. LERNER: I understand.

1 REPRESENTATIVE COULSON: We need to
2 have some idea of why they're uninsured.

3 MR. LERNER: When Quentin gets back,
4 you just tell him that I said that. That's all.

5 All I'm saying is there's lots of
6 different ways to the end point.

7 MS. TAYLOR: And if you see the
8 wedges of pie that was the full-time uninsured
9 workers, especially if they're in the larger firm,
10 a lot of those people are in the circumstance that
11 Diane mentioned where they're in the waiting
12 period for their coverage.

13 MS. RUCINSKI: Or they're not
14 eligible -- or they're ineligible for coverage.
15 There are, in the report that I did in 2001 -- and
16 I think the Task Force has that.

17 We also looked at whether or not
18 people working in a similar position had access to
19 coverage, and also for other positions. And it
20 is, in fact, true that even people working for
21 large employers, sometimes are not offered health
22 insurance.

23 MS. TAYLOR: That's rare for
24 full-time. I think it's very common for

1 part-time.

2 MS. RUCINSKI: It's not unheard of.
3 So yes, you're right.

4 MS. TAYLOR: For over 25 full-time
5 becomes not too common.

6 MS. RUCINSKI: But it is possible.

7 MR. LERNER: Keep going.

8 MS. TAYLOR: So anyway, this would be
9 -- this is about half of the uninsured population,
10 so it's a big number.

11 All right. Employer coverage.
12 When you have employer coverage, you do have
13 pretty good financial access to healthcare with a
14 caveat. But this insurance with employer coverage
15 is how much the premiums are going up.

16 This is the employees'
17 contribution to the premium for Illinois
18 private-sector employees. And this is the average
19 weekly wage, which includes people both insured
20 and uninsured. But you can see, you know, since
21 1999 it's gone up by almost a hundred percent, and
22 this is the big concern.

23 MR. SMITH: This is the percent of
24 increase, not the percent of the premium they're

1 paying?

2 MS. TAYLOR: Right. This is the rate
3 of increase. This is the cumulative increase in
4 what the employee has to pay. The graph for the
5 employer would look almost the same because the
6 share that -- of the premium paid by the employee
7 stayed roughly the same.

8 MR. SMITH: What's the source of this
9 data?

10 MS. TAYLOR: The Medical Expenditure
11 Panel of survey insurance components, which
12 surveys private-sector employers.

13 MR. KOEHLER: Does that also include
14 self-insured?

15 MS. TAYLOR: Including self-insured.

16 MR. BACKS: In this data, what has
17 happened to the amount the employer identifies as
18 the employer contribution during that period of
19 time, has it gone up also?

20 MR. LERNER: She said tracking is
21 about the same.

22 MS. TAYLOR: Yeah. The total premium
23 line and the employer share line and the employee
24 share line all look about the same because the

1 share, the split -- the single -- the employees'
2 contribution to single coverage has been about 17
3 to 18 percent of the total premium all these
4 years.

5 MR. BACKS: So the percentage really
6 hasn't changed?

7 MS. TAYLOR: Right.

8 MR. BACKS: In reality, though, it's
9 all coming out of employees' compensation anyway.

10 MS. TAYLOR: Economists would say so.

11 MR. BACKS: Well, this is all
12 economics, so why are we even talking about this
13 as being an employees' contribution versus
14 employers contribution, when its all the cost of
15 employing an employee. That's it. I mean to --

16 MS. TAYLOR: The weekly wage -- I
17 would have to inflate -- if I included the
18 employers contribution, if I viewed it as wages, I
19 would have had to include it in the weekly wage
20 line.

21 MR. BACKS: Not in terms of taxation,
22 that's the difference. But in terms of total
23 costs of employing someone, that is in the -- if
24 you're making a decision to add somebody to the

1 payroll and you're a smart businessman or woman,
2 you're supposed to figure the cost of benefits for
3 that person as well. And it doesn't really make
4 any sense for us to sit here talking about it as
5 if they're coming out of different universes.
6 They're all coming out of that cost of employment.

7 MR. LERNER: Well, not quite, because
8 the employer gets a deduction, and there's some
9 other issues.

10 But you're generally -- if you
11 would do a compensation analysis that went total
12 cash versus total comp, or total comp includes the
13 value of the benefits that you're talking about,
14 then you're absolutely correct.

15 MR. BACKS: That's my point.

16 MR. LERNER: Because then we're
17 looking at how do you use disposable income and
18 how do you make those decisions.

19 what the employer gets from the
20 commerce point of view is a deduction and all
21 kinds of tax treatment, which we can get into that
22 as well.

23 MR. BACKS: But the reason part of
24 this is important is during that Cobra period, if

1 they lose employment, the employee sees the entire
2 cost of their insurance for themselves and their
3 employer, which is why they're given the
4 impression Cobra payments are inflated when they
5 lose. It's all been money coming out of your
6 compensation all along.

7 MR. LERNER: That's why Lynn is
8 correct by saying it's -- the percentage of
9 premium contributions is tracking similarly
10 because it's the premium itself that's tracking at
11 a certain rate. That's just how you split it.
12 Niva?

13 DR. LUBIN-JOHNSON: It's 3:15 and
14 we're halfway through this presentation. I'm just
15 wondering if we've got enough time to hear the
16 rest of it knowing we've got some other things to
17 talk about?

18 And with all due respect, Lynn, I
19 know you guys came in late in the game, but most
20 of this we've heard before several times.

21 MS. TAYLOR: I know you have. Well,
22 maybe -- I would not disagree that talking about
23 the evaluation criteria is the more important job.
24 Should we just move over?

1 MR. CARVALHO: Well, let me remind
2 everybody what I think Lynn said at the beginning
3 was there's a major lengthy report on this
4 subject. It was the first significant deliverable
5 under the contract. This is their delivery of
6 that deliverable.

7 Her presentation today was a
8 summary of that report. That report will be sent
9 to you soon, but this was just to give you a
10 framework in which then to read a long, lengthy
11 document. So shortening this presentation just
12 gives you more homework at the back end which you
13 can do on your own time.

14 MS. DAVID: The only thing I want to
15 say, Wayne, is this piece on provider supply, I
16 think that you really have to speak on that
17 because that was a significant issue when we had
18 the hearings.

19 MR. LERNER: Well, what's your
20 pleasure? Do you want to cram through these
21 slides real fast -- no, you don't want to take
22 any -- it's up to you. What do you want to do?
23 I've not seen this before.

24 MS. DAKER: I have to leave in 30

1 minutes.

2 MR. LERNER: Let's do this. Let's
3 hold this portion. Let's talk about the
4 evaluation criteria. And to the extent that this
5 study played into the evaluation criteria, you can
6 kind of lay that out for us.

7 MS. TAYLOR: Sure. I think that's a
8 good plan.

9 MR. LERNER: Okay. This means more
10 homework for all of us. I think you're right. I
11 think if we had gone through this, we'd have spent
12 two hours on this, because this is really meaty
13 good stuff. Then I would have ordered breakfast.

14 MS. SRECKOVICH: First of all, there
15 was some questions that were raised at the last
16 meeting, and we provided responses to those. And
17 again, I'm not going to go through those, unless
18 you'd like me to.

19 If you have specific questions,
20 we can certainly address those. Or if you have
21 other specific questions that I can answer via
22 e-mail, just feel free.

23 MR. LERNER: I thought your responses
24 to the questions were quite good. Thank you very

1 much.

2 MS. SREVKOVICH: You're welcome. We
3 also sent out to you a revised interest matrix,
4 and this basically reflects each of the proposals
5 -- each of the proposer's proposals with regards
6 to how they respond to the specific interests that
7 were raised by this group.

8 And I want to add that we will
9 continue to -- for anybody here who wants to
10 continue to comment, provide additional
11 information about your proposals, we'll certainly
12 continue to take those into account.

13 My assumption is that now that
14 everybody has seen the evaluation criteria, there
15 might be some additional comments you'd like to
16 make.

17 I think the one -- if you are a
18 proposer who submitted information to us in a
19 proposal, and if you have submitted additional
20 information that is not reflected in the matrix,
21 it's because we really could not determine from
22 your response that that particular feature was
23 included in the proposal. So that suggests that
24 we need some additional, more specific information

1 from you other than to say yes, the proposal
2 addressed that interest.

3 Okay. Getting on to the
4 evaluation criteria then, I think this will be a
5 very, very important part of our evaluation in the
6 next several weeks.

7 What we attempted to do, first of
8 all, was to take into account all of the interests
9 that were expressed by this group. And I
10 attempted to categorize those into some major
11 categories of criterias.

12 So for example, the number-one
13 criteria, obviously, very easy access. We've got
14 financing, benefits, implementation, quality,
15 prevention, cost efficiency.

16 The availability of financing for
17 resources and planning. Consumer and stakeholder
18 participation. Consumer autonomy, provider
19 autonomy and provider payments.

20 And then what we attempted to do
21 was take all of the interests and group those into
22 these major categories. And where there are
23 obviously a lot of interests expressed, then that
24 particular criteria may have received an

1 additional weight.

2 We also created a weighting for
3 criterias based on what other states and other
4 programs have done in evaluating their programs.

5 I'll say that this weighting
6 process that we established is really very
7 subjective. And we are looking for input from
8 you. I don't know that had all of us gotten
9 together to do this again, whether we'd come up
10 with the same weighting criteria. I think we're
11 in the ballpark in terms of the relative
12 importance of certain features.

13 We know, for example, that if
14 there's not a good implementation plan, that
15 states have not been able to implement their
16 programs. If there's not clear financing and
17 support for that financing defined in the
18 proposals, that we certainly have seen states not
19 being able to implement those.

20 So this whole process was based
21 on your own interests expressed here, as well as
22 what has worked, what has been successful in other
23 states. And as well as the results of different
24 studies with regard to access to services in

1 Illinois.

2 MR. LERNER: So if I go to attachment
3 B, which is a summary of all that, the weighting
4 is what you said came out of -- I'm repeating it
5 back to make sure I got it.

6 The weighting came out of the
7 interest that we expressed through our exercise,
8 plus your experience from the other states, is
9 what I heard you say?

10 MS. SRECKOVICH: Yes, that's correct.

11 MR. LERNER: And where did the points
12 come from?

13 MS. SRECKOVICH: The points are --
14 let me add one thing to the process that we used
15 to establish the weight.

16 If you have expressed a specific
17 interest that you don't see represented in the
18 chart, it's because we, again, made some
19 assumptions about what criteria that particular
20 interest rests in.

21 So, for example, if somebody
22 talked about prevention, it's very easy to figure
23 out what criteria should go in. Some were less
24 obvious.

1 At the very end of the process,
2 we ended up with six -- six interests that we
3 believe are not represented in here, so we're
4 thinking that at the very end of our evaluation,
5 we'll have a separate category that will say other
6 considerations, and we'll address those as well
7 because they have been addressed in the interest
8 matrix, so it's not as though they've disappeared.

9 In terms of assigning the points,
10 again, this is a very subjective --

11 MR. DUFFETT: I was going to say,
12 what percentage up here -- or did you analyze this
13 on the legislation in terms of what the
14 legislation calls for.

15 I mean, I sensed, just looking at
16 it quickly last night, that there's a lot of
17 overlap in terms of the interests that went there,
18 but I didn't know if you also then did a filter
19 process to see that the things that the
20 legislation calls for, are they also in here as
21 criteria?

22 MS. SRECKOVICH: Yes. That was our
23 first check process, to make sure everything that
24 was in the legislation is reflected in here.

1 I think in some areas you might
2 say -- for example, long-term care. There's quite
3 a bit written in the legislation about long-term
4 care. We felt that that was adequately
5 represented in the criteria that says "Benefits, "
6 but that's something we might want to think about.

7 If that's particularly important
8 to this group and there needs to be a separate
9 criteria for inclusion of long-term care services,
10 then we can certainly -- we can do that.

11 MS. PRINTEN: May I ask a question?
12 I'm a little confused, because when we went
13 through the process of expressing our interests --
14 I thought we were going to narrow it down. My
15 understanding is whatever came after the interests
16 -- I can't remember what they're called. I
17 believe the negotiation options.

18 I mean, that's what I would think
19 these criteria would be drawn from, are the
20 options, not the interests. My understanding was
21 the interest was just sort of a brainstorming. I
22 mean --

23 MR. KOEHLER: I think the interests
24 is right. Options are how you get there,

1 interests are what you want.

2 MS. PRINTEN: But it was presented to
3 us in a way that these are not necessarily --

4 MR. KOEHLER: Presented in a way that
5 there shouldn't be evaluation by the group in
6 vetting, you know, expressing our interests.

7 MR. LERNER: What David said, the
8 step we didn't take, because we didn't have the
9 time to do it. So if we would have had another
10 time period, another meeting, we would have put
11 all 87 or 98 interests up. We would have all been
12 given ten votes or some number of votes.

13 We would have voted them. Those
14 would then have come out to be a weighting, so
15 what we're going to have to do is work backwards
16 to see if we can get at some of that same
17 weighting, which is what they're helping us
18 through. That's the step I think we're missing.

19 MR. KOEHLER: Yeah. But I think one
20 of the points you make though, if you start with
21 the matrix of what the legislation calls for and
22 take and put with it what we have said as
23 interests and used those two things, it should get
24 us pretty close even though we didn't go through

1 that process ourselves.

2 I'm guessing that this probably,
3 even though it's interest-based, it also is a bit
4 option-based as well. Because our options related
5 to our interests. We said this is what we want,
6 this is how we get there. So those two things
7 really have to, in a sense, kind of dovetail.

8 MR. BACKS: We have something in
9 front of us, so are we ready to react to it,
10 regardless of how we got there?

11 MR. LERNER: Not quite. I still
12 haven't heard the answer to the points, so if
13 there's some qualifying questions, we have to get
14 them. Ken?

15 MR. ROBBINS: If I'm asking this at
16 the wrong point, I'd certainly be happy to wake
17 up.

18 I'm still not sure I have a clear
19 sense of what -- how the weightings were arrived
20 at.

21 If, for example, you had a very
22 important matter when we did our interests
23 conversation. And everybody saw that the first
24 person said that's important. I think that's

1 important, too, but I'm not going to repeat it, so
2 I'm going to say something else. We went around
3 the room several times to elicit that.

4 Somebody looking at that list
5 would say well, that important thing was mentioned
6 once. It must not be that important.

7 MS. SRECKOVICH: I can answer that.
8 For example, this is -- and this is, again, based
9 on our experience in looking what other states
10 have done in terms of evaluating their options.

11 This goes back -- this whole
12 process of evaluating options, we looked back for
13 20 years because these kind of commissions have
14 been around for 20 years evaluating this.

15 For example -- a good example is
16 financing. You know, not -- hardly anybody
17 mentioned financing, except I think there was one
18 that said no smoking mirrors, inequitably
19 financed, those kind of things.

20 We know that that is just a very,
21 very important criteria that other states have had
22 to address in their programs. We know that's been
23 the make-it-or-break-it kind of criteria for some
24 other programs, so we've weighted that heavy.

1 One that we may not have weighted
2 quite as heavily, but because there was so much
3 interest expressed in it and we talked about it
4 again today, was the area of prevention. That
5 would generally be included under benefits and
6 some of the other states' criteria.

7 Is there a complete benefits
8 package? Is there a benefits package that
9 includes preventive service, so we gave that some
10 additional weight.

11 MR. ROBBINS: So these are merely --
12 these are your subjective calculations of what you
13 think our interests are?

14 MS. SRECKOVICH: Yes. It's a
15 combination of our subjective assessment of where
16 you think -- where we believed your interests were
17 expressed, as well as the criteria that have been
18 used in other programs to evaluate --

19 MR. ROBBINS: That seems to me to be
20 a pretty thin reed upon which to carry the weight
21 of what we actually think these weight things
22 ought to be.

23 Whenever the right time is to
24 come to the question of whether I agree or

1 disagree with any particular weight, I can't wait
2 to get there, but at least to set the stage, I
3 find this to be a pretty flimsy kind of reed to
4 bear all of that weight.

5 MR. KOEHLER: Let me -- I think that
6 actually, as this is unfolding, it's kind of how I
7 envisioned it, at least. That we would, as a
8 group, discuss what our interests are, then go
9 into not only talking about what we want, but how
10 we thought we might get there.

11 But the fact that our
12 consultants, Katherine, and the others were able
13 to listen to that conversation and to hear how we
14 discussed those things, even though only one thing
15 went on the wall or whatever.

16 I think, you know, by other
17 discussions and by how we've discussed this issue
18 in the past, kind of what we feel about it. It's
19 not as if they took a written report and said
20 okay, here it is, and we're going to attach this
21 to it.

22 So I think that's been kind of a
23 give and take. You know, still we may have some
24 overview points on it. And if that's what you're

1 talking about, I think that's perfectly valid.

2 But I don't think that this has
3 gone awry at this point because, you know, the
4 reason we hired these folks in the first place is
5 because they have some expertise and they've been
6 around the block on this thing.

7 And we bring our individual
8 perspectives into it as well. So it becomes kind
9 of a marriage, at this point, of the best of what
10 we all have to bring to the table.

11 MS. SRECKOVICH: Yeah. We didn't
12 propose these are the suggestions that everybody
13 would vote on it and say yes, that's fine, go
14 ahead.

15 What we wanted to do was present
16 this with some tentative weighting and have you
17 all engage in the discussions about whether those
18 weights are appropriate or how they need to be
19 changed or if we need to include it in some
20 criteria.

21 We had actually also come up with
22 a template where we said we were not going to
23 assign weights. We're going to just try to do
24 this in a very subjective process. Then as a

1 group we said no, that's not going to work very
2 well because we have to put some form and
3 substance to the evaluation.

4 So we're definitely looking for
5 you all to make recommendations on how these
6 weights should be changed.

7 MR. LERNER: Jan, did you have a
8 question?

9 MS. DAKER: I did, but it has to do
10 with the weight of something and we evidently
11 didn't get there yet.

12 MR. LERNER: Can you explain also the
13 points, so we can make heat of the whole thing,
14 then step back and see where we want to go?

15 MS. SRECKOVICH: Yes. This does come
16 from the review of the options that have been
17 presented to us.

18 In some cases it was very easy to
19 determine whether or not an option met a specific
20 interest or criteria. Yes, no. And so in those
21 cases, we said okay, we're going to assign a point
22 of one to go. Either the proposal has that
23 feature or it doesn't have that feature.

24 In some cases, though, it was

1 obvious, again, looking at all the options that
2 some proposals kind of addressed something and
3 other proposals addressed it completely.

4 So in that case, we gave a range
5 of points saying, for example, if the proposal is
6 very complete in how it's addressing a specific
7 feature, that would be three points.

8 If it addresses, for example,
9 administrative costs, but not as completely as
10 another proposal, then we were going to give that
11 two points. If it just moderately mentions it,
12 we're going to give it one. If it doesn't mention
13 it at all, we'll give it zero.

14 So we tried to create a more
15 differentiation for specific areas where we've
16 seen some of the proposals addressing that
17 specific criteria.

18 MR. LERNER: Was that also pretty
19 subjective?

20 MS. SRECKOVICH: Yes.

21 MR. LERNER: So it's a subjective
22 evaluation of the proposals that were going
23 forward?

24 MS. SRECKOVICH: Yes. Again, you

1 know, we want input on that as well to determine
2 if there are better ways or if you have other
3 suggestions on how we should use that point scheme
4 or some other point scheme.

5 MR. LERNER: Niva?

6 DR. LUBIN-JOHNSON: Didn't I read
7 somewhere that part of the criteria was going to
8 also use what you said, the plans from other
9 states, how these plans compare to plans from
10 other states?

11 I thought it would be in their
12 documents, our legislation, something, somewhere.
13 But that was going to be part of it. Dave is
14 nodding his head --

15 MR. KOEHLER: That was my
16 understanding.

17 DR. LUBIN-JOHNSON: So at least part
18 of that, I understood to be the case.

19 MS. SRECKOVICH: And you're right.
20 That's why we had this column, "Other
21 considerations" as well.

22 This is where we're going to
23 address some of the really much more subjective
24 kinds of features or proposals that can't be

1 appropriately weighted, perhaps. But we can
2 identify tradeoffs.

3 For example, you know, if
4 something has a zero in one and six in another, we
5 can highlight for you in a subjective analysis
6 that this resembles the Deargos plan, and here's
7 specific features of that plan. That even though
8 these features at present makes it more successful
9 than another approach.

10 So that's our ability -- that's
11 where we have some ability to provide the more
12 qualitative information.

13 MR. LERNER: Here's the problem. In
14 a half hour, another day or whatever it is, we're
15 not going to be able to rule on these evaluation
16 processes, plus half the Task Force is not here
17 right at the moment, so we need some time to
18 sponge this in.

19 We have a couple of different
20 ways. And remember, our starting point was we'd
21 like to be done by September 26th or whatever that
22 date is.

23 The question is, how would you
24 like to get to a point of being more comfortable

1 with the weighting and the point system, which
2 have to be in place before they can go do the
3 evaluation of the six models? I mean, you can't
4 put the other cart before that horse.

5 And so what we have to do is help
6 them get to this point so the evaluation process
7 is clean. That's really as I see it, the next
8 step.

9 MR. BACKS: I would like to comment
10 specifically on some of the proposal, so that you
11 can then go back and if the group agrees that some
12 of these comments or critiques, if you will, are
13 legitimate, that when we come back together again,
14 we actually have revisions that come closer to
15 where we think we ought to be.

16 It's hard to talk about without
17 getting specific, so if I might. Criteria one, it
18 says "Access." But everything from there on
19 refers to coverage.

20 And we have spent -- in all of
21 our deliberations and group presentations, there's
22 been a repeated theme that coverage does not
23 guarantee access if providers are not enrolled or
24 participating because of inadequate, low or slow

1 or both, payment, which struck me as a rather
2 ironic contrast to putting provider payment at
3 number 12 with a weighting of 2.5.

4 I don't know how it is in other
5 states, but if provider payment is not going to be
6 a significant issue, I'm going to have a real
7 problem defending this to the provider community.
8 I suspect other representatives of other provider
9 communities will have the same problem.

10 A possible solution is if you
11 really mean access, that provider compensation and
12 incentives to participate, if that's included in
13 access and weighted along with that, combine 1 and
14 12 and give it a 20, but include provider payment
15 in that access issue, then I think you'll be
16 getting someplace.

17 But I'm going to -- I saw red
18 when I saw provider payment as being relatively
19 insignificant. You'll have coverage but no
20 access. And if this is the Adequate Health Care
21 Coverage Act, we'd be okay. But since it's the
22 Access Act, then it's not.

23 MR. LERNER: Right. And that goes to
24 Margaret's point.

1 MS. DAVID: This is helpful to me.
2 And thank you, Craig. Because when Ken said it
3 was flimsy, I had a difficult time with that word
4 "flimsy," you know, because I just needed to see
5 examples of how we could help you to do it.

6 And so, Craig, this is -- if you
7 could continue, if you have anymore, this is
8 helpful to me because it gives me a way of helping
9 them to give us the evaluation criteria we need to
10 go forward.

11 MR. LERNER: We're getting to the
12 point we wanted to get to, and the question is how
13 do we get there?

14 Let me ask a procedural question.
15 I don't mean to be so crazy about the dates, but
16 I'd like to stay crazy about the dates for a
17 moment.

18 Would it make sense to take a
19 subgroup of the Task Force who would work offline
20 with you to massage through some of these
21 evaluative points, come up with some
22 clarification, then get it out to everybody well
23 in advance of the July meeting, the results of the
24 subcommittee, who would work with the consultants?

1 Then that summary would come out, right?

2 So that the July meeting -- we
3 still have to come in with some evaluation, so
4 we'd have to try to use Internet-based -- we'd
5 have to use Internet-based communication. Can't
6 do it, because of the Open Meetings Act?

7 We have to find some way. Let me
8 just finish. Find some way to take the subgroup's
9 work with the consultants, get it out to the Task
10 Force, get the Task Force to respond to it. That
11 will allow you still to have time to evaluate six
12 models, so we still get it in in enough time to
13 review it before the next meeting. That's what I
14 was trying to get at. I'm asking a procedural
15 question.

16 MR. BACKS: My position is this
17 meeting was scheduled to go from 10:30 to 4:30.
18 Everybody on the Task Force knew about the meeting
19 scheduled well in advance. And I have allowed,
20 and I think most of us have probably allowed
21 enough time to attend going up to about 4:30.

22 And we have 50 more minutes in
23 which the people who are here can react to this,
24 give that kind of input, rather than doing it

1 online or selecting from this group or selecting
2 it from people who are unable to attend today.
3 That's my position.

4 MR. LERNER: Jan?

5 MS. DAKER: Five more minutes that
6 I'm going to be here. I just wanted to mention
7 that I saw red when I saw prevention and wellness
8 weighted 5 points. That's not what we were after.
9 That's the most economical thing to go after is
10 prevention and wellness. It just seems very
11 strange.

12 MR. LERNER: I'm happy to take the
13 time until 4:30. I mean, makes no difference.

14 MR. BACKS: You warned us.

15 MR. LERNER: Because I want to make
16 sure I'm accommodating people. Niva?

17 DR. LUBIN-JOHNSON: When Jan leaves,
18 we will lose a quorum, okay? So when she leaves,
19 we won't be able to take a vote as to whether we
20 approve this or not, so we will probably end up
21 doing some part of what Wayne has suggested
22 anyway.

23 And let me say this. To avoid --
24 if the option is a subcommittee, to avoid

1 violating the Open Meetings Act, I believe we can
2 have a subcommittee which is no more than six
3 persons.

4 MR. CARVALHO: Actually, if you
5 create a subcommittee, then the Open Meetings Act
6 applies to the subcommittee. So if you have a
7 subcommittee of six, then four of them -- I mean,
8 no two -- more of those two can get together.

9 DR. LUBIN-JOHNSON: So then once it's
10 called a committee, they meet, then that's it.

11 MR. CARVALHO: There's a couple of
12 questions to what you said. One is do you want
13 the -- well, first off, the process of having a
14 weighting system and a point system.

15 And then do you want the process,
16 what each weight is to be something that is based
17 on a motion made and seconded and roll call taken,
18 or do you want to go around and give feedback,
19 listen to each other's feedback and ask the
20 consultants to react to that, incorporate it in
21 another draft, which then gets to the -- if that's
22 the case, which then gets to the next question,
23 which is if you then want to react to that as a
24 group before the consultants apply this to their

1 analysis, which is due to you in about three
2 weeks, then you need a meeting.

3 MS. ROTHSTEIN: It's not going to
4 work.

5 MR. LERNER: Ken?

6 MR. ROBBINS: I think I would be more
7 comfortable in appointing some subgroup that could
8 go over this at some level of detail, if for no
9 other reason than I only got this yesterday.

10 DR. LUBIN-JOHNSON: We all did.

11 MR. ROBBINS: Haven't had very much
12 time to carefully think my way through it. I
13 suspect that if others who aren't here had this in
14 advance, and thought it was important, maybe they
15 might have made adjustments to their schedule to
16 be here.

17 So I think it an important enough
18 issue that if you want to put enough time and
19 energy into this to make this a useful --

20 MR. LERNER: Right.

21 MR. ROBBINS: I agree it would make
22 sense to have a framework like this, but I think
23 it ought to be a framework that is approved by the
24 entire committee.

1 MS. ROTHSTEIN: I think if we stay
2 here 50 more minutes, and I'm willing to do it,
3 I'm not sure we'd complete the job.

4 MR. LERNER: Here's the other thing.
5 We said earlier on the steering committee if we
6 had to call a special meeting that's not scheduled
7 in order to get our business done to complete the
8 time line, we would. We would do that. So fair
9 warning. Sometime between July and August we may
10 have to do that.

11 MR. KOEHLER: Let me suggest that we
12 schedule a meeting, and actually just have it as a
13 committee as a whole. Maybe even try to get it
14 where we can have people phone in to listen to it.
15 I think this is very important stuff. I agree.

16 I wish we had started our day
17 with this, but we had a backlog and we had to do
18 that. But this is the real meat. This is the
19 nuts and bolts of what we're doing.

20 I'm looking at my calendar. The
21 11th is the next Tuesday between here and our
22 meeting in July. Again, if we can schedule a
23 special meeting and have people where they could
24 phone in if they can't be here.

1 MR. LERNER: 11th of what?

2 MR. KOEHLER: Of July. Because I
3 think we need the interaction, because we can all
4 think about this individually, but I need to play
5 off of what you all are thinking, what you're
6 saying.

7 MR. LERNER: So that between now and
8 the 11th of July, a subcommittee would be called
9 together, they would work with the consultants --

10 DR. LUBIN-JOHNSON: No, no.

11 MR. LERNER: Not even do a
12 subcommittee? Oh, that's an interesting idea.

13 MR. CARVALHO: One procedural
14 suggestion. If you're comfortable with your
15 steering committee process, if you call it as a
16 meeting of the steering committee, the only quorum
17 necessary is the steering committee.

18 All of you can come. All of you
19 can talk with your steering committee
20 representatives. Any of you can leave at any
21 time. Your quorum only disappears if three of
22 your steering committee members go away. If you
23 call it as a meeting of the whole group, you need
24 to have 15 people to have a quorum.

1 REPRESENTATIVE COULSON: Could I just
2 ask? This and the rest of what we're going to be
3 doing is the meat of what we're trying to do here.
4 I know a lot -- I've missed some of the other
5 things. We've gathered information.

6 But I'm just concerned that we're
7 so stuck on having this by September 26th when I
8 don't even know --

9 Let me ask you as a consultant,
10 if you have this done sometime around July 15th
11 and our meeting is July 24th, are you going to be
12 able to get the evaluations back to us in time?

13 MS. SRECKOVICH: Well, we had
14 anticipated having a preliminary evaluation that
15 was not, you know, a bells and whistles. Just
16 some very basic review.

17 We've done some of the review of
18 the proposals already in the interest matrix. And
19 so there's that.

20 Mathematics and our actuarial
21 consultant is already starting to develop the cost
22 of the models. So we recognize we're really going
23 to be hustling to get it done. Our biggest
24 concern, obviously, is you --

1 REPRESENTATIVE COULSON: So we'd have
2 less than a week to look at it.

3 MR. LERNER: Well, I expect if we had
4 a week, I'd be thrilled to have the week, at this
5 stage of the game.

6 MR. CARVALHO: The plan has been to
7 get the first cut a week before the meeting?

8 Now your point, Representative
9 Coulson is, if they get the weight the week before
10 they're supposed to get you the first cut, can
11 they do the job?

12 REPRESENTATIVE COULSON: And then the
13 final issue is then we're making decisions on a
14 partial evaluation, is that what --

15 MS. SRECKOVICH: No. We would
16 continue to work on the materials and continue to
17 circulate.

18 REPRESENTATIVE COULSON: So by
19 August, we'll have a full evaluation, but it won't
20 have been -- you see, I guess what I was thinking,
21 the July meeting was a meeting where we'd have
22 everything we can discuss.

23 MR. LERNER: The real key meeting is
24 August when the work that we would do between July

1 and August would have come to fruition and we'd
2 either agree on one model or not one model or some
3 hybrid model.

4 MR. BACKS: We've spent now about 45
5 minutes discussing the model. I would personally
6 feel comfortable delegating that after the
7 steering committee having heard that, with the
8 opportunity to attend the steering committee and
9 comment. And having the steering committee
10 actually make the decision what to go ahead with
11 after reviewing what the consultant comes back
12 with --

13 DR. LUBIN-JOHNSON: My only concern
14 with that is that, you know, as of today, one
15 member of the steering committee is facing some
16 serious family challenges. And so, if we're going
17 to do that, then we've got to make sure they're
18 going to be available to do that, or we have to
19 have some provision that allows someone to be in
20 that person's place.

21 MR. LERNER: Let's do this. I hear
22 you. Let's look at July 11th. We'll send out an
23 alert to people, tell them we're going to look at
24 scheduling something on July 11th. Either be the

1 full task force or the steering committee. The
2 steering committee is meeting after this anyway,
3 so we're going to finish it out.

4 My suggestion is as follows: Let
5 me see if I can make this quick. I think we take
6 as much time as we have got until 4:30, going
7 through this. To the extent you want to stick
8 around and talk about it, I want to stick around
9 and talk about it, give the consultant as much
10 information.

11 MS. SRECKOVICH: Is there any way to
12 do it on the 8th instead of the 11th, because then
13 we have the weekend? I mean, every day is really
14 critical.

15 MR. LERNER: The 8th is a Saturday --

16 MS. SRECKOVICH: Friday. Either
17 Friday or Thursday, because we really need as much
18 time as we can get.

19 MR. LERNER: First of all, do we need
20 an all-day meeting or do we need a half-day
21 meeting?

22 DR. LUBIN-JOHNSON: I was thinking
23 10:30 to 1:00, 10:30 to 2:00.

24 MS. SRECKOVICH: I'd like to leave

1 the meeting with the criteria, because I think if
2 there's any --

3 MR. LERNER: Leave which meeting?

4 MS. SRECKOVICH: I think if we leave
5 that meeting with you telling us do our best to
6 interpret what you said -- I think you all need to
7 make the decisions about tradeoffs and how you
8 want to assign those points.

9 MR. LERNER: You mean July 6th --
10 8th, I think.

11 DR. LUBIN-JOHNSON: The 7th is a
12 Friday.

13 MS. SRECKOVICH: Either the 6th or
14 7th.

15 MR. KOEHLER: Is there anybody who
16 can't come on the 7th? Anybody that can't come on
17 the 6th?

18 MR. LERNER: Can we do this by
19 conference call or whatever --

20 MR. KOEHLER: Can we do both in this
21 room?

22 MR. CARVALHO: We can do a conference
23 call in here. I'm speaking off the top of my head
24 now. I think there's a new state law that

1 requires that if you have a meeting that includes
2 attendance by phone, that half of the members have
3 to be present. So if it's a steering committee
4 meeting, at least as long as the steering
5 committee members are here.

6 MR. LERNER: What's your pleasure?
7 I've got to change my schedule no matter which day
8 you pick, so makes no difference to me. The 7th,
9 a Friday.

10 DR. LUBIN-JOHNSON: 10:30 to 1:00.
11 Two and a half hours enough time? 10:30 to 1:00,
12 then the steering committee needs an hour
13 afterwards. Then 1:00 to 2:00.

14 REPRESENTATIVE COULSON: Make sure
15 you have a quorum because I know I can't be here
16 the 7th.

17 MR. LERNER: Unless it's just the
18 steering committee.

19 DR. LUBIN-JOHNSON: So are we going
20 to send it out as a Task Force meeting, then
21 change it?

22 MR. CARVALHO: My suggestion is to
23 send it out as a steering committee meeting, so
24 that your quorum issues are taken care of, but

1 invite all Task Force members to be here.

2 MR. LERNER: Yeah. I know. And Joe
3 has got to be there. Diane?

4 MR. RUCINSKI: I know you based the
5 current weighting or the suggested preliminary
6 weighting on other states' experiences, and you
7 made the point that if you didn't have a good
8 implementation plan, then it didn't make a
9 difference.

10 And would you write up a brief
11 paragraph or something that talks about the states
12 that you looked at or how these weights in the
13 subjective process? Because I know you probably
14 -- there was a process you went through, so we
15 have a frame of reference how you came up with
16 that and what states have been effected in your
17 opinion.

18 DR. LUBIN-JOHNSON: I just have a
19 question about how this came about. And was this
20 total the consultants? Was just you all at
21 Navigant or was there any participation review or
22 comments from IDPH staff?

23 MR. CARVALHO: You know, it's funny,
24 about ten minutes ago I was going to make that

1 comment.

2 All the material that's
3 distributed to you always comes to us for review.
4 This particular one, I got ten minutes before our
5 conference call, or at least I looked at it ten
6 minutes before our conference call.

7 I looked at the gestalt of it and
8 said this is brilliant. Good work. But I don't
9 particularly care how any of the plans were rated,
10 so maybe I didn't look at the weights carefully.

11 So we made no changes to this.
12 Theirs is one percent pure --

13 DR. LUBIN-JOHNSON: This is a
14 conference call you had with the consultants?

15 MR. CARVALHO: Yes, we do that before
16 every one of your meetings.

17 MR. LERNER: I'm going to suggest
18 that for the sake of discussion, we got the word
19 out, Sara. We schedule the steering committee
20 meeting with attendance requested of the Task
21 Force members. I need to start at 11:00 o'clock
22 that day rather than 10:30.

23 And as far as I'm concerned,
24 we'll go to 11:00 to 2:00 or 2:30 or 3:00 o'clock.

1 It's your pleasure, but we've got to be done, all
2 right?

3 MR. KOEHLER: The train comes in at
4 10:00.

5 MR. LERNER: So you can start the
6 meeting for me. So 11:00 to 2:30 or 11:00 to
7 3:00. We'll figure out what we're going to do
8 about lunch, whether we eat before you show up.
9 But if we do eat, we'll be eating and working at
10 the same time. There'll be no break.

11 The idea is we'll take as much
12 time today as we have left for people who want to
13 stay and we'll finish it on the 7th. Is that the
14 deal? Everybody okay with that?

15 Okay. Back to the agenda.

16 MS. PRINTEN: I guess this ties in
17 with what Dr. Backs said. Talk about creating
18 incentives --

19 DR. LUBIN-JOHNSON: What number is
20 that?

21 MS. PRINTEN: Number five. It struck
22 me when he talked about creating incentives for
23 providers to adopt practices, when you put
24 provider payment as the last, you know, criteria

1 with the least weight, you're talking about a
2 punitive source of incentives.

3 And it seems to me that a better
4 way to do it would be to involve -- to increase
5 consumer autonomy up on the criteria list as well,
6 because I think physicians will -- and other
7 providers will probably respond better to their
8 patients being involved in their healthcare, and
9 that sort of relationship than they will to pay
10 for performance things that are slammed down on
11 them from top down. Does that make sense?

12 MR. LERNER: What are you suggesting?
13 I lost you.

14 MS. PRINTEN: To include -- I'm not
15 sure what I'm thinking.

16 To think about consumer autonomy
17 and provider autonomy and whether or not they
18 belong. They seem to me to have a lot to do with
19 quality and implementation of -- I mean --

20 MR. BACKS: Yeah. In terms of the nuts and
21 bolts of how to do that, I think what Tracy is
22 saying, and the way I would say it is that we are,
23 as providers, as physician/providers, we're rather
24 suspicious of anything that sounds like imposed

1 paper performance program or penalties for failure
2 to adhere to guidelines, those kind of things.

3 We'd like to see a
4 consumer-driven quality program where patients are
5 empowered with information and know what to ask
6 for and collaborate with their physicians.

7 So in essence it would be moving
8 -- I don't know so much as moving things up in the
9 ranking, but maybe it is taking some of the points
10 assigned in weighting to the top numbers and
11 moving the weighting down a little bit.

12 So instead of a 2 1/2 or consumer
13 autonomy, move it to a five and take 2 1/2 from
14 something else like financing or one of the other
15 areas.

16 MS. ROTHSTEIN: I think that under
17 financing, number 2, and number 7, number 6, are
18 really a combination of financing. Cost
19 efficiency. The availability of resources, so
20 that somehow you need to be able to couple those
21 and come up with a number that is appropriate for
22 all three of these things.

23 MR. LERNER: This could be
24 interesting. We start to do -- either be lumpers

1 or splitters. If we lump up enough things, it's
2 the Others Considerations column that gets longer
3 and longer every time we do it, which is fine.

4 MS. ROTHSTEIN: But it makes some
5 sense.

6 MR. LERNER: Can I ask a question?
7 The model for this in your mind, I kind of think
8 about things that enable something to be
9 successful. There are obstacles, things to be
10 successful. And you kind of think of this like an
11 algebra equation. This has to be in place before
12 this, before this, to the extent you can create a
13 linear relationship recognizing that nothing in
14 life is linear.

15 Have you kind of worked through a
16 model in your head of how does accessing,
17 financing and quality, which ones need to be
18 before the other, that then become an inherent
19 weight? Is there a model for this?

20 MS. SRECKOVICH: Actually, the first
21 draft that we did of this had them in order. As
22 you said, what you have to have in place first.
23 And it ended at implementation and ongoing
24 administration, I think we had as a separate

1 criteria.

2 Then we decided we'd better flop
3 them around, put the most important things you
4 wanted in terms of weighting. But, yeah, I think
5 there's some clear steps.

6 It starts with -- does start with
7 a benefit design. You know, work on the way down,
8 ongoing operations of the model.

9 MR. LERNER: Would you want people to
10 take this home and send you information or send
11 you critique between now and July 7th or whatever
12 it is?

13 MS. SRECKOVICH: Sure. What we could
14 do is take that information, compile it, get it
15 back to everybody before that day. You know,
16 rather than -- I think if we make all the changes
17 everybody wants, I think we'll end up with
18 something close to 500 percent.

19 But I think we can certainly take
20 comments, summarize those. Maybe even provide
21 some suggestion based on that without redoing the
22 scoring so you have an opportunity to do that.

23 MR. LERNER: Is that reasonable, Ken?

24 MR. ROBBINS: Yes.

1 MR. LERNER: I'm being sensitive to
2 the fact we all basically got this last night and
3 we need some time to think about it, think about
4 how we group it, what weighting to give to it.

5 MS. SRECKOVICH: If somebody else
6 sends us something -- everybody thinks the same
7 way, we won't have to have a meeting. I guess
8 we'll have to have a meeting, but it will
9 certainly make it a lot easier in terms of the
10 time.

11 MR. LERNER: So then could I ask
12 this? I'd like you to send this out again as an
13 e-mail with a notice that's called to meeting on
14 July 7th. And we'll work this through, Sara, at
15 the steering committee meeting. And to the extent
16 that you have a model that overlays this that
17 talks about that relationship, that you think may
18 be helpful to us.

19 If it doesn't confuse us more
20 than we're already confused, then don't bother.
21 But if you think it would be helpful. I mean,
22 thinking about causality and attribution is always
23 helpful to me as I think about policy design.

24 This may not be able to do that,

1 but at least give us some thought about that would
2 be helpful. That would then get you into
3 discussions like Craig raised, which is provider
4 participation and access and what's the
5 relationship between the two, or provider
6 participation and financing and what's the
7 relationship between the two. That's what I was
8 trying to get at.

9 MS. SRECKOVICH: I'll actually send
10 it out in a format that you all can edit so we can
11 take your scores or whatever.

12 MR. CARVALHO: Encourage everybody to
13 do two things. First, read through the back up to
14 the table because, you know, for example while on
15 first blush, the financing cost efficiency is very
16 similar. If you read through, financing is -- how
17 does this program get paid for. Cost efficiency
18 is what is the incentive on the provider community
19 and consumers to make sure that they're making
20 good, rational choices.

21 The other thing, the obvious
22 mathematical point that it still has to add up to
23 a hundred. So you probably need like the
24 congressional balanced budget idea; you really

1 can't propose that another number go up if you
2 can't propose another number goes down, otherwise
3 every number gets doubled.

4 MR. LERNER: If you try to vote more
5 than once, your vote's out. This is Chicago.

6 I've got to tell you something.
7 I think that the first pass read on this is a very
8 good piece of work. This is very complex stuff.

9 MR. BACKS: I think the process is a
10 good process. I think it's just hearing the input
11 and the weighting of the things is the things you
12 need to fine tune.

13 MR. LERNER: So here's the deal.
14 We're going to call a meeting for July 7th. The
15 steering committee will talk about the mechanics
16 of that after this meeting.

17 We'll get this back out in the
18 format that people can respond. We'll ask people
19 to respond between now and July 7th. July 7th,
20 the meeting will take place. Out of July 7th,
21 will hopefully come the evaluation methodology.

22 Then we're still going to try to
23 hold to our schedule with enough time to review
24 the responses before the meeting. Everybody okay

1 with that? Good.

2 It 4:00 o'clock. I'm right on
3 schedule. IDPH update?

4 MR. CARVALHO: Actually, this is just
5 a space filler to allow for the rest of the
6 schedule to go over. Since it didn't go over, I
7 don't really have any updates.

8 I was thinking of maybe updating
9 you on SHIP, but actually that was part of
10 Dr. Orgain's presentation, so you've already been
11 updated on that.

12 MR. LERNER: Okay. I will do other
13 business. I've got two pieces of other business.
14 Does anybody have any other business they want to
15 raise? Hearing none, we did receive -- I have
16 something on -- we really haven't seen before. On
17 the market for individuals in Illinois.

18 Beth has been at several of our
19 meetings for individuals and asked if she could
20 share this, and I neglected to do that, but this
21 is information about what an individual faces in
22 securing information in Illinois. Some of the
23 data on percentage of people who are in Illinois,
24 who participate as individuals in the healthcare

1 market, insurance market.

2 You've heard presentations over
3 the year on states that have particular methods of
4 underwriting, rate regulation, pre-existing
5 conditions, etcetera. And what Beth is presenting
6 here is what is the state of affairs in Illinois.

7 MS. NAJBERG: I think that covers a
8 lot of it. And where this fits together is how do
9 you -- the individuals who pay high premiums.
10 I've been trying to figure out how they get the
11 information about the breakdown of the
12 individuals.

13 Looking at the table in the
14 center, 623,000 people. What's the age range,
15 what's the average premium, and I haven't been
16 able to get that. So if anyone here can access
17 that information, I think that would be helpful.

18 I think the real impact of this
19 is when we're talking about the 1.790 million
20 uninsured. If we can move -- we're talking about
21 getting those uninsured into an insured group and
22 some of the barriers for the individual market.

23 And up on the top are some of the
24 restrictions that medical underwriting is allowed

1 without restrictions. So someone who applies for
2 an individual policy, if an underwriter is a
3 20-year-old -- and I've talked to them on the
4 phone -- who doesn't have experience and woke up
5 on the wrong side of the bed, you could be rated
6 up 20 to 75 percent. And there are no rate caps.

7 So with the present system, if
8 we're going to get uninsured to buy policies, we
9 haven't made much progress to get those into the
10 policy.

11 And the bottom is a sample of the
12 rate spread for an insurance -- an individual
13 policy that I looked at. How it jumps up to --
14 if you're over 50 years old, you jump up way over
15 three times the base premium that is in there.
16 That dotted line going across is three times
17 the base premium.

18 Most people immediately get rated
19 up the 20 to 75 percent, so that 314 is going to
20 go -- at 75 percent going to go way, way off the
21 chart.

22 So these are things to take into
23 consideration when we look at some of the pricing.
24 Any questions?

1 MR. LERNER: Thank you, Beth. We
2 appreciate that. We appreciate your diligence.

3 All right. Other issues real
4 quickly. We all received a copy of a letter
5 that's dated June 7th. Many of us did not get
6 this until recently, from Senator Halvorson and
7 Representative Flowers.

8 I would like to mention, for the
9 record, that each member of the Task Force
10 received this letter. That the Task Force
11 continues to engage -- has and continues to engage
12 in open, candid, and objective analysis of models
13 before us.

14 That part of the Task Force is to
15 debate and argue, then decide. And that's exactly
16 what we did. That we subsequently concluded that
17 we would review five models and allow the
18 consulting firm to come back and work with us on a
19 sixth hybrid model. And that is still the process
20 in place.

21 And we do accept the letter. We
22 enter it into the record. And I don't choose or
23 think that we should respond any further than
24 that, except to receive it and recognize that this

1 is part of the process. Any comments? Niva?

2 DR. LUBIN-JOHNSON: I'd just like to
3 know when it was received because it was dated
4 June 7th and we got it yesterday.

5 MR. CARVALHO: It was received by me
6 last Thursday. Joe Roberts forwarded it to me. I
7 forwarded it to Dr. Lerner, and asked whether he
8 thought we should distribute it to the Task Force
9 as a whole. He decided that we should. And it
10 got in the same e-mail transmission Elissa tried
11 to send out to you all on Friday, and I guess you
12 got it yesterday.

13 As far as I know, interestingly,
14 the governor's office never received it directly,
15 but Joe got ahold of it and sent to me or sent it
16 to Elissa on Thursday and she got it to me and I
17 then got it to Wayne, and he got it to you.

18 MR. LERNER: I received a copy from
19 Senator Watson as well, in a letter dated June
20 20th, so it hit about the same time I got the
21 e-mail. So clearly, we all got it at the end of
22 this process, okay? Other comments about that?

23 I have one personal comment to
24 make, and I do want this entered into the record.

1 As many of you know, if you've been reading the
2 papers, my picture was on the front page of the
3 business section not too long ago, which isn't bad
4 for a poor kid from the west side of Chicago, but
5 not the way I wanted it to play.

6 I did resign from the Rehab
7 Institute of Chicago. I did it because I'm the
8 person responsible for when staff members do bad
9 things. And I have a staff member who did bad
10 things. And I have to take responsibility for
11 that.

12 I had a great nine-year run at
13 the Institute and I love that place. I'm going to
14 be there through the end of summer. But as I told
15 David Carvalho and Dr. Whitaker, I choose not to
16 give up my role here, nor do I choose to give up
17 the chairmanship. So we're going to finish the
18 job we started.

19 If you have any questions about
20 any of this offline, I'll be glad to answer it.
21 But in the end, you've got to do the right things
22 for the right reasons. Do you have any questions?

23 MR. ROBBINS: I might question your
24 sanity, but I applaud it.

1 MR. LERNER: That was Ken Robbins
2 asking about my sanity. Are there any other items
3 before the Board?

4 MR. BACKS: Just to draw attention to
5 materials sent out to the e-mail. The AMA acted
6 as the annual meeting calling for an individual
7 mandate for individuals who have incomes greater
8 than 500 percent of FPL as a starting point.

9 And once the mechanisms are in
10 place for tax incentives and penalties for
11 procuring or not procuring individual insurance,
12 they're favorable to individual mandates, as well
13 as the end of a long-term process of moving toward
14 this mandate. And I think it dovetails pretty
15 nicely with what's happening in Massachusetts.
16 And what's timely for our discussions here.

17 Obviously, that is a national
18 organization policy. It is not directly
19 applicable in every way to every state. And ISMS
20 has yet to act specifically on our policy for
21 Illinois. It would obviously have some
22 implications on the insurance market and some of
23 the issues brought to us in the analysis in the
24 individual market.

1 But I wanted to call it to the
2 attention, that that is our profession's policy
3 based on the AMA.

4 MR. LERNER: Thank you. Any other
5 items?

6 MR. SHEFFEL: Dr. Lerner, if I could
7 make a comment? Joe Sheffel, S-h-e-f-f-e-l.

8 If you have advocates who are
9 willing to spend a day here at the meeting, then
10 there should be some process in place for us to
11 make comments, perhaps at the end or something.
12 So that perhaps if we have information you are not
13 aware of and would help the Task Force in doing
14 your job.

15 MR. LERNER: Thank you. Why don't we
16 talk about that at the steering committee meeting.
17 Thank you. Other items? Motion to adjourn.

18 DR. LUBIN-JOHNSON: So moved.

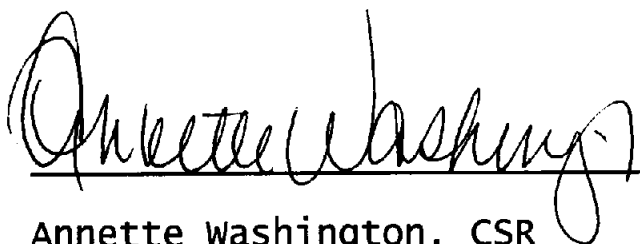

19 MR. LERNER: You're out of here.
20 Happy 4th of July.
