

# DANGER

# ULTRAVIOLET RADIATION

- Follow operator, tanning unit and safety instructions.
- Avoid too frequent or lengthy exposure. As with natural sunlight, exposure to a sunlamp may cause eye and skin injury, sunburn and allergic reactions. Repeated overexposure may cause chronic damage characterized by wrinkling, dryness, premature aging of the skin and skin cancer.
- Wear protective eyewear. **FAILURE TO USE PROTECTIVE EYEWEAR MAY RESULT IN SEVERE BURNS OR LONG-TERM INJURY TO THE EYES.**
- Abnormal or increased skin sensitivity or burning may be caused by certain foods, medications (including, but not limited to tranquilizers, diuretics, antibiotics, high blood pressure medication, birth control pills and skin creams), cosmetics or toiletries. Consult a physician or pharmacist before using a sunlamp if you are using prescription or non-prescription medications, have a history of skin problems, or believe yourself especially sensitive to sunlight. Pregnant women and women on birth control pills who use a tanning device may develop discolored skin.
- Ultraviolet radiation from sunlamps enhances the effects of the sun. Do not sunbathe before or after exposure to ultraviolet radiation.
- If you do not tan in the sun, you are unlikely to tan from the use of this product.
- Use of a tanning device may not provide a protective base in regards to sun exposure.
